FOREWORD

PURPOSE

This document presents the Ship Information Handbook for the 23.3 m New Generation Trawler. It identifies the ship equipment, the operational instructions and the main maintenance operations.
This manual describes a 23.3 m Trawler designed by Constructions Mécaniques de Normandie (CMN).

MANUAL ORGANIZATION

This maintenance book is structured in seven sections as follows:

SECTION 1 : GENERAL

SECTION 2 : GENERAL ARRANGEMENTS

SECTION 3 : SHIP EQUIPMENT LIST

SECTION 4 : SYSTEMS FUNCTIONAL DESCRIPTION

SECTION 5 : OPERATING INSTRUCTIONS

SECTION 6 : MAINTENANCE SCHEDULE

SECTION 7 : SCHEMATIC SYSTEMS DIAGRAMS

HOW TO USE THIS MANUAL

The Ship Information Handbook should be used in day-to-day operations and crew familiarization of the Trawler to locate and identify both general areas of the ship and specific equipment and systems.

- Use Section 1 for an overview of the ship.
- Use Section 2 to identify leading characteristics.
- Use Section 3 to identify equipment and systems throughout the ship and to find manufacturer's information and model types of system components.
- Use Section 4 for functional descriptions of specific equipment and systems.
- Use Section 5 for pre-operational checks and required procedures to operate and secure major equipment on the ship.
- Use Section 6 to find maintenance schedule of equipment on the ship.
- Use Section 7 schematic system diagrams to identify fluids and lubricants recommandations (i.e. hydraulic fluid, seawater, and potable water).

LIMITATIONS OF LIABILITY

The present Ship Information Book applies to CMN 23,3m Trawler.

The information supplied in the Ship Information Book is valid at the time of issuing.

Although great care has been taken to provide the best possible information, errors or omissions cannot be excluded.

If you have any doubt or suggestion, please contact CMN.

LIST OF ACRONYMS/ABBREVIATION USED

AC	Alternating Current
A/C	Air Conditioning
ADF	Automatic Direction Finder
Ah	Ampere/Hour
AIS	Automatic Identification System
BNWAS	Bridge Navigational Watch Alarm System
CD	Compact Disc
CPM	Control Panel Module
CPP	Controllable Pitch Propeller
DGPS	Differential Global Position System
DC	Direct Current
DN	Diameter Nominal
DVD	Digital Video Disk
ECDIS	Electronic Charting Digital Information System
EOS	Electro-Optical System
EPIRB	Emergency Position Indicator Radio Beacon
FM	Frequency Modulated
FPP	Fixed Pitch Propeller
Fwd	Forward
GMDSS	Global Maritime Distress and Safety System
GP	Generator Panel
GPS	Ground Positioning System
HF/SSB	High Frequency / Single Side Band
HP	Horsepower
HPU	Hydraulic Power Unit
HVAC	Heating, Ventilating and Air Conditioning
Hz	Hertz
IMM	International Maritime Mobile
kG	Kilogram
kvA	Kilovolt Ampere
kW	Kilowatt
LCD	Liquid Crystal Display
LED	Light-Emitting Diode
m	Meter

ME	Main Engine
MECS	Modular Electronic Control System
MEP	24 VDC Main Engine Panel
MF BLU	Moyenne Fréquence / Bande Laterale Unique
mm	Millimeter
NA	Not Applicable
NC	Not Codified
NiCad	Nickel Cadmium
NMEA	National Marine Electronics association
NUC	Not Under Command
OEM	Original Equipment Manufacturer
PH	Pilothouse
PMM	Maintenance Manual
Port	Portside
psi	Pounds per square inch
PTO	Power Take Off
RAM	Restricted Ability to Maneuver
RHIB	Rigid Hull Inflatable Boat
RPM	Revolutions per Minute
SART	Search And Rescue Radar Transponder
SEL	Ship Equipment List
SOLAS	Safety Of Life At Sea
Stbd	Starboard Side
SW	Sea Water
TBD	To be determined
V	Volt
VAC	Volts Alternating Current
VCR	Video Cassette Recorder
VDC	Volts Direct Current
VHF	Very High Frequency
VMS	Virtual Memory system
W	Watt

Fresh Water Tank - Area : 14 m²

Interline 925	Epoxy Coating for Tank	THA125/THA127	White RAL 9016	300

SAFETY INFORMATION

GENERAL SAFETY NOTICES

The following general safety notices supplement specific warnings and cautions appearing in manufacturers and suppliers manuals.
General precautions must be understood and applied during operation and maintenance.
The following general safety notices supplement specific warnings and cautions appearing elsewhere is this manual. General precautions must be understood and applied during operation and maintenance. The Captain or other authority will issue orders as deemed necessary for any situation not covered in the general and specific safety precautions.

FIRST AID

An injury, no matter how slight, should never go unattended. Always obtain first aid or medical attention immediately.

EQUIPMENT LOCKOUT/TAGOUT

Operating personnel shall turn off and disconnect the machinery or equipment from its energy source before performing service or maintenance and the authorized personnel either lock or tag the energy-isolating device to prevent the release of hazardous energy and take steps to verify that the energy has been isolated effectively.

DO NOT REPAIR OR ADJUST ALONE

Under no circumstance should any person reach into or enter equipment enclosures for the purpose of servicing or adjusting equipment except in the presence of personnel capable of rendering aid.

HIGH VOLTAGE PREVENTION

Never work alone with high voltage. Have a partner who knows how to disconnect the power and who knows Cardio Pulmonary Resuscitation. A healthy person can be easily restarted after electrocution. High voltages may not kill, but can cause dangerous currents to flow.
Rule of thumb: 1 mA (milli-Ampere, or 0.001 Amps) is startling, 10 mA is painful, 100 mA can cause the heart to go into fibrillation or stop. An old electrician's trick to avoid accidental passage of electricity through the heart is to work with one hand and keep the other hand in a pocket.

IN CASE OF ELECTROCUTION REMOVE THE POWER! Don't become an additional victim

Turn off or disconnect power source. If unable to reach a switch or plug, use an insulated tool such as a wooden broom handle or rolled up paper to separate the victim from the power source. If extremely high voltages are present, use only the best insulators, like a clean, dry PVC pipe. Check if the victim is conscious. If victim is unconscious check for breathing and pulse, administer Standard CPR if needed. Once consciousness is restored, check for burns. Administer Standard First Aid for burns.

KEEP AWAY FROM LIVE CIRCUITS

Operating personnel must observe all safety regulations at all times. Do not replace components, make adjustments or perform internal equipment maintenance without first securing electrical power.
Potentially dangerous current may still exist when the electrical power is in the "OFF" position because of charges retained by capacitors.
Before touching, always secure electrical power and discharge the circuit by shorting through a load to ground with a shorting probe.

ENERGIZED EQUIPMENT

Before working on energized equipment obtain Captain approval. Ensure personnel protective measures are taken to prevent grounding.
Energized equipment can be considered any component that has electrical, hydraulic or fluid power energy contained within, as well as, a high potential to transfer that energy from the component to another object.
Replacement or repair of components should be done only after the affected circuit has been secured, locked out and tagged out.
Replacement or repair of components with the circuit still energized may result in serious injury or death.
Take great care when working around energized electrical equipment.
Contact between unprotected body parts and electrical conductors can cause serious injury or death.
Do not wear jewelry or other conductive items while servicing energized electrical equipment.
Failure to comply with these precautions can cause serious injury or death.
Never work alone.

ROTATING AND RADIATING EQUIPMENT

Secure all rotating and radiating equipment prior to personnel going aloft to perform related maintenance items.
A safety watch shall be posted if equipment must be repaired/adjusted while in motion.
The safety watch must have a full view of the repair/adjustment operation and immediate access to controls that can stop the equipment in motion.

FUEL HANDLING

Fuel vapors are explosive.
Fuel is flammable.

Before fueling the tanks or transferring fuel, ensure that firefighting equipment is immediately available for use in case of fire emergency.
Do not smoke or allow smoking, or any other open flame in the vicinity of the fueling operation.
Wipe clean any fuel spillage and dispose of spilled fuel in accordance with the appropriate regulations.
Failure to comply can result in death or serious injury.

BATTERIES

Batteries are filled with a sulfuric acid based electrolyte.
This electrolyte is extremely corrosive to human tissues and many other materials.
If spilled electrolyte comes in contact with clothing or other material, wash the affected area with large volumes of fresh water.
If the electrolyte comes in contact with the skin, flush the area with large volumes of fresh water.
If the electrolyte comes in contact with the eyes, flush them with large volumes of fresh water.
Acids can be neutralized with SodiumBicarbonate, $NaHCO_3$, beware of possible violent chemical reaction.
Mixing strong acids and alkalis can cause violent chemical reactions.
Continue flushing the affected area until medical assistance arrives.
Failure to comply can result in death or serious injury.
Batteries produce hydrogen gas which is explosive.
Keep the work area free of sparks, open flame, and excessive heat.

OILS AND CLEANING SOLVENT

Do not allow hydraulic fluid, engine oil or cleaning solvents to come in contact with unprotected skin or eyes.
Prolonged skin contact can cause illness or injury.
Eye contact can cause serious injury.
Always wear chemical protective gloves and goggles when handling hydraulic fluid, engine oil and cleaning solvents.
Failure to comply can result in death or serious injury.
Cleaning solvents are flammable and their vapor is potentially combustible or explosive.
Do not use cleaning solvents in the vicinity of sparks, open flame or excessive heat.
Do not use cleaning solvents in unventilated spaces.
Failure to comply can result in death or serious injury.

CHAPTER 1 – SHIP CHARACTERISTICS

1-1. INTRODUCTION

1-1-1. Ship type and brief description

The ship is mainly used as a deep seaTrawler and as a pelagic Trawler.
The rate of use is about 250 days per year.
Each campaign lasts approximately 10 days.
The boat is designed and life saving appliances provided for in accordance with the requirements of the French Flag Authorities for operations in 2nd category of navigation (up to 200 miles from safe heaven and with maximum voyage distance of 600 miles).
The propulsive power is 559 kW.
The gross tonnage of the Trawler is about 195 UMS.

1-1-2. Hull shape

Hard-chine displacement hull.
The hull shape is designed to reduce the resistance and so the fuel consumption: a bulb improves the resistance (decreases the resistance) and pitch damping.
Two bilge keels are welded to the hull to reduce rolling amplitude.
Zinc anodes are located on the hull below the waterline to protect the underwater hull of electrolytic corrosion.

1-2. SHIP CHARACTERISTICS

The characteristics mentioned in this document can be slightly modified to allow possible improvements in the performances, the capacities or the construction of the ship.

1-2-1. Main Characteristics

Length overall	: 23.3 m
Length between perpendiculars	: 21.9 m
Breadth at deck level	: 8.0 m
Depth midships	: 4.0 m
Draught midships (approx.)	: 3.2 m
Maximum draught (stern draught)	: 3.5 m

1-2-2. Crew

Captain : 1
Crew : 7
Total : 8 men

1-2-3. Capacities

Fuel oil	: 34000 l
Fresh water	: 3000 l
Technical fresh water	: 12000 l
Provisions	: 12 days
Fish hold	: 650 boxes of 800 x 450 x 250 mm

1-2-4. Speed

The maximum free running speed of the ship is approximately 9.5 knots and is achieved in the following conditions:

- With medium load :
  - Full crew
  - 50% of fuel oil and new lube oil
  - 100% of water (ice + fresh water)
  - 50 % of fish in fish hold (12 t)
- Deep sea
- Sea state 2
- Wind speed < 10 knots
- Ambient temperature : 35°C
- Sea water temperature : 26°C

The propulsion is optimized for Trawling speed between 0,5 and 5,5 knots.

1-2-5. Range

The range is 10 days (with provisions for 12 days).

1-2-6. Manœuvrability

The ship is equipped with one rudder.
The rudder is actuated by a hydraulic steering gear.

1-3. RULES AND STANDARDS

1-3-1. Rules

The ship is compliant with the following rules:

- More particularly its divisions 110, 211, 214, 217, 219 & 226; as far as Rule in appendix to the French Flag Authority Decree dated 23/11/1987 and practicable for this type of ship
- IMO Global Maritime Distress Safety System (GMDSS A1 +A2)
- International Tonnage measurement regulations (1969)
- The ship is marked according to COLREG regulations

The structure is designed according to Bureau Veritas classification society rules.

1-3-2. Certificates

Magnetic compass deviation curve.
Stability and load line certificates.

1-3-3. Stability

The ship is divided in 5 watertight compartments (4 watertight bulkheads).

1-3-4. Applicable standards

All the equipments and the materials are in accordance with the applicable standards for this type of ship.

1-3-5. Quality insurance

CMN is certified ISO 9001 (V 2008) by the Bureau Veritas Quality International (BVQI).

Figure 1-12– Mast Arrangement

CHAPTER 2 – GENERAL ARRANGEMENT

2-1. GENERAL

The general arrangement of the ship is optimized for:

- The ergonomics at work for trawling activity
- Comfort (access to living areas)
- Security (the crew work station is located on the fishing deck)
- Hygiene of the product

The arrangement of the living area is optimized with regards to the movements of the Ship while respecting safety regulations

The 23,3-Meter Trawler is divided into five below deck compartments, one main deck, and an upper level wheelhouse. The below deck areas are arranged as follows:

- the forepeak
- the fish hold room
- the engine room
- the storage room
- the steering gear room.

The main deck houses, the crew quarters and sanitary at stbd side and the galley, mess, workshop and provisions store at portside.

The crew workstation is located on the central part of main deck (here under referred as “fishing deck”), reducing the risks for the crew in case of emergency situations.
The upper bridge includes a steering and main engine remote control console complete with necessary navigation and communication equipment.

The mast is built in aluminium alloy and receives aerials and navigation lights according to the COLREG regulations for a Trawler under 24 m in length.

2-2. STEERING GEAR ROOM

The steering gear room includes mainly the following equipment:

- Two hydraulic cylinders
- Two HPU
- Oil tank with emergency steering wheel
- Two electrical cabinets (one for each HPU)

2-3. STORAGE ROOM

The storage room includes mainly the following equipment:

- Fish hold and ice generator refrigerating unit
- Fwd stern tube of the propeller shaft
- Oil tank for Aft stern tube lubrication
- Two fishing gear distributors

2-4. ENGINE ROOM

The engine room includes mainly the following equipment:

- Main propulsion engine
- Reduction gearbox
- Shaft generator (driven by propulsion plant)
- Generator Set
- Fire pump
- Sea water cooling pump for fish hold and ice generator
- Oil tank for fishing gear
- Hydraulic Pump for fishing gear (driven by propulsion plant)
- Sea water cooling pump for HPU of fishing gear
- New and polluted oil tanks
- Two bilge pumps
- Two sea water strainers
- Oily water tank
- Fuel oil centrifugal separator
- Fuel oil transfer pump
- Fuel oil service tank
- Main electric switchboard
- Secondary electric switchboard
- Battery bank for ME starting
- Battery bank for Genset
- Fresh water pressure unit
- Sea water pressure unit

2-5. FISH HOLD

The fish hold room includes mainly the following equipment:

- Two cooling coils 3 x 1 m
- Two single cooling coils 2 x 1 m
- Two double cooling coils 2 x 1 m

2-6. SANITARY ROOM

The sanitary room includes mainly the following equipment:

- Gravity toilet
- Wash basin
- Shower tray
- Water heater

2-7. GALLEY / MESS

The galley mainly includes the following equipment:

- Sink
- Hot plate
- Cooker
- Fridge
- Hood
- Water heater

2-8. CREW'S QUARTERS

The Crew's Quarters mainly includes the following equipment:

- Seven bunks equipped with drawers
- Seven berths

2-9. WORKSHOP

The workshop includes mainly the following equipment:

- Lub. oil tank of Fwd stern tube
- Secondary switchboard
- Remote control panel for fire pump

2-10. CO2 LOCKER

The CO2 locker includes mainly the following equipment:

- Two CO2 Bottles
- Manual Release
- Pneumatic release
- Two FO quick closing valves actuators

2-11. FORE PEAK

The fore peak includes the following:

- Shelves to store various equipment
- Ice generator
- Fresh Water Feeding Pump

2-12. WHEELHOUSE

The wheelhouse mainly the following equipment:

- Pilot console including mainly:
  - Steering wheel
  - Engine control station
  - Engine remote control panel
  - Pitch propeller Remote Control Panel
  - Bridge Navigational Watch Alarm
  - Gearbox Clutching Panel
  - Autopilot panel
  - ECDIS monitor
  - Echosounder monitor
  - Two radar displays
  - Magnetic compass
  - Substation of Public Adress system
- Headband including mainly:
  - Satellite compass monitor
  - AIS transponder
  - Two rudder angle indicators
  - GPS
- Starboardside console including mainly:
  - Chart table
  - Two cartography monitors
  - Alarm panels
  - Navigation lights panel
- Aft portside panel including mainly:
  - Steering gear remote control panel
  - Generator remote control panel
  - Fire detection panel
  - ACU Control Panel
  - VHF Direction Finder
- Searchlight control handle
- Pilot seat

2-13. CAPTAIN CABIN

The Captain Cabin mainly the following equipment:

- Bunk equipped with drawers
- Berth
- Cupboard

2-14. FISHING DECK

The aft deck includes mainly the following fishing equipment:

- Gantry including :
  - Dual net drum
  - Single net drum
  - Leading block
- Two warp winches
- Deck control panel of fishing gear
- Electrical control box
- One conveyor belt

2-15. FORE DECK

The fore deck includes mainly the following equipment:

- Electric winch for hoisting mast
- Two fish hold access hatches

2-16. BRIDGE DECK

The forward deck includes mainly the following equipment:

- Two Anchors of 255kg secured on cradles
- Anchoring line
- Breakwater
- Hoisting mast
- Technical fresh water filling connection
- Cable warp block
- Two liferafts
- Two flood lights 750 W
- Two flood lights 500 W

2-17. UPPER DECK

The upper deck includes mainly the following equipment:

- One single net drum
- One Gilson winch
- Fresh water filling connection (Stbd mast foot)
- Fuel oil and new oil filling station and polluted oil and oily water discharge station (Port mast foot)

2-18. WHEELHOUSE HOOD

The wheelhouse hood includes mainly the following equipment:

- Searchlight
- Fog horn
- Compass antenna
- VMS beacon
- AIS antenna
- GPS antennaes
- MIR 2000 antenna
- Port and Stbd navigation lights
- Flood lights 1000 W
- Flood lights 750 W

2-19. MAST

The mast includes mainly the following equipment:

- Two radar antennaes
- VHF ADDF antenna
- Three floodlights 750W
- Five floddlights 80W
- Navigation lights

CHAPTER 3 – SHIP EQUIPMENT LIST

3-1. GENERAL INFORMATION

- The identification of the Maintenance Schedule is elaborated from the Ship Equipment List (SEL) which is the key data to properly use this maintenance manual.
- Both SEL and Maintenance Schedule are detailed following the four disciplines shown below:
  - Communication & Navigation
  - Electrical
  - Ancillaries of Hull (Fuel oil, Air Conditioning...)
  - Mechanical

- The content of the SEL details all equipment fitted on board with the useful information described below:
  - A single Ship Index by equipment, in order to have a good traceability in case of replacement
  - The description of the equipment
  - The name of the OEM
  - The name of the original supplier
  - The model, type or designation
  - The quantity fitted onboard

- Each system can be composed of only one part or several parts.

- The list of the different systems fitted onboard the craft is described below:
  - 210-00 Hull Cathodic Protection System
  - 310-00 Main Deck Arrangement
  - 312-00 Steering Gear
  - 314-00 Lifesaving
  - 322-00 Heating - Ventilation & Air Conditioning System (HVAC)
  - 324-00 A/C Sea Water Cooling System
  - 331-00 Fresh Water System
  - 332-00 Firemain System
  - 333-00 Bilge System
  - 334-00 Sewage & Sanitary System

- 335-00 Marine Fuel Oil System
- 336-00 Lubricating Oil system
- 338-00 Air Vents, Sounding & overflow
- 341-00 Fire Detection system
- 341-10 CO2 Extinguishing system
- 342-00 Non Structural Tanks
- 350-00 Hatches / Doors & Windows
- 365-00 Galley
- 368-00 Refrigeration Plant for Fish Hold & Freezing Tunnel
- 371-00 Accommodation, Wheelhouse & Technical Rooms
- 410-00 AC 400V - 50Hz Electrical Network
- 412-00 Generator Set AC400V - 50Hz
- 420-00 DC 24V Electrical Network
- 440-00 Lighting System
- 448-00 Navigation Lights & Windscreen Wipers
- 470-00 Alarms & Safety
- 541-00 Propulsion Plant
- 543B00 Exhaust Plant
- 572B00 Controllable Pitch Propeller (CPP) and Transmission Shaft
- 575-00 Sea Water Cooling System
- 577-00 Propulsion & Gensets Remote Control & Monitoring Systems
- 610-00 Internal Communication System
- 620-00 External Communication System
- 630-00 Navigation System
- 900-00 Fishing Equipment

Note : NC = Not Codified

3-2. SHIP EQUIPMENT LIST DETAIL

SHIP INDEX	EQUIP. INDEX	EQUIPMENT DESCRIPTION	MAKER	ORIGINAL SUPPLIER	MODEL / TYPE / DESIGNATION	NB OF UNITS
210-00		**Hull**				
210-01	NC	Zinc Anode 1,2kg - Hull	Nochet	Nochet	AZ012	8
210-02	NC	Zinc Anode 5,9kg - Hull	Nochet	Nochet	AZ059	6
210-03	NC	Zinc Anode , single bolt, round plate 150 mm, Ø 30 mm thickness-Sea chest	Mondial Navys	Nochet	132-F-M01-P-210MM-01	2
310-00		**Main Deck Arrangement**				
310-01	NC	Port, Freeing	CMN	CMN	132-F-P01-X-31000-02	5
310-02	NC	Hoisting Mast	CMN	TSI	132-F-P02-X-31000-02	1
310-03	EE-0-200	Electric Winch AC220V 500kg	Huchez	Magi	TRC501CD9	1
310-04	NC	Bollard, Double	CMN	TSE	DB01	2
310-09	NC	Anchor AC14 255kg	Marit	Marit	AC14-255KG	2
310-10	NC	Anchoring Line	Marit	Marit		1
312-00		**Steering Gear**				
312-01	NC	Steering Unit	Fluidmecanica	Fluidmecanica	ST-1500-CS-P-35	1
312-02	QB-0-010 QB-0-020	Power Pack	Fluidmecanica	Fluidmecanica	9125	2
312-03	NC	Oil Tank, Double with Emergency Manual Pump	Fluidmecanica	Fluidmecanica	9891	1
312-06	QB-0-006	Tiller, Control, Steering Wheel	Kobelt	Fluidmecanica	MT-500-X	1
312-08	QB-0-001 QB-0-002	Starter, Electric	Fluidmecanica	Fluidmecanica	75CE721A	2
312-09	QB-0-003	Steering Remote Control Panel	Fluidmecanica	Fluidmecanica	980814A	1
312-10	NC	Rudder Stock	Fluidmecanica	Fluidmecanica	22163	1
314-00		**Lifesaving**				
314-01	NC	Inflatable Liferaft Flat 8 Men Pack B	Arimar	Arimar	8P-FLAT-PACK-B	2
314-02	NC	Hydrostatic Release Unit	Hammar	Arimar	H20	2

SHIP INDEX	EQUIP. INDEX	EQUIPMENT DESCRIPTION	MAKER	ORIGINAL SUPPLIER	MODEL / TYPE / DESIGNATION	NB OF UNITS
322-00		**Heating - Ventilation & Air Conditioning System**				
322-01	SC-0-014	Fan Unit, Helicoïd - Air Exhaust	Enag	Enag	SEEM020097-VA167-50	1
322-02	SC-0-020 SC-0-023	Air Conditioning Unit 4,7kw	Webasto	Webasto	WBCL120004B	2
322-03	SC-0-026	Air Conditioning Unit 5,9kw	Webasto	Webasto	WBCL120005B	1

CHAPTER 4 – SYSTEMS FUNCTIONAL DESCRIPTION

4-1. HULL CORROSION PROTECTION SYSTEM

Cathodic protection of the underwater hull is ensured by sacrificial zinc anodes bolted to the hull, to the propeller fixed nozzle and the rudder of the ship.
Cathodic protection of seawater circuits is provided by rod zinc anodes judiciously arranged.

4-2. ANCHORING AND MOORING SYSTEM

The anchoring and mooring equipment includes two anchors of 255kg stowed on fore bridge deck.
The anchors are deployed using the warp winches and cable warp block.

4-3. STEERING SYSTEM

The Trawler is equipped with one rudder operated by a hydraulic steering gear.

Characteristics of steering gear:

- Nominal Torque : 1520 kg.m
- Design Torque : 1900 kg.m
- Rotation Angle : 35°
- Manœuvre Time with one Pump : 28 sec. Port/Stbd
- Manœuvre Time with two Pumps : 14 sec. Port/Stbd
- Manœuvre Time Auxiliary : 60 sec. Port/Stbd

The remote control, located in the bridge desk, includes the following equipment:

- One steering wheel
- One manual / automatic selector
- Two rudder angle indicators

A hand operated pump driven by a wooden wheel, can be used to operate the steering gear, from the steering gear room, in case of power failure.
The steering system is interfaced with auto-pilot.

4-4. HEATING, VENTILATION AND AIR CONDITIONING

The ship is equipped with a mechanical ventilation system and electrical heaters.
An air conditioning system is fitted in the crew accommodation and in the wheelhouse.
The galley is equipped with independent mechanical hood ventilation.
The engine room is mechanically ventilated with one 12000 m3/h capacity air.

4-5. SEA WATER COOLING SYSTEM FOR HVAC & FISHING REFRIGERATION PLANT

The Sea Water Cooling System for HVAC & Fishing Refrigeration Plant includes:

- Two electro-pumps of 15 m3/h – 20 m for Fish Hold and Ice Generator Refrigerating Units
- One electro-pump of 1,2 m3/h for Crew Accomodations & Galley Air Conditionning Units
- One electro-pump of 1,2 m3/h for Wheelhouse and Captain Cabin Air Conditionning Unit

The cooling system takes the sea water in the engine room SW crossover.

4-6. FRESH WATER SYSTEM

The fresh water for domestic use is stored in a structural tank of 3m3 located in the store room.
The fresh water is supplied by a water pressure set of 2.5 m3/h – 25 m.
Hot water is provided from 2 instantaneous electric water heaters of 7 kW each.
The fresh water filling connection is located on upper deck at stbd mast foot.
Fresh water tank is fitted with level switch of low level alarm (30% tank capacity) that is monitored by the general alarm panel in wheelhouse.
Two vent lines connected to the top of tank allow the air vent with aseptic filter to the main deck level.

The technical fresh water for supplying the ice generator is stored in a structural tank of 12m3 capacity located in the bow.
The technical fresh water filling connection is located on bridge deck.
The technical fresh water is supplied to the ice generator by a self-priming E-pump.

4-7. FIREMAIN SYSTEM

The fire fighting and washing system includes:

- One electro-pump of 25 m3/h – 30 m (fire and deck washing purpose)
- One electro-pump of 2 m3/h - 25 m (sea water for toilet flushing)
- One hand pump for emergency (fwd deck)
- Three fire hydrants

The ship is fitted with a not pressurised firemain system.
The primary purpose of firemain system is to provide the supply of sea water throughout the ship by the main fire pump to:

- One fire hydrant in the aft bridge deck
- One fire hydrant and washunit in the Fwd deck
- One fire hydrant in the Workshop
- One deckwash unit and washunit in aft deck

In the event of trouble of the main fire E-pump, an emergency hand pump is to provide the supply of sea water to a fire hydrant in the Fwd deck.
A washing system maintained to 2,5 bar pressure by a sea water pump is to provide the sea water to the toilet unit.

4-8. BILGE SYSTEM

The system includes:

- Two electro-pumps 15 m3/h – 20 m
- One hand pump 2m3/h

The ship is fitted with three methods of extracting bilge water from the ship:

- One mud box directly connected to the bilge pumps allows the draining/dewatering of the engine room
- One suction manifold allows the selection of the compartment to be drained/dewatered
- One emergency draining/dewatering of the engine room by the sea water cooling pump of the main engine or by the fire pump through the sea water crossover

An oily water tank collects oily water from drip trays of the engine room and fuel oil separator.
An output connection located on main deck allows the drainage of tank.
The dewatering of forepeak is operated by handpump.

4-9. SEWAGE AND SANITARY SYSTEM

Grey waters from galley sink, showers and hand-basins are drained overboard.
The toilet is flushed with sea water of the washing system.
Black waters from toilet are drained overboard.

4-10. FUEL TRANSFER OIL SYSTEM

The system includes:

- One centrifugal fuel separator
- One transfer electro pump of 10 m3/h – 20 m
- One transfer hand pump
- Five storage tanks
- One service tank
- One manifold allowing the transfer of the fuel from any storage tank to any other storage tank or to the service tank throught the separator

The storage tanks and the service tank are equipped with a remote control quick closing valve from the CO2 room.
Filling by bunker station located at port on upper deck (max flow rate: 30m³/h) through the filter.
Discharge of fuel oil to shore by transfer pump.
Every fuel oil tank is equipped with a water draining suction pipe with self-closing valve operated from engine room.
The filling line overflow is discharged in the N°4 tank.
Via air vent and overflow system:

- The overflow of N°2 tank is discharged in the N°4 tank
- The overflow of N°1 and N°5 tanks are discharged in the N°3 tank

The fuel oil separator takes suction from any storage tank and discharges in the service tank.
The fuel oil separator takes suction from any storage tank and discharges in the service tank.
The main engine and the generating set supply lines are connected to the service tank and fitted with prefilters.
Fuel oil samples and water draining of fuel tanks is aided by connections and self closing valves.
Vent lines connected to the top of all tanks allow the air vent with flame arrester to the main deck level.

Fuel Oil capacities:

- Storage Tank N°1 (D T1) : 3,3m3 (Stbd Storage Room)
- Storage Tank N°2 (D T2) : 3,3m3 (Port Storage Room)
- Storage Tank N°3 (C T1) : 10m3 (Stbd Engine Room)
- Storage & Overflow Tank N°4 (C T2) : 10m3 (Port Engine Room)

- Storage Tank N°5 (B T10) : 9,27m3 (Fish Hold Room)
- Service Tank (C R2) : 1 m3

Storage fuel oil tanks (N°1), (N°2), (N°5) and fuel oil service tank are fitted with level switch and low level alarm (30% tank capacity) that is monitored by the general alarm panel.
Storage fuel oil tanks (N°3) and (N°4) are fitted with level switch, low level alarm (30% tank capacity) and very high level alarm (97% tank capacity) that is monitored by the general alarm panel.
Storage tanks located in storage and engine room are fitted with local sounding gauge.
Storage tank (N°5) located under the fish hold are fitted with a level glass gauge visible from engine room.

4-11. LUBRICATING OIL TRANSFER SYSTEM

The lubricating oil system includes:

- One new oil filling station located at port on upper deck
- One new oil tank (C R1) capacity 0.7m3
- One polluted oil tank (C R3) capacity 0.3m3
- One polluted oil discharge hand pump 4.3m3/h
- One polluted oil discharge station located at port on upper deck

The lubricating oil is embarked by gravity to the new oil tank.
New oil is manually transferred to the main engine and gensets.
Polluted oil stored in the polluted oil tank is removed from the main engine and gensets by their own hand pumps.
Polluted oil is discharged to the shore facilities through a deck draining station located to the upper deck.
Vent lines connected to the top of tanks allow the air vent with flame arrester to the main deck level.
New and polluted oil tanks are fitted with a level glass gauge.

4-12. REFRIGERATION PLANT FOR FISH HOLD AND ICE GENERATOR

The ship is equipped with a refrigeration plant:

- To maintain one fish hold of 90m3 at 0°C
- To supply one ice generator

The fish Hold 90m at 0°C refrigeration unit includes:

- One semi-hermetic reciprocating compressor of 6,9kW at -35°C / +36°C
- One sea water cooled condenser (sea water flow 4m3/h)
- Operating with R404A gas refrigerant
- Two copper coils of 3 m length at direct expansion
- Two copper coils of 2 m length at direct expansion
- Two double copper coils of 2 m length at direct expansion

The ice generator refrigeration unit includes:

- One semi-hermetic reciprocating compressor of 9,7kW at -45°C / +36°C
- One sea water cooled condenser (sea water flow 4m3/h)
- Operating with R404A gas refrigerant
- One ice generator of 2000 kg/day (with sea water temp. at 26°C)

4-13. CO2 FIRE EXTINGUISHING SYSTEM

The engine room and workshop are protected by a CO2 inert gaz fixed.
The CO2 battery includes two bottles with capacity 50 litres charged with 33kg of CO2.
The CO2 battery is located in CO2 room at the main deck alleyway level.
CO2 discharge is activated locally by a mechanical release lever.

Volume of Rooms:

- Engine Room : 76m³
- Workshop : 13m³

4-14. AC 400 V-3-50 Hz NETWORK

Electrical distribution is made through 3 networks:

- Main power network AC400V- 50Hz-3 phases
- Lighting, sockets and small auxiliaries network 230 VAC-50Hz-1 and 3 phases
- Direct current network 24VDC with batteries and battery chargers.

The main power network is AC400V–50 Hz–3 phases with neutral insulated and not distributed.
The electrical production is made by:

- One 100 kVA shaft generator driven by the PTO of the reduction gearbox of the propulsion plant (when the Trawler is sailing or fishing)

- One 47 kVA generating set (when the Trawler is anchoring or alongside)
- One a shore supply connection (when the Trawler is alongside)

The shaft generator, the generating set and the shore connection are connected to the EF-0-001 main switchboard located in the engine room.
The shaft generator and the generating set are not electrically connectable.
To go from "Earth" mode to "Diesel Generator" mode or "Shaft Generator" mode, a blackout is mandatory.

The main switchboard is composed of one production cell and one distribution cell.
The main switchboard is equipped with switching, measuring, protection and monitoring units required for switching and monitoring the electrical system.

The distribution panel supplies the following equipment:

- Hydraulic Power Pack for Steering Gear
- Refrigerating Units for Fish Hold and ice generator
- Engine Room Ventilation Fans
- Fuel Oil Transfer Pump
- Hydraulic Power Pack for fishing winches and drums
- Water Heaters
- Fire pump
- Bilge pumps
- Electric Cooker
- Washing Pressure Pump (Toilet)
- Fresh Water Pressure Pump
- Fish conveyor

Outputs from the distribution panels are identified by labels and protected by circuit breakers calibrated in accordance to the consumer power requirement. All the metallic parts are connected to the ship's hull by way of an earth pole link (dedicated Green/Yellow conductor or braid).

4-15. AC 400 V-3-50 Hz SHAFT GENERATOR

When the Trawler is sailing or fishing, the electrical power generation is accomplished by the three-phase AC synchronous constant voltage and brushless alternator named "Shaft Generator".
The shaft alternator is driven by the reduction gearbox of the propulsion plant.
The installation of the 100kVA shaft generator requires that the propulsion engine is constantly running at its rated speed.

To power the network at 50Hz frequency, the shaft generator driven by the propulsion plant, must turn at the fixed regime of 1500rpm.
The shaft generator is driven by a constant PTO drive (ratio 1.0795 / 1) at 1500rpm corresponding to a nominal engine regime of 1619rpm.

Characteristics of main alternator:

- Brushless
- Double bearings
- 400 V – 3 – 50 Hz
- IP23
- Class H

4-16. AC 400 V-3-50 Hz GENERATOR SET

At anchor or alongside, the electrical power generation is accomplished by one three-phase AC synchronous constant-voltage generators with an output of 42,7kW at 400V voltage and 50Hz frequency.
The generator is drove by a four-cylinder in-line, four-stroke diesel engine mounted on the same skid.
The starting of genset is performed by hand.

Characteristics of the diesel engine:

- Natural aspirated
- Displacement 4,4 litre
- Rotation Counterclockwise
- Sea water cooled
- Electric starter
- Starting battery
- DC24V Charging alternator

4-17. AC 230 V-1-50 Hz LIGHTING NETWORK

The AC230V-50Hz lighting network is suplied by AC400V busbars and distributed from the main switchboard.
Each output is clearly identified and protected by way of a circuit breaker (differential protection for sockets).

The network is distributed in two and three phases, with the earth pole connected to the Ship's hull.
All technical areas are lighted by fluorescent lights.
The fishing deck is lighted by two independent fluo light networks to achieve two levels of lighting and enhance the working conditions of the crew.
The aft part of the main deck located under the net drums is lighted with LED flood lights.
The wheelhouse and accommodation spaces are lighted by LED lights.
The exterior decks are fitted with LED lights.
One 24 VDC emergency lighting network is provided to light following areas in case of failure of the main power supply:

- Technical areas
- Accommodation spaces
- Alleyways

4-18. DC24V NETWORK

The Trawler is provided with two independant DC24V networks:

- One general service network supplying navigation equipment, fire detection system, fire extinguishing system, internal communications, emergency lighting…, including:
  - One DC24V distribution panel
  - One battery charger AC230V-1-50Hz/DC24V 60A
  - Two 12V 165Ah gel batteries

In case of a failure of the main power network (AC100V-1-50Hz), the supply of the DC24V equipment is automatically switched on the corresponding battery.

- One GMDSS network supplying the VHF equipment, the BLU HF equipment and NAVTEX equipment, including:
  - One GMDSS Power Supply Box AC230V-1-50Hz/DC24V 30A
  - Two 12V 90Ah gel batteries (3 hours autonomy)

In addition to the two here above networks, the ship is equipped with:

- One 12V 320 Ah AGM batterie dedicated to the start of the main engine
- One 12V 110 Ah AGM batterie dedicated to the start of the genset

4-19. PROPULSION SYSTEM

The Trawler is provided with a propulsion plant composed of:

- One caterpillar C32 diesel engine (559 kW at 1600 rpm) Rating A
- One Masson MM3900 reduction gearbox (reduction ratio 6,82/1)
- One Masson controllable pitch propeller 1970 mm diameter (4 blades)
- One fixed nozzle

4-20. MAIN PROPULSION ENGINE

The Caterpillar C32 marine diesel engine has the following characteristics:

- Nominal speed 1619 rpm
- Four-stroke cycle
- Twelve cylinders V block
- Direct fuel injection
- Twin turbocharged aftercooled aspiration
- Displacement 32 litre
- Rotation Counterclockwise
- Sea water cooled
- Electric starter
- Starting battery
- DC24V Charging alternator

4-21. PROPELLER AND MARINE TRANSMISSION

The propeller and marine transmission of trawler is mainly composed of:

- One Masson reduction gear box
- One Masson controllable pitch propeller (CPP)
- One Masson stern tube and propeller shaft

Characteristics of the reduction gear box:

- Ratio output shaft : 6.82/1
- Ratio PTO of shaft generator : 1.0795/1
- Propeller rotation : clock wise
- Ratio PTO-Clutch of fishing gear HP pump : 0.883/1
- Ratio PTO of CPP HP pump : 1/1

The CPP is composed of:

- One propeller shaft
- One bulkhead seal
- One earthing assembly
- One transmission lock
- One propeller 480 mm hub diameter
- One fixed nozzle
- One aft stern tube assembly
- One fore stern tube assembly
- One lubricating oil tank
- One electronic propeller control system

Characteristics of the propeller shaft:

- Length : 7128 mm
- Diameter : 162

Characteristics of the propeller:

- Diameter : 1970 mm
- Number of blades : 4
- Rotation : Clock Wise
- Nominal speed : 237 rpm
- Material : CU3
- Standard ISO : 484/2 Class 1
- Static balancing
- Inside diameter of propeller nozzle : 2000 mm

4-22. EXHAUST SYSTEM

The exhaust gases of the main engine and the generator set are ducted to the funnel.
The main engine and the generator are equipped with a dry exhaust system composed of:

- One steel compensator mounted on the engine
- One set of steel exhaust pipes
- One silencer

4-23. SEA WATER COOLING SYSTEM

The sea water cooling system is composed of:

- Two sea chests at engine room port and starboard side
- Two main sea water strainers
- One main manifold in engine room (crossover)

The following equipment takes sea water from the main manifold in the Engine Room:

- Main Engine Cooling
- Genset Cooling
- Refrigeration Plant for Fish Hold & Ice Generator Cooling
- Fire Fighting & Washing Pumps
- Emergency Fire Fighting Hand Pump
- Sea Water Cooling System for HVAC
- Sea Water coaling Pump for fishing gear

A bilge mud box is connected to the main manifold in order to allow in case of emergency the dewatering of the engine room by the sea water cooling pump of the main engine and by the fire pump.

4-24. MONITORING AND REMOTE CONTROL SYSTEM

The monitoring and remote control, located in the fore bridge desk, include the following equipment:

- One engine remote control panel
- One single lever mechanical control head
- One pitch propeller bridge control panel
- One clutching panel

4-25. INTERNAL COMMUNICATION SYSTEM

One intercom subsystem, Vingtor, is fitted with 5 terminals, providing the following functions:

- Point to point communication
- Intercommunication/conference
- General broadcast
- Alarms

The main station is located in the wheelhouse.

The terminals are located in the following rooms:

- Engine room
- Steering gear room
- Crew quarters
- Mess
- Workshop

4-26. EXTERNAL COMMUNICATION SYSTEM

The GMDSS (Global Maritime Distress Safety System) covers navigation in A1+A2 area up to 100 nautical miles of the coast.
The GMDSS is compliant to the SOLAS convention.
It includes:

- One VHF/IMM FURUNO-FM8900S transceivers with associated digital selective call controller. This transceiver will be connected to the GPS, in order to transmit ship position in case of distress
- One MF FURUNO-FM1570 transceiver associated with an MF DSC controller (associated with two 7.25m long whip antennas)
- Two VHF Ocean Signal V100B watertight portable transceivers, GMDSS compliant
- One emergency Position Indication Radio Beacon (EPIRB) Ocean Signal E100G /ARH100 type
- One radar transponder (SART) FURUNO S100 type
- One Navtex FURUNO NX700 Prob with printer

GMDSS network is supplied by DC24V emergency supplies.
A reserve of energy will be provided to supply radio installations, for the purpose of conducting distress and safety radio communications, in the event of failure of the ship's main and emergency sources of electrical power.
One AIS transponder (Automatic Identification System), TRANSAS Class A type, is fitted.

4-27. NAVIGATION SYSTEM

The navigation equipment is compliant to the future SOLAS convention, applicable to fishing ships of less than 24m.
It includes:

- One integrated log/echo Sounder FURUNO FCV1150 type including:

  - One central unit with integrated control panel
  - One flush mounted hull sensor
- Two GPS FURUNO GP 33 type. The 4.3 inches control panel is integrated to wheelhouse console
- The secundary GPS allows securing GPS function
- One magnetic compass fitted in the wheelhouse
- One X Band Radar (36Nm) FURUNO M1835 type used as main radar on the ship or as a secondary one

  Radar characteristics:
  - Maximum detection range : 36 Nautical Miles
  - Power : 4 kw
  - Antenna : 24 inches
  - Screen : 10 inches
- One X Band Radar (48Nm) FURUNO M1945 type used as main radar on the ship or as a secondary one

  Radar characteristics:
  - Maximum detection range : 48 Nautical Miles
  - Power : 4 kw
  - Antenna : 40 inches
  - Screen : 10 inches
- One FURUNO SC-30 type satellite compass allows displaying ship heading true or magnetic and GPS data, and to distribute this information to others subsystems (Auto pilot, radar, ECDIS and Echo sounder)

  Satellite Compass characteristics:
  - Heading accuracy : 0,5°
  - Heading Resolution : 0,1°
  - Follow up rate : 45°/s
- One ECDIS (nautical charts)

This system allows displaying Nautical charts on PC screen.
It is based on Max sea Time zero Pro software.

This software manages and display following data:
- Ship GPS Positioning
- Weather Forecast
- Tidal current
- Waypoint and routes

More over, a module allows recording one echo sounding point per second (through a connection between GPS and echo sounder) and created an accurate 3D chart of the ocean floor.
All the tracks, marking can be recorded, as well in 2D or 3D mode.

One weather station RADIO OCEAN Rowind 33 including:

- One static sensor allowing measurement of the following parameters:
  - Relative speed and true wind
  - Wind direction
  - Air temperature
  - One display on the wheelhouse
- One video system CCTV 4 video cameras
- A main station in the wheelhouse is connected to 4 video cameras, in order to enhance safety on board
- One VHF radio receiver direction finder TAIYO TDL1550 A type able to detect Radio transmission from ships or coastal station
- The direction of the transmission and its level is displayed
- The system is able to scan VHF channels, 16 channel and aero distress 121.5 frequency
- One Autopilot SIMRAD AP70 type, including a gyro compass RC 25 type
  The autopilot is interfaced with the steering gear.
  It is connected to a rudder angle indicator SIMRAD RI35 (45° Starboard, 45° portside).
- One IXBlue system Multibeam sounder, data base

This system is based around a WASSP Multi beam sounder, allowing carrying out a very powerful probe on 120° under the ship.
Associated with dedicated software, it can reconstitute a 3D display of the ocean floor and the fishing resources.
A data base of the catches, according to geographical position of the ship and sounder data can be managed.
The 3D display allows a particularly effective work on wreck.
Information available allows a reduction in the fuel oil costs and a better resources management.

4-28. FISHING GEAR

The Trawler is equipped with the following fishing equipment:

- Two warp winches
  - Rope capacity : 1000 m of trawling warp Ø 20 mm

- Automatic synchronized rope-coiling trolley
- Hydraulic and manual claw clutch and brake
- Pull capacity at middle layer : 5000 daN

- One single and one double net drums, fitted on stern gantry
  - Capacity : 3 x 4,8 m3
  - Drum shaft diameter : 292 mm
  - External diameter : 2200 mm
  - Width : 1350 mm
  - Pull capacity at drum shaft (max) : 12000 daN

- One storage drum (located on bridge aft deck at portside)
  - Capacity : 2,9 m3
  - Drum shaft diameter : 240 mm
  - External diameter : 1800 mm
  - Width : 1200 mm
  - Pull capacity at drum shaft (max) : 8900 daN

- One Gilson winch fitted on aft shelter deck
  - Rope capacity : 40 m of hauling warp Ø 20 mm
  - Drum shaft diameter : 73 mm
  - External diameter : 700 mm
  - Width : 180 mm
  - Hydraulic brake
  - Pull capacity at drum shaft : 6400 daN

Winches and drums are driven by a hydraulic system including the main following equipment:

- One hydraulic pump with 6 independent flows fitted on a clutchable PTO of the gear box
- One hydraulic 700 liters tank with filtration and oil cooler
- One electrical control box
- One deck control panel

4-29. FISH TREATMENT

The Trawler is equipped with an unloading tray to receive the content of the cod end.
The fish is the directed by a belt conveyor to three workstations to place the fish in storage boxes.

CHAPTER 5 – OPERATING INSTRUCTIONS

5-1 GENERAL INFORMATION

This chapter details the operating procedures applicable to this 23,3m Trawler.
The pre-operational checks and required procedures to make the Trawler ready for operation are described in the check list in order to assure that all preparatory procedures are completed.
The main requirements for placing each major equipment in operation and for shutting down or securing are also outlined.
Reference to onboard Maker's and Supplier's technical manuals is given when applicable.

5-2. PRE-OPERATIONAL CHECKLIST

The following pre-operational checks should be performed prior to operation of the Trawler in order to verify that the ship is seaworthy.

5-2-1. Lifesaving Equipment

CHECK	REQUIREMENT
Verify the life saving and safety equipment are installed and operational.	- Lifebuoys and floating lines (2), - Light marker (1).
Ensure the presence of two liferafts. Ensure that the hydrostatic releases are correctly installed. Check the specified expiry date of hydrostatic releases.	Ensure the containers are stored correctly on to its cradles.
Ensure the presence of portable lifesaving equipment.	- Life-throwing apparatus (4) wheelhouse, - Life Jackets (2) wheelhouse, (2) workshop, (8) under each berth, - Red distress flares (6) whelhouse, - Self-activating buoyant smoke signal (2) wheehouse, - Portable signalling lamp (1) wheelhouse.
Ensure the presence and operating of following portable communication equipment. Check the specified expiry date of batteries.	- VHF portable GMDSS, - EPIRB

5-2-2. Firefighting Equipment

CHECK	REQUIREMENT
Verify that sea water firemain system is operational.	
Verify that the CO2 firefighting system is operational.	As per outline in Tyco Operation and Maintenance Manual.
Ensure the presence of portable firefighting equipment.	- Water Spray Extinguishers (3), - CO2 Extinguishers (2), - Fire hose and nozzles (4), - Supply Air Breather (1).
Verify that fire detection system is operational	As per outline in Marinelec DI-09 Operation and Maintenance Manual.

5-2-3. Machinery Equipment

Fuel Oil System

CHECK	REQUIREMENT
Drain sludge and decantation water from the five Fuel Oil Storage Tanks and Service Tank.	Empty sludges and condensate water in the Oily Water Tank.
Check fuel level in storage Fuel Oil Tanks. Fill as necessary for mission. Tank capacities: Storage Tank 1 (Stbd Storage Room) : 3.300 litre Storage Tank 2 (Port Storage Room) : 3.300 litre Storage / Overflow Tank 3 (Stbd Engine Room) : 10.000 litre Storage / Overflow Tank 4 (Port Engine Room) : 10.000 litre Storage Tank 5 (Fish Hold Room) : 9.270 litre	Know the capacity of your fuel tanks and be aware of how much spare capacity. Be able to reconcile the quantity of fuel that goes in with the capacity of the tank. Fill as required with MARINE DIESEL FUEL OIL ONLY as indicated by fuel level indications located in the wheelhouse. The filling line overflows are discharged in the N°3 and N°4 tanks. Before refuelling, ensure that you have the correct fire-fighting equipment on board, that it is in good working order, that it is easily accessible and that you know how to use it. Make sure you know where is stored the hydrocarbon spill kit.
Verify that all Fuel Oil System valves are correctly positioned.	In accordance with § 5-3-7.
Test Quick Closing Remote Control Valves and release all tank valves in OPEN position. Check oil level for each independant remote control handle.	Remote Control System is located on the Main Deck Alleyway. Maintain the oil level to the full mark on the sight glass. Use ONLY designated HYDRAULIC OIL in respect to Lubricants Schedule.
Select the Storage Tank for supply the fuel oil separator and open the corresponding suction valve.	

Lubricating Oil System

CHECK	REQUIREMENT
Check oil level in storage Tank.	As required, complete tank with Rimula R4L 15W-40 oil ONLY, in respect to Lubricants Schedule. Know the capacity of your oil tank and be aware of the reserve capacity.

Sea Water Cooling System (Main propulsion engine and Genset)

CHECK	REQUIREMENT
Remove and clean the sea chest strainer, clean thoroughly body and basket and reinstall.	Working on each strainer one after another. Isolate the filter (close inlet and outlet valves) and drain internal pressure before removing the cover.
Operate all valves and ensure that they are correctly positioned.	In accordance with § 5-3-18.

Shafting Line and Controllable Pitch Propeller

CHECK	REQUIREMENT
Check lubricating oil level of: - Stern tube oil tank located in workshop, - Fwd shaft seal oil tank located in storage room. Add lub. oil as required.	Maintain the oil level to the full mark on the level indicator or dipstick. Use ONLY designated LUBRICATING OIL in respect to Lubricants Schedule.
Check the stern tube area for leaks and free rotation of shaft.	
Check the area of shaft coupling and pitch indicator for: - ensure that the free rotation of shaft (presence of rags or other), - ensure that the earthing brushes are not loose or corroded.	
The hydraulic system is fed from the gearbox sump. Please refer to the hereafter "Main propulsion system" for the oil level check.	

Main Propulsion System (Main Engine & Reduction Gearbox)

CHECK	REQUIREMENT
Ensure that main propulsion engine and reduction gearbox are free of all maintenance operations.	
Check oil level of main propulsion engine with dipstick. Add lubricating oil as required.	Maintain the oil level to the full mark on the level gauge. Use ONLY designated LUBRICATING OIL in respect to Lubricants Schedule.
Check oil level of gearbox with dipstick ENGINE RUNNING AT IDLE. Add lubricating oil as required.	Maintain the oil level to the full mark on the level gauge. Use ONLY designated LUBRICATING OIL in respect to Lubricants Schedule.
Check Coolant level of main propulsion engine.	Maintain the coolant level to the full mark on the tank. Use ONLY designated COOLANT in respect to Lubricants Schedule.

CHECK	REQUIREMENT
Verify starting DC24V power is available.	
Inspect the alternator belt on main engine.	Remove the belt guard if necessary.
Make sure the gearbox selector is in NEUTRAL position.	
Perform main propulsion engine pre-operational checks, to include alarms.	As per outline in Caterpillar C32 Operation and Maintenance Manual.

Generator Set

CHECK	REQUIREMENT
Ensure that the genset are free of all maintenance operations.	
Check oil level of Genset engine with dipstick. Add lubricating oil as required.	Maintain the oil level to the full mark on the level gauge. Use ONLY designated LUBRICATING OIL in respect to Lubricants Schedule.
Check Coolant level in the coolant expansion tank of engine.	Maintain the coolant level to the full mark on the tank. Use ONLY designated COOLANT in respect to Lubricants Schedule.
Verify starting DC24V power is available.	
Perform genset engine pre-operational checks, to include alarms.	As per outline in Caterpillar C4.4 Operation and Maintenance Manual.

Fishing Equipment - Hydraulic Power Pack

CHECK	REQUIREMENT
Ensure that all drums, winches and HPU are free of all maintenance operations.	
Check oil Tank level. Add hydraulic oil as required.	Maintain the oil level to the full mark on the level indicator. Use ONLY designated HYDRAULIC OIL in respect to Lubricants Schedule.

5-2-4. Auxiliary Equipment

Steering Gear

CHECK	REQUIREMENT
Check oil Tank level. Add hydraulic oil as required.	Maintain the oil level to the full mark on the sight glass. Use ONLY designated HYDRAULIC OIL in respect to Lubricants Schedule.
Ensure that the rudder stock and jacks are free of movement.	
Verify that the steering system is operational.	As per outline in Fluidmecanica Operation and Maintenance Manual.

Sea Water Cooling System for HVAC & Fishing Refrigeration Plant

CHECK	REQUIREMENT
Operate all valves and ensure that they are correctly positioned.	In accordance with § 5-3-2.

Fresh Water System

CHECK	REQUIREMENT
Check the residual Fresh Water tank level (3000 litre capacity). Check the residual technical fresh water tank level (12000 litre capacity). Fill as necessary for mission.	Fill tanks using designated POTABLE WATER ONLY until tanks overflow.
Verify that the water heaters are operational.	

Firemain System

CHECK	REQUIREMENT
Operate all valves and ensure that they are correctly positionned.	In accordance with § 5-3-4.

Bilge System

CHECK	REQUIREMENT
Verify that bilge system is operational.	In accordance with § 5-3-5.

Refrigeration Plant for Fish Hold and Ice Generator

CHECK	REQUIREMENT
Check oil levels of reciprocating compressors.	If the oil level drops; seek skilled refrigeration personnel. Use ONLY designated LUBRICATING OIL in respect to Lubricants Schedule.
Check view finder indicator on liquid line.	Green: The refrigerant is dry. Yellow: the refrigerant is too wet; call skilled refrigeration personnel.
Check the level of salt tablets in the vertical doser tube of ice generator	

5-2-5. Electrical

CHECK	REQUIREMENT
Ensure that all navigation lights are operational.	
Verify all searchlights are operational.	Test each light individually.
Verify the navigational horn is operational.	

5-2-6. Communications - Navigation

CHECK	REQUIREMENT
Ensure that all electronic equipment is operational.	

5-2-7. Other

CHECK	REQUIREMENT
Verify items stored in various storerooms and storage areas are secured for sea.	Check each storeroom and storage area. Secure items as required.
Verify the watertight hatch covers and watertight doors are closed and dogged tightly and all weathertight doors operate freely.	Check each hatch and door individually. Close and dog tightly as required.

5-3. OPERATING OF THE SYSTEMS

5-3-1. Steering Gear

5-3-1-1. Monitoring and Control System

The monitoring and control system includes in steering room:

- One rudder Angle Transmitter
- One emergency Hand Wheel
- One electrical starter PUMP 2
- One electrical starter PUMP 1

and in wheelhouse:

- Two rudder Angle Indicator
- One "AUTO/MANUAL" Selector
- One bridge Remote Control Monitoring and Alarm Panel
- One steering Wheel

The starting of hydraulic plant (Pump 1 & Pump 2) can be started locally or remotely.
The Bridge Remote Control Monitoring and Alarm Panel enable the operator to control the starting of one or two hydraulic pumps.
Moreover, if one power pack (Pump 1) is in standby position, any failure in the other power pack (Pump 2) involves the automatic starting of the power pack (Pump 1).

An Emergency Hand operated pump driven by a wood wheel allows to control the locally steering gear .
One "AUTO/MANUAL" Selector allows the manual steering by the wheel or by the autopilot signals (AUTO Mode).

5-3-1-2. Starting of Hydraulic Power Pack

The ship is considered electrically self powered.
Before starting, ensure that pre-operational checks on the power pack are performed; mainly for oil level.
Do not start any engine if there is a warning tag attached to the starter panels.

Fig5-1 Steering Gear - Electrical Starters HPU1 & 2

Fig5-2 Bridge - Steering Gear Remote Control Monitoring and Alarm Panel

Figure 5-3 Bridge - Steering Wheel

Figure 5-4 Bridge - Auto-Manual Steering Selector

Starting Power Pack from Wheelhouse

- Electrical starters (Steering Room)

- Turn the selectors of "PUMP 1" and "PUMP 2" on the "REMOTE" position.

- Bridge Remote Control Monitoring and Alarm Panel

- Turn the selector of "PUMP 1" on the "ON" position and the selector of "PUMP 2" on the "STANDBY" position (or inversely).

=> The Pump 1 starts.

=> In case of any failure of Pump 1, the Pump 2 starts automatically.

Starting Power Pack from Steering Room

- Electrical starters (Steering Room)

- Turn the selector of "PUMP 1" on the "ON" position and the selector of "PUMP 2" on the "0" position (or inversely).

5-3-1-3. Stopping of Hydraulic Power Pack

Depending on where was made the start, set the switch to "0" or "OFF".

5-3-1-4. Selection of steering mode (Main Bridge Desk)

Turn the Steering Gear "AUTO/MANUAL" selector to the "AUTO" position for automatic steering by Autopilot.

5-3-2. Sea Water Cooling System for HVAC & Fishing Refrigeration Plant

The following table shows the valves position to be set to operate the sea water cooling system when the ship is in normal operation and no firefighting is operated:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SR-0-501	Captain Cabin & Wheelhouse AC Condenser - Inlet	Wheelhouse	OPEN
SR-0-502	Galley AC Condenser - Inlet	Galley	OPEN
SR-0-507	Accomodations AC Condensers - Overboard Discharge	Port Engine Room	OPEN
SR-0-508	Fish Hold &Ice Generator Refrigerating Condensers - Sea Water Suction	Stbd Engine Room	OPEN
SR-0-509	Fish Hold Refrigerating Sea Water Pump SR-0-001 - Suction	Stbd Engine Room	OPEN
SR-0-510	Fish Hold Refrigerating Sea Water Pump SR-0-002 - Suction	Stbd Engine Room	OPEN
SR-0-511	Wheelhouse AC Condenser Sea Water Pump SR-0-003 - Suction	Stbd Engine Room	OPEN
SR-0-514	Galley & Crew Cabin AC Condenser Sea Water Pump SR-0-004 - Suction	Stbd Engine Room	OPEN
SR-0-515	Galley & Crew Cabin AC Condenser Sea Water Pump SR-0-004 - Discharge	Stbd Engine Room	OPEN
SR-0-516	Wheelhouse AC Condenser Sea Water Pump SR-0-003 - Discharge	Stbd Engine Room	OPEN
SR-0-517	Fish Hold Refrigerating Sea Water Pump SR-0-002 - Discharge	Stbd Engine Room	OPEN
SR-0-518	Fish Hold Refrigerating Sea Water Pump SR-0-001 - Discharge	Stbd Engine Room	OPEN
SR-0-521	Fish Hold Refrigerating Condenser - Inlet	Stbd Storage Room	OPEN
SR-0-522	Fish Hold Refrigerating Condenser - Discharge	Stbd Storage Room	OPEN
SR-0-523	Ice Generator Refrigerating Condenser - Inlet	Stbd Storage Room	OPEN
SR-0-524	Ice Generator Refrigerating Condenser - Discharge	Stbd Storage Room	OPEN
SR-0-527	Fish Hold & Ice Generator Refrigerating Condensers - Overboard Discharge	Port Storage Room	OPEN
SR-0-530	Crew Cabin AC Condenser - Inlet	Crew Cabin	OPEN
SR-0-531	Accomodations AC Condensers - Sea Water Suction	Stbd Engine Room	OPEN

Close the circuit breaker D31 in the Main Switchboard EF-0-001 to supply the AC cooling pumps.
The starting and stopping of SW pumps are operated automatically by the air conditionning system.

Figure 5-5 Stbd Engine Room - SW AC Cooling Pumps

5-3-3. Fresh Water System

The following table shows the valves position to be set to operate the fresh water system when the ship is in normal operation and no fresh water replenishment is to be operated:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SD-0-501	Technical Fresh Water Tank Filling - Outlet Filter	Fwd Storage Room	OPEN
SD-0-502	Ice Generator - FW Supply	Fwd Storage Room	OPEN
SD-0-503	Freshwater Storage Tank - Suction	Aft Engine Room	OPEN
SD-0-504	Fresh Water Filter - Inlet	Stbd Engine Room	OPEN
SD-0-507	Fresh Water Filter - Outlet	Stbd Engine Room	OPEN
SD-0-508	Sample Tanking Cock	Aft Engine Room	SHUT
SD-0-509	Fresh Water Pressure Pump - Discharge	Stbd Engine Room	OPEN
SD-0-511	Crew Sanitary Water Heater - Cold FW Supply	Crew Sanitary	OPEN
SD-0-512	Fuel Oil Separator - Fresh Water Supply	Port Engine Room	OPEN
SD-0-514	Fresh Water Tank Filling	Aft Engine Room	SHUT
SD-0-515	Crew Sanitary Water Heater - Hot FW Discharge	Crew Sanitary	OPEN
SD-0-517	Fresh Water Tank Filling - Outlet Filter	Aft Engine Room	OPEN
SD-0-518	Galley & Captain Cabin Water Heater - Cold FW Supply	Galley	OPEN
SD-0-520	Galley & Captain Cabin Water Heater - Hot FW Discharge	Galley	OPEN
SD-0-522	Technical Fresh Water Tank Filling - Outlet Filter	Fwd Storage Room	SHUT
SD-0-524	Ice Generator Water tank - Discharge	Fwd Storage Room	OPEN

5-3-3-1. Fresh Water Filling from Shore

To replenish fresh water tank from the Deck connection (Stbd Side) it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SD-0-514	Fresh Water Tank Filling	Aft Engine Room	OPEN
SD-0-517	Fresh Water Tank Filling - Outlet Filter	Aft Engine Room	OPEN

5-3-3-2. Technical Fresh Water Filling from Shore

To replenish technical fresh water tank feeding the ice generator from the Deck connection (Fwd Bridge Deck) it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SD-0-501	Technical Fresh Water Tank Filling - Outlet Filter	Fwd Storage Room	OPEN
SD-0-522	Technical Fresh Water Tank Filling - Outlet Filter	Fwd Storage Room	OPEN

Figure 5-6 Engine Room - FW Pressure Pump

Figure 5-7 Fishing Deck - Aseptic Filter

5-3-3-3. Operating of fresh water pressure pump

Close the circuit breaker D17 in the main switchboard EF-0-001 to support the FW pump.
The starting and stopping of FW pressure pump are operated automatically by the pressure of fresh water system.

5-3-3-4. Operating of water heaters

Close the circuit breakers D10 and D11 in the Main Switchboard EF-0-001.

5-3-3-5. Operating of self-priming feeding pump

The self-priming pump of fresh water, feeding the ice generator, is started along with the ice generator.

5-3-4. Firemain System

The following table shows the valves position to be set to operate the firemain system when the ship and machinery equipment are in normal operation and no firefighting is to be operated:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SM-0-501	Fire Hydrant - Upper Deck	Bridge Deck	SHUT
SM-0-502	Fishing Deck Wash - SW Supply	Aft Fishing Deck	SHUT
SM-0-503	Tray Crustaceans - SW Supply	Aft Fishing Deck	SHUT
SM-0-504	Tray Crustaceans - Drainage	Aft Fishing Deck	SHUT
SM-0-505	Washunit - SW Supply	Aft Fishing Deck	SHUT
SM-0-506	Fire Hydrant - Workshop	Workshop	SHUT
SM-0-507	Fire Hydrant - Fore Deck	Fwd Fishing Deck	SHUT
SM-0-508	Gravity Toilet - Isolating Valve	Crew Sanitary	OPEN
SM-0-509	Emergency Fire Hand Pump - Isolating Valve	Fwd Fishing Deck	SHUT
SM-0-510	Emergency Fire Hydrant - Fore Deck	Fwd Fishing Deck	SHUT
SM-0-514	Main Fire Pump - Discharge	Stbd Engine Room	OPEN
SM-0-515	Main Fire Pump - SW Suction	Stbd Engine Room	OPEN
SM-0-517	Sea Water Pressure Pump - Discharge	Stbd Engine Room	OPEN
SM-0-518	Sea Water Pressure Pump - SW Suction	Stbd Engine Room	OPEN
SM-0-520	Emergency Fire Hand Pump - SW Suction	Fwd Engine Room	OPEN

Figure 5-8 Engine Room - Fire Pump

Figure 5-9 Engine Room - Sea Water Pressure Pump

Figure 5-10 Main Switchboard - Fire Pump Control

Figure 5-11 Workshop - Fire Pump Remote Control Panel

5-3-4-1. Operating of sea water pressure pump

Close the circuit breaker D16 in the Main Switchboard EF-0-001.
The starting and stopping of SW pressure pump are operated automatically by the pressure of sea water flushing system.

5-3-4-2. Operating of fire pump from main switchboard EF-0-001 or from the Remote Control Box located in workshop

Close the circuit breaker D12 in the Main Switchboard EF-0-001.
Press the green push-button to start the pump.
Press the red push-button to stop the pump normally.
In the event of any problem, press the "Emergency stop button" to stop and lock the Fire pump. The Fire pump will not re-start when the button is locked. To unlock, turn the button clockwise in order to reset.

5-3-5. Bilge System

The following table shows the valves position to be set to operate the bilge system when the ship and machinery equipment are in normal operation and no bilge draining is to be operated:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SE-0-501	Bilge Pumps - Overboard Discharge	Port Engine Room	OPEN
SE-0-502	Bilge Pump SE-0-001 - Discharge	Stbd Engine Room	OPEN
SE-0-503	Bilge Pump SE-0-002 - Discharge	Stbd Engine Room	OPEN
SE-0-505	Bilge Pump SE-0-001 - Suction	Stbd Engine Room	OPEN
SE-0-507	Bilge Pump SE-0-002 - Suction	Stbd Engine Room	OPEN
SE-0-509	Fwd Engine Room - Bilge draining	Fwd Engine Room	SHUT
SE-0-511	Engine Room - Emergency Bilge Draining	Fwd Engine Room	SHUT
SE-0-515	Stbd Fish Hold Room - Bilge Draining	Fwd Engine Room	OPEN
SE-0-516	Fish Hold Room - Bilge Draining	Fwd Engine Room	SHUT
SE-0-517	Steering Gear Room - Bilge Draining	Aft Engine Room	SHUT
SE-0-518	Storage Room - Bilge Draining	Aft Engine Room	SHUT
SE-0-519	Aft Engine Room - Bilge Draining	Aft Engine Room	SHUT
SE-0-527	Port Fish Hold Room - Bilge Draining	Fwd Engine Room	OPEN

5-3-5-1. Main Bilge Operation

To operate the bilge system by one or two bilge E-pumps, it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
Dewatering of Steering Gear Room			
SE-0-517	Steering Gear Room - Bilge Draining	Aft Engine Room	OPEN
Dewatering of Storage Room			
SE-0-518	Storage Room - Bilge Draining	Aft Engine Room	OPEN
Dewatering of Engine Room in direct line			
SE-0-509	Fwd Engine Room - Bilge draining	Fwd Engine Room	OPEN
Or /and			
SE-0-519	Aft Engine Room - Bilge Draining	Aft Engine Room	OPEN
Dewatering of Fish Hold Room			
SE-0-516	Fish Hold Room - Bilge Draining	Fwd Engine Room	OPEN

5-3-5-2. Emergency dewatering of the engine room by the sea water cooling pump of the main engine

To operate the emergency dewatering the sea water cooling pump of the main engine, it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SE-0-511	Bilge Engine Room - Emergency Bilge Draining	Fwd Engine Room	OPEN

5-3-5-3. Emergency dewatering of the engine room by the fire pump

Refer to the Operating of Sea Water Cooling System

Figure 5-12 Engine Room - Bilge Pumps

Figure 5-13 Engine Room - Bilge Manifold

Figure 5-14 Main Switchboard - Bilge Pumps Control

Figure 5-15 Engine Room - Bilge Pumps Remote Control Panels

5-3-5-4. Operating of bilge pumps N°1 and N°2 from the Main Switchboard or from the Remote Control Boxes, both located in engine room.

Close the circuit breakers D13 an D14 in the Main Switchboard EF-0-001.

Press the green push-button to start the pump.

Press the red push-button to stop the pump normally.

In the event of any problem, press the "Emergency stop button" to stop and lock the bilge pump. The bilge pump will not re-start when the button is locked. To unlock, turn the button clockwise in order to reset.

5-3-6. Sewage & Sanitary System

The following table shows the valves position to be set to operate the sewage and sanitary system when the ship is in normal operation:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SU-0-501	Crew Quarters Wash Basin, Shower & ACU Condensates - Overboard Discharge	Port Storage Room	OPEN
SU-0-504	Captain Cabin Wash Basin, Sink Galley & ACU Condensates - Overboard Discharge	Port Engine Room	OPEN
SU-0-506	Gravity Toilet - Overboard Discharge	Port Storage Room	OPEN

5-3-7. Fuel Transfer Oil System

The following table shows the valves position to be set to operate the fuel oil transfer system when the ship and the machinery equipment are in normal operation and no fuel oil transfer is to be operated:

In the below table, the storage tank N°4 is selected for supply the fuel oil separator.

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SG-0-501	Fuel Oil Filling	Port Engine Room	SHUT
SG-0-502	FO Discharge Filter - Isolating Valve	Port Engine Room	SHUT
SG-0-503	FO Suction Filter - Isolating Valve	Port Engine Room	SHUT
SG-0-506	FO Filling Line Sample Cock	Port Engine Room	SHUT
SG-0-509	Main Engine FO Return - Discharge	Port Engine Room	OPEN
SG-0-510	FO Transfert Pumps Suction Filter - Isolating Valve	Port Engine Room	OPEN
SG-0-512	FO Transfert Pumps Discharge Filter - Isolating Valve	Port Engine Room	OPEN
SG-0-513	FO Transfert E-Pump Suction - Isolating Valve	Port Engine Room	OPEN
SG-0-514	FO Transfert Hand-Pump Suction - Isolating Valve	Port Engine Room	SHUT
SG-0-516	FO Transfert E-Pump Discharge - Isolating Valve	Port Engine Room	OPEN
SG-0-517	Transfert Line Sample Cock	Port Engine Room	SHUT
SG-0-518	FO Transfert Hand Pump - Discharge	Port Engine Room	SHUT
SG-0-520	Fuel Oil Tank 1 - Suction	Port Engine Room	SHUT
SG-0-521	Fuel Oil Tank 1 - Filling	Port Engine Room	SHUT
SG-0-522	Fuel Oil Tank 3 - Suction	Port Engine Room	SHUT
SG-0-523	Fuel Oil Tank 1 - Filling	Port Engine Room	SHUT
SG-0-524	Fuel Oil Tank 5 - Suction	Port Engine Room	SHUT
SG-0-525	Fuel Oil Tank 5 - Filling	Port Engine Room	SHUT
SG-0-526	Fuel Oil Tank 4 - Suction	Port Engine Room	OPEN
SG-0-527	Fuel Oil Tank 4 - Filling	Port Engine Room	SHUT
SG-0-528	FO Service Tank 6 - Suction	Port Engine Room	SHUT
SG-0-529	FO Service Tank 6 - Filling	Port Engine Room	SHUT
SG-0-530	Fuel Oil Tank 2 - Suction	Port Engine Room	SHUT
SG-0-531	Fuel Oil Tank 2 - Filling	Port Engine Room	SHUT
SG-0-532	Fuel Oil Tank 4 - Filling / Suction (Remote Controlled Quick Closing Valve)	Port Engine Room	OPEN
SG-0-533	Fuel Oil Tank 4 - Water Draining	Port Engine Room	SHUT
SG-0-534	Fuel Oil Tank 3 - Filling / Suction (Remote Controlled Quick Closing Valve)	Stbd Engine Room	OPEN
SG-0-535	Fuel Oil Tank 3 - Water Draining	Stbd Engine Room	SHUT

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SG-0-537	Genset FO Return - Discharge	Port Engine Room	OPEN
SG-0-539	FO Service Tank - Feeding (Remote Controlled Quick Closing Valve)	Port Engine Room	OPEN
SG-0-540	FO Service Tank - Water Draining	Port Engine Room	SHUT
SG-0-542	FO Service Tank - Filling / Suction (Remote Controlled Quick Closing Valve)	Port Engine Room	OPEN
SG-0-543	FO Separator - Discharge	Port Engine Room	OPEN
SG-0-544	Dual Static FO Main Engine Filter - Isolating Valve	Engine Room	OPEN
SG-0-545	Dual Static FO Main Engine Filter - Feeding	Engine Room	To Static Filter
SG-0-546	FO Main Engine - Return	Engine Room	To Serv. Tank
SG-0-547	Single Static FO Genset Filter - Isolating Valve	Port Engine Room	OPEN
SG-0-548	Fuel Oil Tank 2 - Filling / Suction (Remote Controlled Quick Closing Valve)	Port Engine Room	OPEN
SG-0-549	Fuel Oil Tank 2 - Water Draining	Port Engine Room	SHUT
SG-0-550	Fuel Oil Tank 1 - Water Draining	Stbd Engine Room	SHUT
SG-0-551	Fuel Oil Tank 1 - Filling / Suction (Remote Controlled Quick Closing Valve)	Stbd Engine Room	OPEN
SG-0-553	Fuel Oil Tank 5 - Filling / Suction (Remote Controlled Quick Closing Valve)	Fwd Engine Room	OPEN
SG-0-554	Fuel Oil Tank 5 - Water Draining	Fwd Engine Room	SHUT

5-3-7-1. Storage Tanks filling from Shore

To replenish fuel oil tanks from the deck connection (Port Side) it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SG-0-502	Fuel Oil Discharge Filter - Isolating Valve	Port Engine Room	OPEN
SG-0-503	Fuel Oil Suction Filter - Isolating Valve	Port Engine Room	OPEN
SG-0-521	Fuel Oil Tank 1 - Filling	Port Engine Room	
SG-0-523	Fuel Oil Tank 1 - Filling	Port Engine Room	OPEN
SG-0-525	Fuel Oil Tank 5 - Filling	Port Engine Room	OPEN
SG-0-531	Fuel Oil Tank 2 - Filling	Port Engine Room	OPEN

5-3-7-2. Transfer N°5 Storage Tank to N°4 Storage Tank (for example)

To replenish fuel oil storage tanks N°4 from fuel oil storage tanks N°5, it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SG-0-524	Fishing Hold Room FO Tank 5 - Suction	Port Engine Room	OPEN
SG-0-527	Port Engine Room Tank 4 - Filling	Port Engine Room	OPEN

Figure 5-16 Port Engine Room - FO Transfer Pump and Centrifugal Separator

Figure 5-17 Main Switchboard - FO Transfer Pump Control Panel

Figure 5-18 Engine Room - FO Transfer Pump Remote Control Panel

5-3-7-3. Operating of FO transfer pump from the Main Switchboard or from the Remote Control Box, both located in engine room

Close the circuit breaker D07 in the Main Switchboard EF-0-001.

Press the red push-button to stop the pump normally.

In the event of any problem, press the "Emergency stop button" to stop and lock the FO pump. The FO pump will not re-start when the button is locked. To unlock, turn the button clockwise in order to reset.

Figure 5-19 CO2 Room - FO Quick Closing Valves

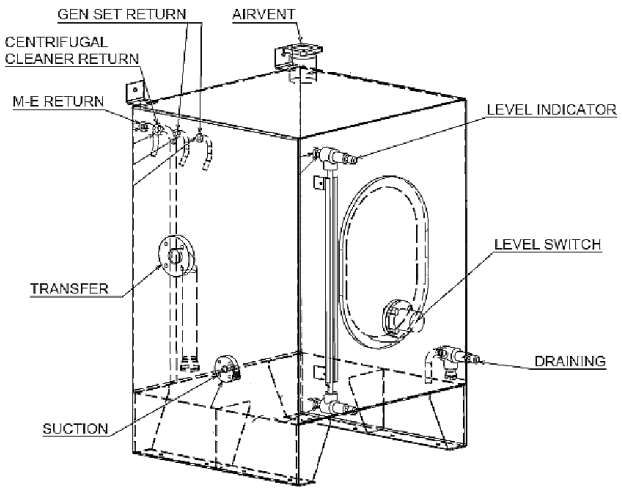

Figure 5-20 Engine Room - Fuel Oil Service Tank

5-3-7-4. Operating of FO centrifugal separator

Close the circuit breaker D28 in the Main Switchboard EF-0-001 to supply the separator.
On the control panel of separator, press the push-button (keep the button pressed 3 - 4 seconds) to start the separator.

5-3-8. Lubricating Oil Transfer System

The following table show the valves position to be set to operate the lubricating oil system when the machinery equipment are in normal operation and no lub.oil transfer is to be operated:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SL-0-502	Polluted Oil Tank - Discharge	Engine Room	SHUT
SL-0-503	Polluted Oil Tank - Suction	Engine Room	SHUT
SL-0-504	Polluted Oil Tank - Draining	Engine Room	SHUT
SL-0-506	Polluted Oil Tank - Funnel Discharge	Engine Room	SHUT
SL-0-507	Polluted Oil Tank - Filling	Engine Room	OPEN
SL-0-508	New Lub. Oil Tank - Tapping cock	Engine Room	SHUT
SL-0-509	New Oil Filling - Filter Isolating Valve	Engine Room	SHUT
SL-0-511	New Oil Filling - Filter Isolating Valve	Engine Room	OPEN
SL-0-512	Polluted Hand Pump - Suction	Engine Room	SHUT
SL-0-514	Condensate Trap - Discharge (ME Crankcase Breather)	Main Deck	OPEN
SL-0-516	Genset Polluted Oil - Discharge	Port Engine Room	SHUT

5-3-8-1. Storage new oil tank filling from Shore

To replenish lubricating oil tank from the filling station (Port Side) it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SL-0-509	Lub. Oil Filling Station - Discharge (Inlet Filter)	Engine Room	OPEN

5-3-8-2. Draining of Genset Polluted Oil

To drain polluted oil from Genset it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SL-0-516	Port Genset Polluted Oil - Discharge	Port Engine Room	OPEN

5-3-8-3. Polluted oil tank discharge

To drain polluted oil from polluted oil tank it is necessary to operate the valves as indicated in the table below:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
SL-0-502	Polluted Oil Tank - Discharge	Engine Room	OPEN
SL-0-503	Polluted Oil Tank - Hand Pump Suction	Engine Room	OPEN

All transferring operations are performed by hand pumps.

Figure 5-21 Stbd Engine Room - Lubricating oil Transfer Hand Pump

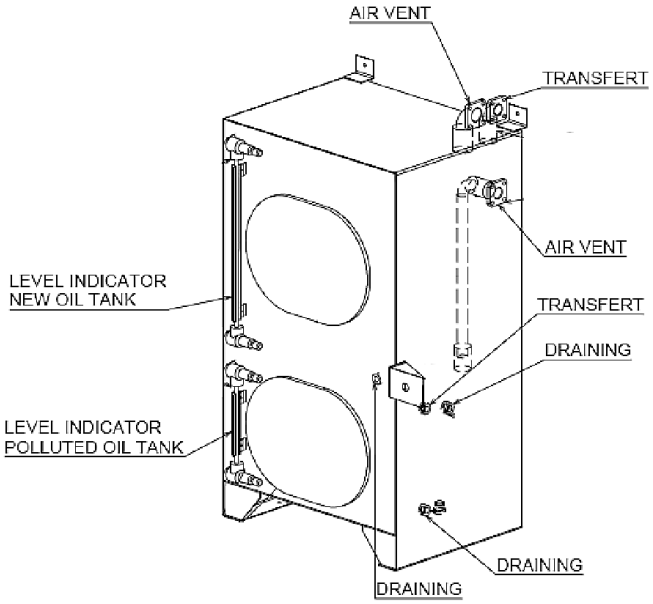

Figure 5-22 Engine Room - New Oil & Polluted Oil Tanks

5-3-9. CO2 Firefighting System

5-3-9-1. CO2 Firefighting System

The CO2 Firefighting System is located in the CO2 Storage Room in the main deck alleway.
The CO2 Firefighting System protects the engine room and workshop.

The CO2 Firefighting system includes mainly:

- Two pressurized gas cylinders of 50 litre each equipped with manual / pneumatic valve. The cylinder 1, equipped with a mechanical release lever allows the release of the cylinder 2 by CO2 pressure
- One pressure meter
- One isolating valve
- One pressure switch fitted on a closed manifold and connected to ship alarm monitoring system to detect CO2 cylinders leaking
- Two visual and audible alarms

The opening of CO2 room door causes tripping of visual and audible alarms in engine room and workshop.

Figure 5-23 CO2 Cylinders 1 and 2

Figure 5-24 Mechanical Release Lever (Cylinder 1) and Pneumatic Release (Cylinder 2)

Figure 5-25 CO2 Isolating Valve

5-3-9-2. Standby Operation

The both cylinders are charged with 50kg CO2.
The mechanical release lever is armed and secured by pin.
The isolation valve is shut.
The CO2 manifold is closed at 0 bar pressure.
In case of cylinder leaks in closed manifold, alarm is activated in wheelhouse.

5-3-9-3. Firefighting Operation (in the event of engine fire)

Open the door of the CO2 storage room.

- Alarms are activated in engine room and workshop,
- Ventilation is shutdown in engine room and workshop,
- "CO2 DOOR OPENED" alarm on the wheelhouse monitoring panel is activated,
- Actuate the both FO quick closing valves.
- Ensure that engine room and workshop are clear of personnel.
- Close all the openings; engine room air intake included.
- Wait approximately 30 seconds.
- Open manually the CO2 isolating valve (top of CO2 cylinder 1).
- Remove pin of Pilot Cylinder Valve.
- Actuate manually the CO2 Pilot Cylinder Valve by sharply pulling the lever on top of the valve.
- The pressure of pilot cylinder activates the CO2 cylinder 2.
- CO2 of both cylinders is discharged ion the machinery space.

THE CO2 CONCENTRATION MUST BE RETAINED WITHIN THE MACHINERY SPACE DURIN 20 MINUTES FOR MINIMUM.

DO NOT RE-ENTER THE AREA AS IT IS NOT CONSIDERED TO BE SURE.

5-3-10. AC 400V-3-50Hz Production Network

The 400V-50Hz electrical outputs of the shaft generator, the genset and shore supply connection are supplied via Motor Controlled Circuit Breakers (MCCB) to individual busbar sections of the Main Switchboard EF-0-001 located in Engine Room.

Main Electrical Switchboard EF-0-001 - AC 400V Supply Cell

Circuit Breaker	Nb. of Poles	Rating (Amps)	Supplier	Consumer Index	Location
CB1	4	160A	Shaft Generator - Output	ED-0-001	Engine Room
CB2	4	80A	Generator Set - Output	ED-0-002	Engine Room
CB3	4	80A	Shore Supply Socket - Output	EF-0-002	Main Deck Alleyway
Q1	4	6A	Multi-Measurement - Input Voltage		
Q2	4	6A	Multi-Measurement - Genset Input Voltage	ED-0-002	Engine Room
Q3	4	6A	Multi-Measurement - Shaft Generator Input Voltage	ED-0-001	Engine Room
Q4	4	4A	Multi-Measurement - Busbar Input Voltage		

5-3-10-1. General

The shaft generator is driven by the reduction gearbox of the propulsion plant.

The installation of the 100kVA shaft generator requires that the propulsion engine is constantly running at its rated speed.

To power the network at 50Hz frequency, the shaft generator driven by the propulsion plant, must turn at the fixed regime of 1500rpm.

The shaft generator is driven by a constant PTO drive (ratio 1.0795 / 1) at 1500rpm corresponding to a nominal engine regime of 1619rpm.

The Genset is started manually, either locally or from the whellhouse.

In case of overload, an automatic load shedding is performed.

The frequency control is provided by two buttons "SPEED +" & "SPEED -"

Figure 5-26 Main Electrical Switchboard - Production Cell

5-3-11. AC 400V-3-50Hz Distribution Network

All 440V supplies to ship services are provided by a switchboard distribution section located on the right of the main switchboard EF-0-001 located in the engine room.
Electrical distribution of AC400V is realized according to the following electrical distribution table:

Main Electrical Switchboard EF-0-001 - AC 400V Distribution Cell

Circuit Breaker	Nb. of Poles	Rating (Amps)	Consumer	Consumer Index	Location
D01	3	10A	Steering Gear Starter Panel - Pump 1	QB-0-001	Steering Gear Room

5-3-12. AC 230 Distribution Network

All 230V supplies to ship services are provided by:
- A switchboard distribution section located on the centre of the main switchboard EF-0-001,
- An engine room distribution panel EE-0-001
- A wheelhouse distribution frame EE-0-002
- A workshop distribution panel EE-0-003

Electrical distribution of AC230V is realized according to the following electrical distribution tables:

Main Electrical Switchboard EF-0-001 - AC 230V Distribution Cell

Circuit Breaker	Nb. of Poles	Rating (Amps)	Consumer	**Consumer Index**	Location

5-3-14. Electrical Plant

5-3-14-1. Starting of the Genset

Before starting, ensure that pre-operational checks on the generators and generator engines are performed, mainly for:

- Sea Water Cooling System
- Fuel Oil supply
- Oil and Coolant levels

Do not start any engine if there is a warning tag attached to the start panel.

- Main electrical Switchboard EF-0-001
- Ensure that the selector "SWITCHBOARD LIGHTING" is on the "ON" position. The facade of the switchboard will remain lighted during the blackout

- Minimize electrical load before starting

Starting Genset from Engine Room

- On GENSET wheelhouse Remote Control Panel
  - Ensure that the START knob of GENSET is on the "STOP" position

- GENSET Control Panel
  - Switch the battery master key to the "ON" position
  - Turn the START knob to "RUN" position. The engine do not starts when knob is on "AUTO" position

  => The engine starts

Starting from Wheelhouse

- GENSET Control Panel
  - Switch the battery master key to the "ON" position
  - Turn the START knob to "AUTO" position

- GENSET Wheelhouse Remote Control Panel
  - Turn the knob to the "RUN" position

  => The engine starts

Figure 5-27 Main Electrical Switchboard - Production Cell

Figure 5-28 Genset - Battery Mastey Key

Figure 5-29 Genset - Control Panel

Figure 5-30 Genset - Bridge Remote Control Panel

After starting engine

- Check that engine parameters are nominals
- Run the engine at no load before connect the generator with the main switchboard until the coolant temperature warms up
- Check for any fluid leaks and air leaks at idle rpm and at one-half full rpm before operating the engine under load

5-3-14-2. Stopping of the Genset

Emergency shutoff controls are for emergency use ONLY. Do not use emergency shutoff devices or controls for normal stopping procedure.

- Main electrical Switchboard EF-0-001
  - Remove the load from the Genset

Normal Stopping Genset from Engine Room

- GENSET Control Panel
  - Turn the START knob to "AUTO" position

  => The engine stops

Normal Stopping Genset from Wheelhouse

- GENSET Remote Control Panel
  - Turn the START knob to "STOP" position

  => The engine stops

Emergency Stopping of Genset

- Emergency Stopping from GENSET Control Panel
  - Press the RED emergency "STOP" pushbutton

  => Alarm sounds and lights on both control panels

  => The engine stops
  - Inhibit sounds with mute switch

  The engine will not re-start when the button is locked. Turn the button clockwise in order to reset.

- Emergency Stopping from GENSET Remote Control Panel
  - Press the RED emergency "STOP" pushbutton

  => Alarm sounds and lights on both control panels

  => The engine stops
  - Inhibit sounds with mute switch

  The engine will not re-start when the button is locked. Turn the button clockwise in order to reset.

5-3-14-3. Switching to Genset Supply Power

The ship is considered electrically powered by shore supply.

- Main electrical Switchboard EF-0-001
  - Call warning of black-out to connect the onboard power supply
  - Open the shore circuit breaker by pressing the black push button "OPENING CIRCUIT BREAKER SHORE SOCKET"

  => The ship loses momentarily AC400V and AC230V power
  - Close the genset circuit breaker by pressing the black push button "CLOSING CIRCUIT BREAKER GENSET"

  => The genset supply the busbar of the main switchboard
  - Check the multi-measurement unit for correct voltage and frequency
  - Manage manually the speed and frequency by pressing on black push buttons "SPEED+" or"SPEED-" to equilibrate 50Hz frequency

  => In case of overload, an automatic load shedding is performed.

Overload Situation

If such situation occurs despite the automatic downloading of certain consumers, it is necessary to minimize the electrical load and remake the start cycle of Genset.

5-3-14-4. Switching to Shaft Generator Supply Power

The ship is considered electrically powered by Genset.

The main engine is considered running at the nominal speed of 1619rpm

- Main electrical Switchboard EF-0-001
  - Call warning of black-out to connect the onboard power supply
  - Open the Genset circuit breaker by pressing the black push button "OPENING CIRCUIT BREAKER GENSET"

  => The ship loses momentarily AC400V and AC230V power
  - Close the Shaft Generator circuit breaker by pressing the black push button "CLOSING CIRCUIT BREAKER SHAFT GENERATOR"

  => The shaft generator supply the busbar of the main switchboard
  - Check the multi-measurement unit for correct voltage and frequency

5-3-14-5. Switching to Shore Supply Power

- Connect shore supply cable to shore socket
- Call warning of black-out to connect the onboard power supply
- Main electrical Switchboard EF-0-001
  - Remove or minimize the load from the Genset
  - Open the Genset circuit breaker by pressing the black push button "OPENING CIRCUIT BREAKER GENSET"

  => The ship loses momentarily AC400V and AC230V power

- Close the shore supply circuit breaker by pressing the black push button "CLOSING CIRCUIT BREAKER SHORE SOCKET"

=> The shore supply the busbar of the main switchboard

- Check the multi-measurement unit for correct voltage and frequency

=> The protective overload and reverse relay ensure that 3-phase current and phase voltage is correct

- Stop the Genset

5-3-15. Ship's Alarms & Monitoring Devices

The alarms & monitoring devices includes:
- One Bilge Alarm Panel MO-0-001 located on the stbd bridge desk
- One General Alarm Panel MO-0-003 located on the stbd bridge desk
- One Bridge Navigational Watch Alarm Box EB-0-138 located on the main bridge desk
- One Navigation Lights Monitoring & Control Panel ES-0-001 located on the stbd bridge desk
- One Fire Detection Panel SI-0-001 located
- One Rudder Angle Indicators NL-0-023 located on the main bridge desk

5-3-15-1. Bilge Alarm Panel MO-0-001 - Marinelec ALTOR 8

The ALTOR 8 is equipment designed to monitor the status of 8 flooding level sensors and to generate an audible and visual alarm when the sensor changes state.
In order to dispense with intemperstives alarms, a timer is programmable on all channels.

Figure 5-31 Bridge - Bilge Alarm Panel

ALTOR 8 Alarm Configuration

Channel 1	Flooding Water Level - Fish Hold Room	HIGH BILGE - FISH HOLD
Channel 2	Flooding Water Level - Fore Engine Room	HIGH BILGE - MACHINERY ROOM FORE
Channel 3	Flooding Water Level - Aft Engine Room	HIGH BILGE - MACHINERY ROOM AFT
Channel 4	Flooding Water Level - Storage Room	HIGH BILGE - STORAGE ROOM
Channel 5	Flooding Water Level - Steering Gear Room	HIGH BILGE - STEERING GEAR ROOM
Channel 6	Not programmed	
Channel 7	Not programmed	
Channel 8	Not programmed	

5-3-15-2. General Alarm Panel MO-0-003 - Marinelec ALTAÏR 16V2 type

The ALTAÏR 16V2 is equipment designed to monitor the status of 16 dry sensors and to generate an audible and visual alarm when the sensor changes state.

Figure 5-32 Bridge - General Alarm Panel

ALTAÏR 16V2 Alarm Configuration

Channel	Function	Alarm Message
Channel 1	Low Level - Fuel Oil Storage Tank DT2 (Port Storage Room)	LAL - FO TANK PORT
Channel 2	Low Level - Fuel Oil Storage Tank DT1 (Stbd Storage Room)	LAL - FO TANK STBD
Channel 3	High Level - Fuel Oil Storage / Overflow Tank C T2 (Port Engine	LAH - FO / OVERFLOW TANK PORT
Channel 4	Low Level - Fuel Oil Storage / Overflow Tank C T2 (Port Engine	LAL - FO / OVERFLOW TANK PORT
Channel 5	High Level - Fuel Oil Service Tank C R1 (Port Engine Room)	LAL - FO / SERVICE TANK
Channel 6	High Level - Fuel Oil Storage / Overflow Tank C T1 (Stbd Engine	LAL - FO / OVERFLOW TANK STBD
Channel 7	Low Level - Fuel Oil Storage / Overflow Tank C T1 (Stbd Engine	LAH - FO / OVERFLOW TANK STBD
Channel 8	Low Level - Fuel Oil Storage Tank B T10 (Fish Hold Room)	LAL - FO TANK FORE
Channel 9	Low Level Fresh Water Tank A T10 (Fore Peak)	LAL - FRESH WATER TANK FORE
Channel 10	Low Level Fresh Water Tank D T10 (Fwd Storage Room)	LAL - FRESH WATER TANK AFT
Channel 11	Insulation Fault - Main Switchboard EF-0-001	INSULATION FAULT - EF-0-001
Channel 12	Insulation Fault - Distribution Frame DC24V Wheelhouse EB-0-007	INSULATION FAULT - EB-0-007
Channel 13	Troubleshooting - Main Battery Charger EB-0-001	MAIN BATTERY CHARGER FAULT
Channel 14	Low Level Stern Tube Lubricating Oil Tanks (Workshop & Storage Room)	LAL - STERN TUBE LUBE OIL TANK
Channel 15	Low Pressure in CO2 Bottles	CO2 LEAK ON BOTTLE
Channel 16	CO2 Room Door Switch	CO2 DOOR OPENED

Notes: LAL => Low Alarm Level at 30% Tank Capacity
LAH => High Alarm Level at 90% Tank Capacity

Figure 5-33 Bridge - Navigational Watch Alarm

5-3-15-3. Bridge Navigational Watch Alarm Box EB-0-138 - Marinelec LYNX V3S

The Bridge Navigational Watch Alarm System (BNWAS) detects the operator disability.
The BNWAS has to be reset periodically with a push button.

5-3-15-4. Navigation Lights Monitoring & Control Panel ES-0-001 - Marinelec NORMA 14CPDC

The NORMA 14CPDC is navigation lights control and alarm system.
It allows monitoring and controlling 14 navigation lights rated.
Navigation Lights are controlled from a remote control panel.

NORMA 14CPDC Alarm Configuration

Alarm	Function
Red LED	Navigation Light Failure
Yellow LED	NORMA System Failure

Figure 5-34 Bridge - Navigation Lights Monitoring & Control Panel

5-3-16. Main propulsion Engine

5-3-16-1. Monitoring and Control System

The monitoring and control system includes in engine room:

- One Caterpillar MECP-1 Engine Control Panel

and in wheelhouse:

- One Caterpillar Engine Remote Control Panel
- One Kobelt Bridge Mechanical Control Head (Lever) actuating an Electronic Clutch Control Potentiometer

Figure 5-35 Bridge - MECP-1 Engine Control Panel

Figure 5-36 Bridge - Engine Remote Control Panel

Figure 5-37 Bridge Mechanical Control Head

Figure 5-38 Engine Room - ME Battery Master Key

5-3-16-2. Starting of the Main Propulsion Engine

Before starting, ensure that pre-operational checks on the main engine are performed, mainly for:

- Sea water cooling system
- Fuel oil supply system
- Oil and coolant levels for main engine

Ensure that valves of fuel oil and sea water cooling systems are correctly operated.
Do not start main engine if there is a warning tag attached to the start panel.

The main engine can be started locally (engine room) or remotely from wheelhouse.
To allow starting up from the wheelhouse, switch the selector of the MECP-1 engine room panel in "Remote" position.
On the engine remote control panel (wheelhouse), the selector "SHUTDOWN OVERRIDE" prevents the automatic engine shutdown in event of alarm.

Start main propulsion engine as follows:

Local Starting

- Switch the battery master key to the "ON" position
  - ➢ Bridge Mechanical Control Head
    - Ensure that control lever is at NEUTRAL position
  - ➢ MECP-1 Engine Control Panel
    - Select the "OFF/MANUAL/REMOTE" switch to the "MANUAL" position
    - Push the green "START" button to start the engine

    => The engine starts

Starting from Wheelhouse

- Switch the battery master key to the "ON" position
  - ➢ MECP-1 Engine Control Panel
    - Select the "OFF/MANUAL/REMOTE" switch to the "REMOTE" position
  - ➢ Bridge Mechanical Control Head
    - Ensure that control lever is at NEUTRAL position
  - ➢ Engine Remote Control Panel
    - Turn the Key Switch in the "START" position to start the engine.

    => The engine starts

After starting engine

- Run the engine at no load to warm-up during five minits approximately
- Check that engine parameters are nominals
- During warm-up phase, check for any fluid leaks and air leaks at idle rpm
- Observe the water discharge at the sea water outlet. If water discharge is not visible or the water flow is restricted, stop the engine immediately and inspect sea water cooling system

5-3-16-3. Stopping of the Main Propulsion Engine

Emergency shutoff controls are for EMERGENCY USE ONLY. Do not use emergency shutoff devices or controls for normal stopping procedure.
Stopping the engine immediately after it has been working under load can result in over heating and accelerated wear of the engine components.
If the engine has been operating at high rpm and/or high loads, run at low idle for least three minutes to reduce and stabilize internal engine temperature before stopping the engine.
Avoiding hot engine shutdowns will maximize turbo-charger shaft and bearing life.

Normal Local Stopping

- From MECP-1 Engine Control Panel
  - Decrease the engine rpm to no more than 50 percent of the rated rpm for 3 to 5 minutes in order to cool the engine
  - Reduce the engine rpm to low idle
  - Push the "STOP" red button to stop the engine
    => The engine stops

Emergency Stopping from Wheelhouse Engine Remote Control Panel

- Push the "EMERGENCY STOP" red button to stop the engine. The main engine will not re-start when the button is locked. To unlock, turn the button clockwise in order to reset.

5-3-16-4. C32 Engine and C4.4 Genset Engine – Event Codes

The Electronic Control Module (ECM) monitors the operating parameters of the engine.
The ECM will generate an event code if a specific engine parameter exceeds an acceptable range that is defined by the engine monitoring system.
For information on the engine monitoring system, refer to Troubleshooting of Caterpillar Operation and Maintenance Manuals of C32 and C4.4 engines, "Engine Monitoring System".

Event codes are generated when abnormal operating conditions exist.
The table is a list of the event codes for the engine.
The event codes are cross-referenced with the appropriate procedure that can be used to troubleshoot the code.

Code	Warning Category Indicator	SPN-FMI Code	Description	Troubleshooting Procedure	Default
1-5		651-5	Cylinder #1 Injector Current Above Normal	Troubleshooting, "Injector Solenoïd - Test"

5-3-17. Operating Procedure of Marine Transmission

5-3-17-1. General

The monitoring and control system includes in wheelhouse:

- One Masson Pitch Propeller Remote Control Panel
- One Masson Gearbox Clutching Remote Control Panel
- One Kobelt Bridge Mechanical Control Head (Lever)

The electronic controller provides the interface between the Bridge Mechanical Control Head and the propulsion system, engine, gearbox and propeller.
The central unit of the transmission system processes and executes the clutch request and increase or decrease propeller pitch.
The Bridge Mechanical Control Head is a single mechanical control lever that allows two functions:

- A first detent of the lever engages the propeller clutch (which is always at engine idle)
- A second detent of the lever allows increase the engine speed to achieve the rated engine speed of 1619 rpm.

This engine speed allows to cause the shaft generator to a very close speed of 1500rpm necessary for obtaining the 50Hz frequency (shaft generator 1499.7rpm for engine 1619rpm).
The forward and reverse being ensured by variation of propeller pitch, the Bridge Mechanical Control Head has no "reverse" function.
The variation of the propeller pitch forward or backward is made using a joistick on the Pitch Propeller Remote Control Panel on the left of the Bridge Mechanical Control Head.
This panel includes a display of the pitch and a red indicator light for motor overload.
A second panel, to the right of the Bridge Mechanical Control Head, indicates the permission or not to engage the clutch of the propeller. The permission of clutching is indicated by the blue indicator light.

This clutching panel also includes a red emergency stop push button of the propeller and a red fault indicator light of the gearbox.

5-3-17-2. Operating

Before starting, ensure that pre-operational checks on the reverse / reduction gearbox and shafting line are performed, mainly for:

- Oil level for gearbox
- Oil levels for forward and stern tubes of propeller shaft

Ensure that valves of sea water cooling system are correctly operated.

The procedures for starting up the main engine being carried out and the main engine idling speed since a few minutes:

- Bridge Console
  - Make sure you have permission to engage the clutch of propeller shaft (blue indicator light lit on the clutch panel)
    => If the blue indicator light is not lit, investigate the cause (mechanical lock of the propeller shaft remains in place or clutch selector of gearbox remains in NEUTRAL position)
  - Push the lever of the Mechanical Control Head in the first detent
    => The gearbox must engage the propeller shaft (the clutching must be engaged between 3 and 6 seconds)
- Engine Room
  - Recheck the gearbox oil level using the dipstick, engine at idling speed.
  - Complete the oil level to the dipstick MAX mark as necessary.
- Bridge Console
  - Wait the complete clutching and push gradually the lever of the Mechanical Control Head thoroughly to reach the nominal engine speed of 1619rpm.

Once this state reached:

- The supply of the network by the shaft generator can be performed
- The control of pitch variation (joystick) is operable; the time required to move from "full ahead" to "full reverse" is of the order of 20-30 seconds.
  => The increase of propeller pitch must be progressive
  => Avoid causing an engine overload (red overload indicator light on Pitch Propeller Remote Control Panel)
  => Check the propeller pitch indicator on the Pitch Propeller Remote Control Panel
  => A red button on the clutch panel, allows the emergency disengagement of the propeller (eighth trawl, by example)

Figure 5-39 Bridge - Pitch Propeller Remote Control Panel

Figure5-40 Bridge - Gearbox Clutching Remote Control Panel

5-3-17-3. Emergency operating of reduction gearbox

In case of failure of the electrical control the engagement and disengagement of the propeller can be done directly by manually acting on the electrically controlled hydraulic distributor (see Masson technical documentation).

- Gear box
  - Disconnect the electric control cable
  - Push the button or screw the knob of the Ahead solenoïd distributor into full engagement
    => The clutch of the propeller should always be at the engine idle speed.

In case of failure of the gear hydraulic system, the clutching of propeller can be done mechanically using "come-home screws" device (see Masson technical documentation)

  - Transfer the power supply on Genset
  - Stop the propulsion engine
- Bridge Console
  - Disconnect the electric Mechanical Control Head cable to prevent accidental clutching
- Gear box
  - Install the "come-home screws" device as indicated in the technical documentation Masson
  - Start the propulsion engine and sail at very low speed
    => The lubrication of the gear being reduced, monitor the gearbox oil temperature
    => At port arrival, remove the device "come-home screws" to prevent damage

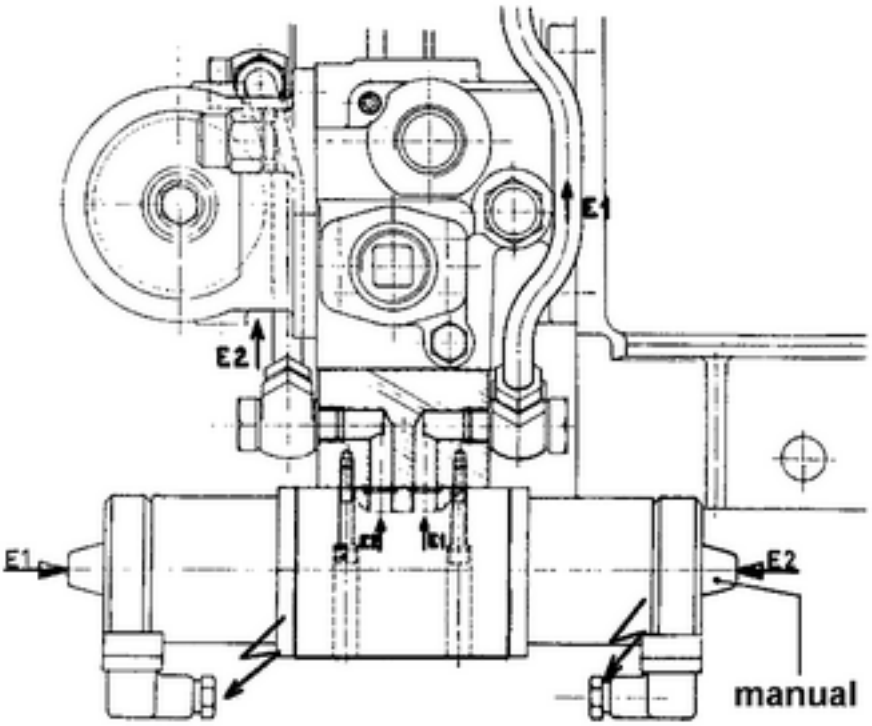

Figure 5-41 Engine Room - Manual Clutching of Propeller Shaft

5-3-17-4. Emergency operating of Controllable Pitch Propeller

In case of failure of the hydraulic system of CPP, the variation of pitch of the propeller can not be carried

In this case, a mechanical locking at maximum pitch is available

- Transfer the power supply on Genset
- Stop the propulsion engine

- Propeller Shaft Cylinder
  - Use the manual emergency pump and its hose set (Masson P/N 500291)
  - Remove A and B plugs from the cylinder
  - Connect the hoses to the holes of the propeller shaft cylinder / hydraulic cylinder (connect P mark of the pump to B mark of the cylinder and connect R mark of the pump to A mark of the cylinder)
  - Pump in order to achieve the maximum ahead pitch
  - Align the holes of the coupling sleeve with the holes of the collar pitch repeater
  - Mount and tighten the 4 CHc screws
  - Disconnect the hoses and mount the both plugs on shaft cylinder
  - Start the propulsion engine, clutch and sail at very low speed
    => Warning the gearbox does not have reverse, no maneuver up is possible
    => At port arrival, remove the device to prevent damage

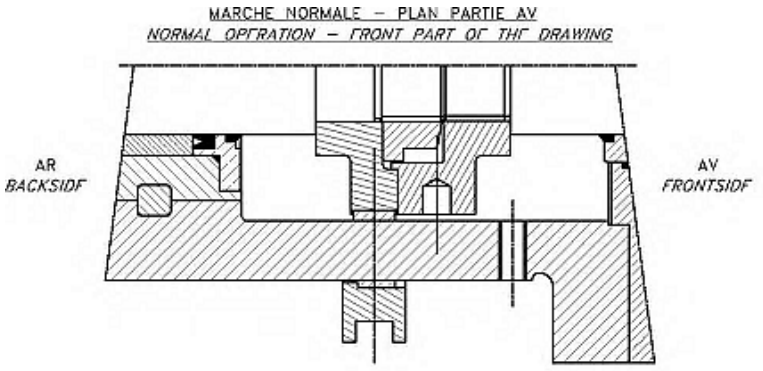

Figure 5-43 Engine Room - Mechanical locking of Propeller Pitch

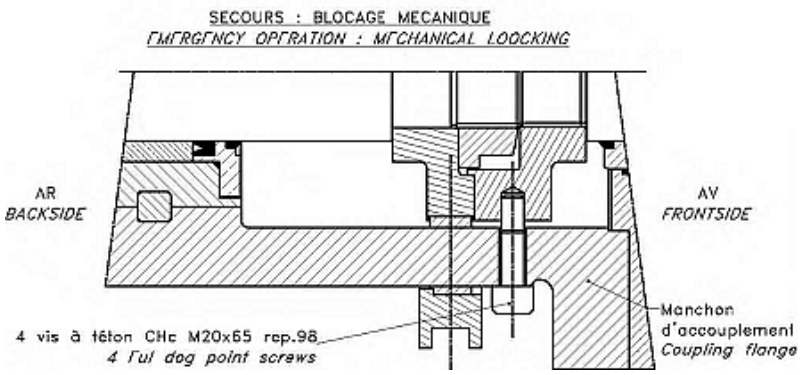

5-3-18. Sea Water Cooling System

The engine and the gensets sea water system valves should be in the open position as indicated in the following table:

VALVE N°	VALVE DESCRIPTION	VALVE LOCATION	VALVE POSITION
MM-0-501	Stbd Sea Chest - Sea Water Cooling Intake (Remote Controlled)	Stbd Engine Room	OPEN
MM-0-502	Port Sea Chest - Sea Water Cooling Intake (Remote Controlled)	Port Engine Room	OPEN
MM-0-505	Stbd Sea Water Cooling Strainer - Outlet	Stbd Engine Room	OPEN
MM-0-506	Port Sea Water Cooling Strainer - Outlet	Port Engine Room	OPEN
MM-0-507	Stbd Sea Chest - Air Vent (Remote Controlled)	Stbd Engine Room	OPEN
MM-0-508	Port Sea Chest - Air Vent (Remote Controlled)	Port Engine Room	OPEN
MM-0-509	Genset Sea Water Cooling - Overboard Discharge	Port Engine Room	OPEN
MM-0-511	Main Engine Sea Water Cooling - Overboard Discharge	Port Engine Room	OPEN
MM-0-513	Main Engine Sea Water Cooling - Suction	Engine Room	OPEN
MM-0-515	Fishing Gear Hydraulic Power Pack Sea Water Cooling - Overboard Discharge	Engine Room	OPEN
MM-0-517	Genset Sea Water Cooling - Suction	Engine Room	OPEN
MM-0-519	Fishing Gear Hydraulic Power Pack Sea water Cooling Pump - Suction	Engine Room	OPEN
MM-0-520	Fishing Gear Hydraulic Power Pack Sea water Cooling Pump - Discharge	Engine Room	OPEN

Figure5-44 Engine Room -Fishing Gear SW Cooling E-Pump

Figure5-45 Engine Room - SW Strainer

5-3-18-1. Starting of Fishing Gear sea water cooling pump

- Close the circuit breaker D18 in the Main Switchboard EF-0-001
  => The sea water cooling pump is automatically started when the fishing gear hydraulic pump is clutched

5-3-19. Operating Procedure of Hydraulic Fishing Gear

5-3-19-1. General

The Trawler is equipped with the following fishing equipment:

- Two warp winches
- One single and one double net drums, fitted on stern gantry
- One storage drum
- One Gilson winch

Winches and drums are driven by a hydraulic system including the main following equipment:

- One hydraulic pump with 6 independent flows
- One hydraulic 700 liters tank with filtration and oil cooler
- One electrical control box at fishing desk
- One deck control panel

The hydraulic pump is driven by the propulsion plant via a the clutchable PTO of the gear box
When ship is sailing, or when fishing gear is not used, the PTO clutch is not engaged
The control panel, located on the fishing deck, provides simultaneous function of:

- The hydraulic pump by engaging the PTO clutch of the gearbox
- The sea water cooling E-pump MM-0-001

The flow rate of the hydraulic pump is divided into two flows, each feeding a hydraulic control valve:
One feeding:

- The warp winch portside
- The storage drum portside
- The double drum

and another:

- The warp winch stbd
- The Gilson winch
- The single drum

A deck control panel located on the fishing deck controls the operation of various winches and drums

5-3-19-2. Starting of fishing gear

The ship is considered sailing, propulsion engine running at its rated speed
Before starting, ensure that pre-operational checks on the hydraulic plant are performed, mainly for:

- Oil level of hydraulic tank
- Correct position of sea water cooling valves

➢ Electrical control box

- Push the green "1" button to start the hydraulic pump

=> The gearbox must engage the PTO clutch
=> The sea water cooling E-pump MM-0-001 runs

- Survey indicator lights of low level and high temperature of oil tank

➢ Deck control panel

- Each control handle is assigned to a winch or a drum. An action on the joystick in one direction or the other puts the winch drum or moving Each control handle iAn action on the other puts the winch drum or moving the winch drum or moving

5.3.19.3 Stopping of fishing gear

Normal stopping of the hydraulic system and cooling pump

- Push the red "0" button to stop the hydraulic pump
  => The gearbox must disengage the PTO clutch
  => The sea water cooling E-pump MM-0-001 stops

Emergency stopping of the hydraulic system and cooling pump
=> This action causes the same effect as normal stopping except that the "punch"button remains engaged

5.3.19.4 Emergency operating of fishing gear

Figure5-46 Engine Room - Hydraulic Pump for Fishing Gear

Figure5-47 Fishing Deck - Fishing Gear Electrical Panel

Figure5-49 Store Room - Fishing Gear Hydraulic Distributor

CHAPTER 6 – MAINTENANCE SCHEDULE

6-1. GENERAL INFORMATION

The content of the maintenance schedule prepared for each equipment or sub-assembly maintainable is precisely described with the following information:

- Reference to the equipment of the SEL with its Ship Index
- A job number for each maintenance task
- A synopsis of each maintenance task
- The periodicity of each task
- The requirements in tools and spare when required
- A link to the Maker's Documentation or to the Ship's Information Handbook when the maintenance instructions are detailed
- An estimating man hours for each
- The number of units fitted onboard

The Maintenance Schedule is presented by discipline.

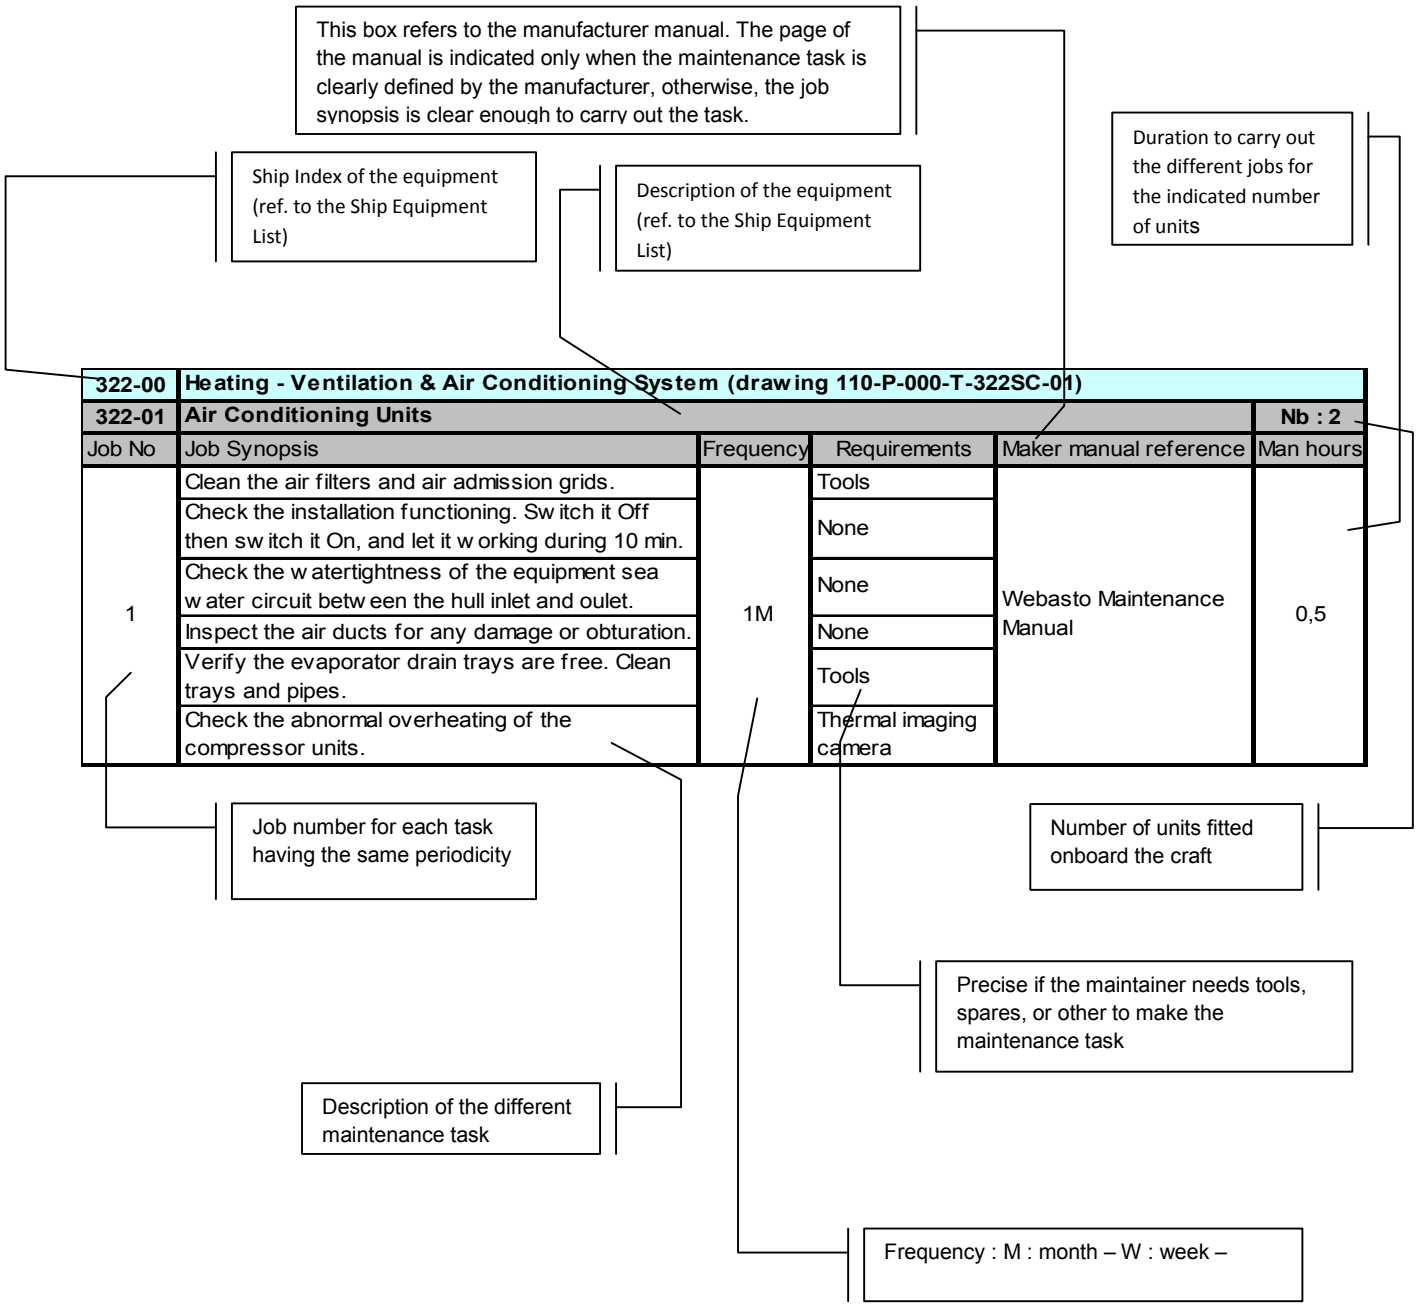
All equipment of the Ship Equipment List having periodically maintenance operation is listed in this Schedule. When a Ship Index is missing in this Schedule, it means there is no maintenance task on the equipment.

6-2. ASSUMPTIONS USED TO ELABORATE THE MAINTENANCE SCHEDULE

This maintenance Schedule is based on the standard maintenance plans, the service manuals of manufacturers and specific practices of the shipyard recommended for this category of ships.
The schedule, at which the maintenance instructions should be carried out, can be expressed on daily, weekly, monthly, yearly and/or on a running hour basis.
In the case of a double frequency (calendar / running hours), the first reached must be taken into consideration.
If the ship or some mechanical equipment (mainly diesel engine) must be subject to extreme operating conditions, the service frequency must be adapted accordingly.

Fluids and lubricants recommended by the OEM are listed in Lubricant Schedule Table § 6-9.
Compliance with these recommendations is essential to ensure a long life to systems and equipment, particularly diesel engines, gear boxes and hydraulic systems.
The recommendation and the first filling were mostly made with genuine products SHELL.
In order to facilitate the supply of lubricants, a correspondence with TOTAL products was made.

6-3. FUNCTIONING PRINCIPLE OF MAINTENANCE SCHEDULE TABLE



6-4. ANCILLARIES OF HULL

210-00	Hull				
210-00	**Underwater Hull**				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Examine the general condition of the coating and of any area where deterioration has exposed bare metal. In areas where superficial deterioration of the paint coatings has occurred, remove all loose paint and apply touch up coats of the appropriate paint to restore correct dry film thickness.	3M / At Each Dry Dock Inspection	Respect Paint Scheme	Shipyard recommendation	4
2	Examine structure for mechanical damage, fractures, rust blisters and pitting.	1Y	None	Shipyard recommendation	2
210-01&02	**Zinc Anodes - Hull**				Nb : 8+6
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check the 8x1,2kg, the 6x5,9kg and zinc sacrificial anodes and replace it if they have greater than 2/3 wastage.	3M / At Each Dry Dock Inspection	None	DWG 133-F-Z00-S-21000-05 DWG 133-F-M01-P-210MM-01	0,5
210-03	**Zinc Anodes - Sea Chests**				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check the two zinc sacrificial anodes and replace it if they have greater than 2/3 wastage..	3M3M / At Each Dry Dock Inspection	None	DWG 133-F-Z00-S-21000-05 DWG 133-F-M01-P-210MM-01	2

310-00	Main Deck Arrangement				
310-02	**Gallow of unloading**				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect the unit for evidence of physical damage/deterioration. Lubricate all grease nipples with Multipurpose Extreme Pressure Water Resistant Grease (NLGI 2).	1M	Grease Gun + Grease	DWG 133-F-P02-X-31000-02	0,25
310-10	**Anchoring Line**				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean and grease machined surfaces using Multipurpose Extreme Pressure Water Resistant Grease (NLGI 2).	1M	Grease Gun + Grease	Shipyard recommendation	0,25

314-00	Life saving devices				
314-01	**Inflatable Liferaft**				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Remove and return the liferaft to the manufacturer or qualified service station for the testing and examination.	1Y	None	Resolution IMO A.761 (18)	1
2	Remove and replace the liferaft.	12Y	None	Resolution IMO A.761 (18)	1

314-02	Inflatable Liferaft Release - Hydrostatic				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Remove and replace the Hydrostatic release.	2Y	None	Hammar H-20 Manual	0,5

342-00	Tanks				
342-03	Marine Fuel Oil Service Tank				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	External and internal inspection of tank for any signs of deterioration of paint coating, corrosion and damages. Assess and record the amount and nature of sludge and debris prior cleaning the tank.	5Y	None	Shipyard recommendation	8
342-04	Oily Water Tank				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	External and internal inspection of tank for any signs of deterioration of paint coating, corrosion and damages. Assess and record the amount and nature of sludge and debris prior cleaning the tank.	5Y	None	Shipyard recommendation	8
342-05	Fuel Oil Tanks				Nb : 5
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	External and internal inspection of tank for any signs of deterioration of paint coating, corrosion and damages. Assess and record the amount and nature of sludge and debris prior cleaning the tank.	5Y	Before entering tank, ensure it's fully ventilated	Shipyard recommendation	48
342-06	Fresh Water Tank				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	External and internal inspection of tank for any signs of deterioration of paint coating, corrosion and damages. Assess and record the amount and nature of sludge and debris prior cleaning the tank.	5Y	None	Shipyard recommendation	8

350	Hatches / Doors & Windows				
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Lubricate hinges sparingly with general purpose grease.	3M	None	Shipyard recommendation	0,5
2	Inspect watertight doors and hatches for any signs of obvious damage.	1Y	None	Shipyard recommendation	1

6-5 ELECTRICAL

312-00	Steering Gear				
312-08	Starter Panel				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check the terminals of the electric motor. Test the drop of voltage at the terminals.	1Y	Voltmeter	Shipyard recommendation	0,25

322-00	Heating - Ventilation & Air Conditioning System				
322-02	Air Conditioning Unit 4,7 kW				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the dust filter. Check the free flow of condensates.	1M	None	Webasto Installation & Maintenance Manual	0,25
322-03	Air Conditioning Unit 5,9 kW				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	lean the dust filter. Check the free flow of condensates.	1M	None	Webasto Installation & Maintenance Manual	0,25

341-00	Fire Detection system				
341-02	Fire Detection Panel				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Execute functional test of the installation	1W	Gas Detector	Marinelec Fire Detection Manual DI09	0,5
2	Replace internal 3rd source	1Y	None	Marinelec Fire Detection Manual DI09	1
341-03	Heat/Smoke Detector				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Replace detector	10Y	None	Marinelec Fire Detection Manual DI09	2

365-00	Galley				
365-04	Hood				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the grease filter	1M	None	Faure Technical Data Sheet	0,25

410-00	AC 400V - 50Hz Electrical Network				
410-01	Main Electrical Switchboard				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect, remove dust and test Main Switchboard. Clean or replace Air Filter. Check the fastening screws, nuts, and retighten if necessary.	6M	Portable Vacuum Cleaner Electrical Toll Box	SA2EI Electrical Switchboards Technical Manual	1

410-02	Distribution Panel AC230V Machinery Room				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect and remove dust. Check the fastening screws, nuts, and retighten if necessary.	6M	Portable Vacuum Cleaner Electrical Toll Box	SA2EI Electrical Switchboards Technical Manual	0,5
410-03	**Distribution Frame AC230V Wheelhouse**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect and remove dust. Check the fastening screws, nuts, and retighten if necessary.	6M	Portable Vacuum Cleaner Electrical Toll Box	SA2EI Electrical Switchboards Technical Manual	0,5
410-04	**Distribution Panel AC230V Workshop**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect and remove dust. Check the fastening screws, nuts, and retighten if necessary.	6M	Portable Vacuum Cleaner Electrical Toll Box	SA2EI Electrical Switchboards Technical Manual	0,5

412-00	Generators				
412-03	**Alternator Leroy Somer LSAM 43.2 S25**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check and retight all electric connections as required.	3M	Common tools	Shipyard recommendation	0,5
412-06	**Alternator PTO Driven Leroy Somer ECP34-1/L4 MECCALTE**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check and retight all electric connections as required.	3M	Common tools	Shipyard recommendation	0,5

420-00	DC 24V Electrical Network				
420-01	**Battery Charger - AC230V/DC24V 60A**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean inside of the equipment with a vacuum cleaner; the build-up of dust prevents heat dissipation.	3M	Portable Vacuum Cleaner	Enag User Manual CDS3 Battery Charger	0,25
2	Full inspection, check the tightness of all electrical connections	1Y	Common tools		0,5

420-02	GMDSS Power Supply Box				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean inside of the equipment with a vacuum cleaner; the build-up of dust prevents heat dissipation.	3M	Portable Vacuum Cleaner	Enag GMDSS Power Supply Box Manual July 1st 2009	0,5
2	Full inspection, check the tightness of all electrical connections	1Y	Common tools		1
3	Replace the electronic capacitors	10Y	Common tools		2
420-03	**Gel Battery 12V 165Ah**				**Nb : 2**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the batteries and cables	3M	None	Shipyard recommendation	0,25
2	Check the battery cable terminal fastening and retighten if necessary	6M	Tools		0,25

420-04	Distribution Frame DC24V Wheelhouse				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect and remove dust. Check the fastening screws, nuts, and retighten if necessary.	6M	Portable Vacuum Cleaner Electrical Toll Box	SA2EI Electrical Switchboards Technical Manual	0,5

577-00	Propulsion & Gensets Remote Control & Monitoring Systems				
577-06	AGM Battery 12V 320Ah				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the batteries and cables	3M	None	Shipyard recommendation	0,25
2	Check the battery cable terminal fastening and retighten if necessary	6M	Tools		0,25
577-07	AGM Battery 12V 110Ah				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the batteries and cables	3M	None	Shipyard recommendation	0,25
2	Check the battery cable terminal fastening and retighten if necessary	6M	Tools		0,25

630-00	Navigation System				
630-45	Gel Battery 12V 90Ah				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the batteries and cables	3M	None	Shipyard recommendation	0,25
2	Check the battery cable terminal fastening and retighten if necessary	6M	Tools		0,25

6-6. MECHANICAL

310-00	Main Deck Arrangement				
310-03	**Electric Winch 500 kg**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check wire rope visually.	D	None	Huchet Electric Winches Technical Manual	0,1
2	Clean and grease wire rope. Check fastening points of hook.	1M	Lubricant Fluid acc. Lubricant Table.	Huchet Electric Winches Technical Manual	0,5
3	Renew grease bath of gear box.	100H / 3Y	EP Grease	Huchet Electric Winches Technical Manual	2

312-00	Steering Gear				
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Visually inspect all system flexible hoses. Check specifically for any sign of cracking, brittleness, leaking, fretting, cuts, tears or abraded areas, deformations of the outer skin.	6M	None	Shipyard recommendation	0,5
2	Replace all flexible hoses.	5Y	None	Shipyard recommendation	2
312-01	**Steering Unit (articulations of cylinders)**				**Nb : 1**

335-00	Marine Fuel Oil System				
1	Visually inspect all system flexible hoses. Check specifically for any sign of cracking, brittleness, leaking, fretting, cuts, tears or abraded areas, deformations of the outer skin.	6M	None	Shipyard recommendation	0,25
2	Replace all flexible hoses.	5Y	None	Shipyard recommendation	1

335-01	Centrifugal Water Separator Unit 760l/h				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Cleaning of bowl	72H Max.	Special tools	Alfa Laval separator manual 9001834-02 Rev.2	1
2	Replace the O-rings with new ones included in the O-ring service kit. Check the condition of discs in the bowl, replace if necessary.	1Y	Special tools	Alfa Laval separator manual 9001834-02 Rev.2	1
3	Check/replace the disc stack to maintain the separation efficiency. Fit new vibration dampers. Inspect the stop flanges of the dampers for possible damage and replace the stop flanges with new ones if necessary.	2Y	Special tools	Alfa Laval separator manual 9001834-02 Rev.2	2
335-05	**Fuel Oil/Water Static Duplex Separator**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect or drain collection bowl of water and contaminants.	1D	Spare	Parker Racor Instructions Ref. 19536	0,25
2	Replace the fuel filter element.	500H (ME) or 6M	Spare	Parker Racor Instructions Ref. 19536	0,25
335-06	**Basket Filter DN50**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the strainer	6M	Common tools	Shipyard recommendation	0,25
335-07	**Basket Filter DN20**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the strainer	6M	Common tools	Shipyard recommendation	0,25
335-08	**Basket Filter DN65**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the strainer	6M	Common tools	Shipyard recommendation	0,25
335-09	**Hydraulic Pump Unit Station, Double for Quick Closing Valves**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Test the closing actuation of engine room fuel oil supply valves. After test, reset opening the valves into the machinery room.	2M	None	Shipyard recommendation	0,5
2	Drain and change the hydraulic oil using ISO VG-15 Hydraulic Oil.	As Request	Use hydraulic oil acc. lubricant schedule		1

336-00	Lub Oil System				
336-02	**Basket Filter DN40**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean the strainer	6M	Common tools	Shipyard recommendation	0,25

338-00	Air Vents, Sounding & Overflow				
338-01	Aseptic Filter				Nb : 3
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Replace the air filter element.	5Y	Common tools	Shipyard recommendation	0,5

341-10	CO2 Extinguishing system				
341-11	Cylinder 50 litre with 33kg CO2 Charge				Nb : 2
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Ensure that the CO2 pressure gauge indicates 0 bar in closed CO2 manifold Check that system components are undamaged.	1M	None	Shipyard recommendation	0,25
2	Ensure that the Load of CO2 is correct.	3M	Use a paint burner to heat the self-adhesive strip during one minute or use an ultrasonic level indicator.	Shipyard recommendation	0,25

368-00	Refrigeration Plant for Fish Hold				
368-01	Fish Hold Chiller - Compressor				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Visual check of refrigeration plant for oil leaks. Check the Oil Levels.	1W	None	FAI Technical Manual for Fish Hold Refrigerating Plant	0,25
2	Check the moisture with viewfinder indicator on liquid line. Check for refrigerant leaks using an automatic halogen leak detector.	1M	Automatic halogen leak detector	FAI Technical Manual for Fish Hold Refrigerating Plant	0,25
3	Check the trip and reclosing points of the safety devices.	3M	None	FAI Technical Manual for Fish Hold Refrigerating Plant	1
4	Check the good condition of crankcase heaters. Check the absence of deterioration due to the vibrations.	1Y	None	FAI Technical Manual for Fish Hold Refrigerating Plant	1
368-02	Fish Hold Chiller - Condenser				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check for refrigerant leaks using an automatic halogen leak detector.	1W	Automatic halogen leak detector	FAI Technical Manual for Fish Hold Refrigerating Plant	0,25
2	Inspect and clean condenser.	6M	Boiler tube brush	FAI Technical Manual for Fish Hold Refrigerating Plant	2
368-05	Ice Generator - Compressor				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Visual check of refrigeration plant for oil leaks. Check the Oil Levels.	1W	None	FAI Technical Manual for Fish Hold Refrigerating Plant	0,25

2	Check the moisture with viewfinder indicator on liquid line. Check for refrigerant leaks using an automatic halogen leak detector.	1M	Automatic halogen leak detector	FAI Technical Manual for Fish Hold Refrigerating Plant	0,25
3	Check the trip and reclosing points of the safety devices.	3M	None	FAI Technical Manual for Fish Hold Refrigerating Plant	1
4	Check the good condition of crankcase heaters. Check the absence of deterioration due to the vibrations.	1Y	None	FAI Technical Manual for Fish Hold Refrigerating Plant	1
5	Renew compressor oil. Clean also filter and magnetic plug. Check the cut out points of safety pressure switches HP/LP	Initial 100H 3Y / 12000H	Only by skilled refrigeration personnel. Attention; Ester oils are strongly hygroscopic.	FAI Technical Manual for Fish Hold Refrigerating Plant	2
368-06	**Ice Generator - Condenser**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check for refrigerant leaks using an automatic halogen leak detector.	1W	Automatic halogen leak detector	FAI Technical Manual for Fish Hold Refrigerating Plant	0,25
2	Clean condensate drain.	1Y	None	FAI Technical Manual for Fish Hold Refrigerating Plant	0,5
368-09	**Fish Hold & Ice Generator - Electrical Control Cabinet**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean for dust. Check connectors tightening	1Y	Vacuum Cleaner	FAI Technical Manual for Fish Hold Refrigerating Plant	0,25
368-13	**Ice Generator**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean filter & water spray. Manipule the ball valve.	W	None	Geneglace F100M Maintenance Manual	0,25
2	Clean salt dozer	M	None	Geneglace F100M Maintenance Manual	0,5
3	Check condition of torque limiter and wipers. Lubricate central shaft bearing with Multipurpose Extreme Pressure Water Resistant Grease (NLGI 2).	3M	Grease gun	Geneglace F100M Maintenance Manual	0,5
4	Check the tension of the belt. Check and retight all electric connections as required.	6M	Common tools	Geneglace F100M Maintenance Manual	0,5
5	Clean sea water condenser	1Y	Common tools	Geneglace F100M Maintenance Manual	1
6	Replace ball valve, central shaft bearing, wipers, carbon brushes of water pump motor, reamer and its bearings.	3Y	Common tools	Geneglace F100M Maintenance Manual	1

412-00	Generator Set				
412-02	Diesel Engine Caterpillar C4.4 (Naturally Aspirated Marine Genset)				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Belt - Inspect / Adjust / Replace Coolant Level - Check Electrical Connections - Check Engine Air Cleaner Service Indicator - Inspect Engine Oil Level - Check Walk-Around Inspection	Day	None	Caterpillar Operation and Maintenance Manual C4.4 (Mech) Marine Genset MCS-3	0,5

11	Aftercooler core - Inspect. Heat exchanger - Clean / Test. Overhaul considerations.	Refer to Caterpillar Operation and Maintenance Manual C32 Marine Engine - Page 102 Maintenance Recommendations			
541B02	**Reduction Gear Box Masson MM-W-3900-NR-CEW**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check oil level.	100H	At Engine idle Speed	Masson W3900 Operating Instructions	0,25
2	Change oil and filter element.	Initial 100H	Common Tools	Masson W3900 Operating Instructions	1
3	Clean Oil Filter. Clean Oil Cooler.	500H	Boiler tube brush	Masson W3900 Operating Instructions	2
4	Change oil and filter element.	2500H 1Y	Common Tools	Masson W3900 Operating Instructions	2
5	Replace the PTO-Clutch elastic spider (Fishing Gear HP Pump)	6000H	Common Tools	Masson W3900 Operating Instructions	4
6	Visual gear inspection.	8000H	Common Tools	Masson W3900 Operating Instructions	4
7	Replace hydraulic accumulator Replace oil cooler tube nest Replace clutch control solenoïd	15000H	Common Tools	Masson W3900 Operating Instructions	8
8	Replace oil pump, suction and pressure hoses. Replace clutch discs and seals. Replace input shaft bearings, clutch and drive pinion bearings.	25000H	Only qualified personnel should perform this maintenance	Masson W3900 Operating Instructions	tbd
9	Replace oil pump, suction and pressure hoses. Replace clutch discs and seals. Replace input shaft bearings, clutch and drive pinion bearings. Replace output shaft bearings.	40000H	Only qualified personnel should perform this maintenance	Masson W3900 Operating Instructions	tbd

572B00	Shafting Line and Controlled Pitch Propeller (CPP)				
572B02	**Bulkhead Seal**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspection of the seal	5Y / after activation	None	Profilseal Installation and Operation Instructions	2
572B04	**Earthing Assy**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check the cleanliness of the slipring face and the correct compression of the hold-down springs of the brushes. Check the wear of the brushes.	1W	None	Shipyard recommendations	0,25
572A06	**Propeller**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect all sacrificial anodes for wastage; if more than 50% wastage has occurred renew the anodes.	6M	None	Shipyard recommendations	2
572A07	**Stern Tube assy**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Take and record wear of stern tube bearings as required by classification society.	5Y	None	Masson MMS480 CPP Operating Instructions	tbd
572A09	**Fwd Stern Tube Seals**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Inspect visually the Fwd seal for signs of leakage.	1D	None	Masson MMS480 CPP Operating Instructions	0,25
572A10	**Hydraulic Block of Pitch Control**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
4	Change oil filter element (fitted on the reduction gearbox). The oil of CPP being derived from the reduction gearbox, it is recommended to carry out maintenance of the gearbox and the CPP at the same time.	1Y	Common Tools	Masson MMS480 CPP Operating Instructions	2
572A12	**Stern tube lub oil tank & Fwd shaft seal lub oil tanks**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check the stern tube lub oil tank level (Workshop). Check the Fwd shaft seal lub oil tank level (Storage Room). Check and record the bearing / stern tube oil temperature. Check the temperature of Fwd seal lub oil.	1D	None	Masson MMS480 CPP Operating Instructions	0,5
2	Test the lub oil of stern tube and Fwd shaft seal in accordance with classification society and replace it if necessary.	1Y	Common Tools	Shipyard recommendations	2
3	Inspect the stern tube and Fwd shaft seals, replace it as request.	5Y	None	Profilseal Installation and Operation Instructions	tbd

575-00	Sea Water Cooling System				
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Operate all seawater valves to assure they are operating and prevent the deposition of sediment.	1M	None	Shipyard recommendation	1
2	Check the zinc sacrificial anodes and replace it if they have greater than 50% wastage.	3M	None	Shipyard recommendation	1
3	Visually inspect all system flexible hoses. Check specifically for any sign of cracking, brittleness, leaking, fretting, cuts, tears or abraded areas, deformations of the outer skin.	6M	None	Shipyard recommendation	0,5
4	Replace all flexible hoses.	5Y	None	Shipyard recommendation	2
575-01	**Sea Water Strainer DN125**				**Nb : 2**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Clean / inspect the port & stbd strainers	1W	Common tools	Shipyard recommendation	0,5

900B00	Fishing Equipment				
900B01	**Oil Tank Equipped**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Replace oil filter element	Initial 50H	None	Bopp Trawler Equipment Instruction Manual	0,5
2	Replace oil filter element	Initial 250H	None	Bopp Trawler Equipment Instruction Manual	0,5
3	Replace oil filter element	Initial 500H	None	Bopp Trawler Equipment Instruction Manual	0,5
4	Replace oil filter element	500H	None	Bopp Trawler Equipment Instruction Manual	0,5
5	Clean Oil Cooler.	6M	Boiler tube brush	Bopp Trawler Equipment Instruction Manual	2
6	Take an oil sample to analysis.	1Y	None	Bopp Trawler Equipment Instruction Manual	0,5
7	Renew oil charge and clean hydraulic tank.	In case of exceeding cleanliness	Cleanliness class 7/8 (NAS 1638) or class 18/15/13 (ISO 4406)	Bopp Trawler Equipment Instruction Manual	4
900B03	**Hydraulic System**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check of all connections, clamps and hydraulic components subject to vibrations. Check of flexible pipes for oxydation or cracks).	6M	None	Bopp Trawler Equipment Instruction Manual	2
2	Check the good condition of sensors, pressure controllers and hydraulic valves.	6M	None	Bopp Trawler Equipment Instruction Manual	2
900B05	**Deck Control Panel**				**Nb : 1**
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Check the performance and characteristics of winches and drums (Speed, progressiveness, etc…).	1Y	None	Bopp Trawler Equipment Instruction Manual	2

900B06	Warp Winches				Nb : 1
Job No	Job Synopsis	Frequency	Requirements	Maker manual reference	Man hours
1	Lubricate grease nipples with Multipurpose Extreme Pressure Water Resistant Grease.	50H/1W	Grease Gun + Grease	Bopp Trawler Equipment Instruction Manual	0,25
2	Renew lub oil of shaft housing and drive mechanism of the control screw	1Y	Oil in accordance w. Lubrication Schedule	Bopp Trawler Equipment Instruction Manual	2
900B07	**Dual and single Net Drums on Gantry**				**Nb : 1**

Notes:

Mark with (1) indicates only the volume of tank. The volume of oil used for fill the piping system is not included.
Mark with (2) indicates only the volume of gearbox sump. The add volume of oil used for controllable pitch propeller is not included.
Mark with (2) indicates approximatively the salt tablets capacity of the vertical doser.

6-9. COMMERCIAL LUBRICANTS DATA SHEETS

6-9-1. Shell Rimula R4 L 15W-40 Diesel Engine Oil

Technical Data Sheet

Shell **Rimula** *R4 L 15W-40 (CJ-4)*

- *Low Emissions*
- *Extra Life - Improved Protection*

Multigrade Heavy Duty Diesel Engine Oils

Shell Rimula R4 L Energised Protection oils use the latest "Low-SAPS" additive technology to protect under the most severe conditions found in modern low emission engines. The protective power of the oil is enhanced through the use of high purity "Group II" base oils that provide increased additive activity. It delivers significant improvements in wear protection, deposit control and resistance to breakdown under high temperatures*.
The exclusive low-ash formulation helps protect the exhaust catalysts and particulate traps found on the latest low emission vehicles. Recommended by a wide range of OEMs, suitable for both the latest low-emissions (Euro 4,5, US 2007) and older model equipment.
*** compared to previous generation oils such as API CI-4 and ACEA E7**

ENERGISED PROTECTION
Adapting to your engine's changing needs

Performance, Features & Benefits

- **Simplify inventory needs**
  Shell Rimula R4 L is approved by a wide range of leading OEMs, simplifying inventory needs for fleets with a mixture of engine makes.
- **Emissions system capability**
  Advanced low-ash formulation helps control blocking of or poisoning of exhaust after-treatment devices, helping maintain vehicle emission compliance and engine fuel efficiency.
- **Lower operating costs**
  Shell Rimula R4 L is formulated with an enhanced acid-control system to help fleet operators to achieve maximum drain flexibility.
- **Outstanding wear protection**
  Demonstrated over millions of km of customer service, Shell Rimula R4 L provides significantly higher levels of wear protection than previous generation oils to prolong engine efficiency and life.

Main Applications

- **Severe duty heavy duty diesel engines**
  Shell Rimula R4 L is our highest performance 15W-40 HD oil providing outstanding protection for virtually all engines including the latest Euro 5 and US 2007 as well as older units.
- **Off-highway applications**
  Suitable for use in agricultural and construction applications, even with high levels of fuel sulphur.

Specifications, Approvals & Recommendations

- Caterpillar: ECF-2, ECF-3
- Cummins: CES 20081, 77, 72, 71
- DDC: 93K218
- Deutz: DQC III-10 LA
- MACK: EO-O Premuim Plus
- MAN: 3575
- MB Approval: 228.31
- MTU: Category 2.1
- Renault Trucks: RLD-3
- Scania: Low Ash
- JASO: DH-2
- IVECO: T2 E7 (Meets specification)
- Volvo: VDS-4, VDS-3
- API: CJ-4, CI-4+, CI-4, CH-4, CG-4, CF-4, CF.
- ACEA: E9, E7

For a full listing of equipment approvals and recommendations, please consult your local Shell Technical Helpdesk, or the OEM Approvals website.

Page 1 of 2 - Shell Rimula R4 L 15W-40 (CJ-4), v.2

Typical Physical Characteristics

Properties			Method	Shell Rimula R4 L 15W-40 (CJ-4)
Viscosity Grade				15W-40
Kinematic Viscosity	@40°C	mm²/s	ASTM D445	118
Kinematic Viscosity	@100°C	mm²/s	ASTM D445	15.5
Viscosity Index			ASTM D2270	139
Density	@15°C	kg/l	ASTM D4052	0.883
Sulphated Ash		%	ASTM D874	1.0 max
Total Base Number		mg KOH/g	ASTM D2896	10.6
Flash Point (COC)		°C	ASTM D92	227
Pour Point		°C	ASTM D97	-33

These characteristics are typical of current production. Whilst future production will conform to Shell's specification, variations in these characteristics may occur.

Health, Safety & Environment

- **Health and Safety**

  Shell Rimula R4 L 15W-40 (CJ-4) is unlikely to present any significant health or safety hazard when properly used in the recommended application and good standards of personal hygiene are maintained.

  Avoid contact with skin. Use impervious gloves with used oil. After skin contact, wash immediately with soap and water.

  Guidance on Health and Safety is available on the appropriate Material Safety Data Sheet, which can be obtained from http://www.epc.shell.com/

- **Protect the Environment**

  Take used oil to an authorised collection point. Do not discharge into drains, soil or water.

Additional Information

- **Advice**

  Advice on applications not covered here may be obtained from your Shell representative.

6-9-2. Shell Rimula R3+ 30 Diesel Engine Oil

Technical Data Sheet

Shell Rimula *R3+ 30 (CF/228.0)*

• *Extra Performance Monograde*

Monograde Heavy Duty Diesel Engine Oils

Shell Rimula R3 Energised Protection oils feature proven lubricant chemistry that adapts to your driving needs to provide extra protection whatever the demands of your engine or equipment. Featuring an active-detergent system to keep pistons and other engine parts clean, it provides protection against wear for long engine life and protection against deposits for efficient engine performance.

ENERGISED PROTECTION
Adapting to your engine's changing needs

Performance, Features & Benefits

- **Equipment manufacturer acceptance**
  Shell Rimula R3 monogrades are approved for use in a variety of engine applications by leading OEMs.
- **High standard of piston cleanliness**
  The high thermal stability and oil oxidation resistance provide a high standard of piston cleanliness.
- **Low engine wear and long component life**
  Overall engine cleanliness contributes to low engine wear, long component life, maintenance of power output, more operational stability and lower servicing costs.

Main Applications

- **Dedicated diesel engine oil performance**
  Shell Rimula R3 monogrades have been formulated to provide robust engine performance in a variety of off-highway applications or older on-highway diesel vehicles.
- **Construction industry application**
  Engine oil technology is sometimes specified for use in the transmission and hydraulic applications. Shell Rimula R3 monogrades offer premium performance and protection for these applications.
- **Stationary equipment**
  Shell Rimula R3 monogrades are suitable for certain stationary equipment, such as pumps, that run continuously under steady state conditions.
- **Detroit Diesel two-stroke engines**
  Shell Rimula R3 oils should not be used in Detroit Diesel two-stroke engines. An SAE 40 oil meeting the API CF-II Specification and having a sulphated ash content of less than 1% should be used.

Specifications, Approvals & Recommendations

- MAN : 270
- MB Approval: 228.0
- MTU: Category 1
- API : CF

For a full listing of equipment approvals and recommendations, please consult your local Shell Technical Helpdesk, or the OEM Approvals website.

Typical Physical Characteristics

Properties			Method	Shell Rimula R3+ (CF/228.0)
Viscosity Grade				30
Kinematic Viscosity	@40°C	mm^2/s	ASTM D 445	93
Kinematic Viscosity	@100°C	mm^2/s	ASTM D 445	11
Dynamic Viscosity	@-25°C	mPa s	ASTM D 5293	-
Viscosity Index			ASTM D 2270	103
Density	@15°C	kg/l	ASTM D 4052	0.89
Flash Point (COC)		°C	ASTM D92	242
Pour Point		°C	ASTM D97	-18

These characteristics are typical of current production. Whilst future production will conform to Shell's specification, variations in these characteristics may occur.

Health, Safety & Environment

- **Health and Safety**

  Shell Rimula R3+ is unlikely to present any significant health or safety hazard when properly used in the recommended application and good standards of personal hygiene are maintained.

  Avoid contact with skin. Use impervious gloves with used oil. After skin contact, wash immediately with soap and water.

  Guidance on Health and Safety is available on the appropriate Material Safety Data Sheet, which can be obtained from http://www.epc.shell.com/

- **Protect the Environment**

  Take used oil to an authorised collection point. Do not discharge into drains, soil or water.

6-9-3. Shell Tellus S2 V Hydraulic Oil

Every part of your machine or process has been meticulously engineered, so you want to use a lubricant that has been designed to ensure that your equipment is well protected and works efficiently.

The Shell Tellus range of hydraulic fluids has been developed to enable equipment operators to select the oil that will deliver optimum value to their operations through

- **wear protection**
- **long oil life**
- **system efficiency.**

Performance at a glance

	Protection	Oil life	System efficiency
Shell Tellus S3 V Long life and improved efficiency Versatile applications	✓✓✓✓	✓✓✓✓	✓✓✓✓
Shell Tellus S2 V Extra protection Versatile applications	✓✓✓✓	✓✓✓	✓✓✓✓
Shell Tellus S2 M Extra protection Industrial applications	✓✓✓	✓✓✓	✓✓✓

Performance level is a relative indication only.

AN EXTENDED-TEMPERATURE-RANGE HYDRAULIC FLUID

Shell Tellus S2 V uses a unique additive technology to deliver an oil life over twice the industry standards, excellent pump protection and high efficiency levels. It is a fluid that you can rely on in outdoor or cold environments, as it has been designed to have a wide operating temperature range.

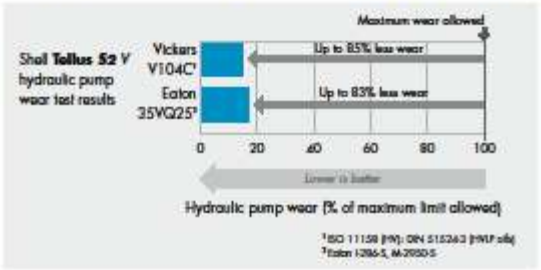
Engineered to maintain its viscosity and performance over the oil-drain interval under severe mechanical stress and under hot and humid conditions, it is the most popular multigrade hydraulic oil in the Shell Tellus range. It is widely recognised and approved by leading equipment manufacturers.

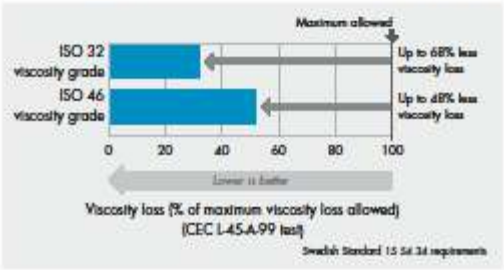
IMPROVED CLEANLINESS: All Shell Tellus products now meet the demanding cleanliness requirements of the DIN industry standard to help provide extra protection, improved filter performance and less maintenance.

DESIGNED TO PROTECT

Protecting components from damage can help to increase service life and maximise your return on investment. Shell Tellus S2 V can help to achieve this by providing

- ***up to 85% less wear***
  than the maximum allowed in the industry-standard hydraulic pump tests
- ***up to 68% better protection against viscosity loss***
  for continuing protection and performance throughout the oil's life.

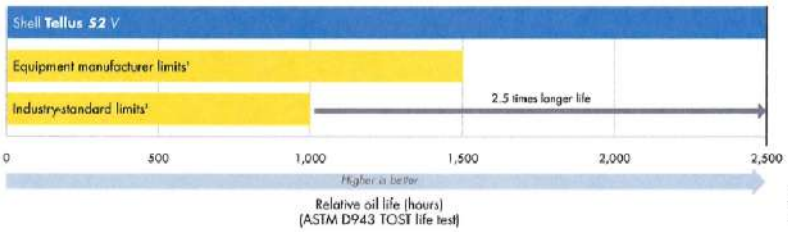




DESIGNED FOR LONG OIL LIFE

Limiting fluid degradation can help to prolong oil life. Shell Tellus S2 V is designed to help you operate for longer without interruption – for reduced maintenance requirements and enhanced productivity. In the industry-standard oil life test, Shell Tellus S2 V achieved

- ***two and a half times longer oil life***
  than the industry minimum.

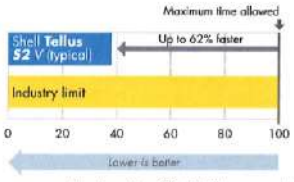


¹GM LH-04-2-00
²ASTM D6158; ISO 11158 HV; DIN 51524-3 (HVLP)

DESIGNED FOR HIGH EFFICIENCY

A hydraulic fluid needs to protect, lubricate and transmit power efficiently. Shell Tellus S2 V is designed to help maximise productivity by helping equipment to meet or exceed its design capabilities. Compared with the industry minimum requirements, it offers

- ***up to 62% faster air release***
  for efficient and precise hydraulic power transmission



ISO 11158 (HV oils) – ISO 46

- ***up to 32% better filterability***
  in the demanding industry-standard wet test procedure to help reduce pressure loss for more efficient operation.

DIN 51524-3 (HVLP oils)

SPECIFICATIONS AND APPROVALS

Shell Tellus S2 V meets the requirements of a wide range of industry bodies and equipment manufacturers. ISO viscosity grades available: 15, 22, 32, 46, 68, 100.

Claims and approvals	Meets requirements
Cincinnati P-68 (ISO 32)	Swedish Standard SS 15 54 34 AM (ISO VG 32)
Cincinnati P-70 (ISO 46)	ISO 11158 HV Type
Cincinnati P-69 (ISO 68)	AFNOR NFE 48-603
Denison HF-0, HF-1, HF-2	ASTM D6158-05 (HV fluids)
Eaton (Vickers) M-2950 S, I-286 S	DIN 51524-3 HVLP type

APPLICATIONS

Mobile and outdoor hydraulic applications – for exposed environments that are subject to wide temperature variations

Precision hydraulic systems – for good control of fluid viscosity over the operating cycle and excellent fluid filterability

REAL-WORLD VALUE DELIVERY

Shell Tellus S2 V has documented value delivery in both stationary and mobile hydraulic applications across a wide range of industries. For instance:

- operators of mobile and exposed plant have increased operational efficiency
- open-cast mining and cement plants have reduced maintenance requirements and sludge-formation-related stoppages by switching from competitor oils
- stationary equipment such as presses have benefited from the fluid's greater temperature-related viscosity stability: one customer has reportedly unlocked maintenance cost savings of over $20,000 a year[1].

FULL PRODUCT AND SERVICE PORTFOLIO

Whatever your needs or application, Shell can provide a full range of oils and greases, including synthetic, high-performance products and additional services.

[1]Saving reported by one customer. Actual savings may vary, depending on the application, the current oil used, the maintenance procedures and the condition of the equipment.

Technische Information
Technical Information
Information Technique

KT-510-4

Polyolester-Öle BSE32 und BSE55 für Hubkolbenverdichter

Inhalt

1 Allgemeines

BITZER-Hubkolbenverdichter werden für den Einsatz chlorfreier HFKW-Kältemittel (R134a, R404A, R407A/B, R407C, R507A etc.) mit einem hochwertigen Polyolester-Öl befüllt. Bei Fabrikbefüllung erhält die Typenbezeichnung des Verdichters den Zusatz "Y" – z. B. 4CC-6.2Y.

Esteröle bieten – im Gegensatz zu konventionellen Schmiermitteln – eine gute Löslichkeit mit HFKW-Kältemitteln und sind deshalb für den Betrieb mit diesen Stoffen zwingend erforderlich. Sie haben darüber hinaus hervorragende Schmiereigenschaften und ein günstiges Viskositätsverhalten (hoher Viskositäts-Index).

Weitere Informationen über die Besonderheiten im Umgang mit Esterölen sowie Löslichkeitsgrenzen siehe Technische Informationen KT-620 und KT-630.

Polyolester Oils BSE32 and BSE55 for Reciprocating Compressors

Contents

1 General

BITZER reciprocating compressors which are intended for use with chlorine free HFC refrigerants (R134a, R404A, R407A/B, R407C, R507A etc.) are charged with a high quality polyolester oil. When factory charged the compressor designation has the supplement "Y" – e. g. 4CC-6.2Y.

Contrary to conventional lubricants, ester oils provide good miscibility with HFC refrigerants and are therefore essential for the operation with these substances. Moreover they have outstanding lubrication characteristics and a favourable viscosity performance (high viscosity index).

Further information concerning the special handling of ester oils and miscibility limits are given in the Technical Informations KT-620 and KT-630.

Huiles polyolester BSE32 et BSE55 pour compresseurs à piston

Sommaire

1 Généralités

Les compresseurs à pistons BITZER prévus pour travailler avec un fluide frigorigène non chloré HFC (R134a, R404A, R407A/B, R407C, R507A, etc.) sont livrés avec une charge d'huile polyolester de haute qualité. Pour les compresseurs "chargés" en usine, la désignation du type est complétée par la lettre "Y" – par exemple 4CC-6.2Y.

Contrairement aux lubrifiants conventionnels, les huiles ester sont miscibles avec les fluides frigorigènes HFC si bien que leur emploi avec ces substances s'impose forcément. De plus, ces huiles présentent de très bonnes caractéristiques lubrifiantes et un comportement avantageux de la viscosité (indice de viscosité élevé).

Pour d'autres informations relatives aux particularités et à l'utilisation des huiles ester ainsi qu'aux limites de miscibilité, se référer aux Informations techniques KT-620 et KT-630.

4 Alternativen zu BITZER Esterölen

4.1 BSE32

Lieferant	Ölsorte
Deutsche BP	Castrol Icematic SW 32
CPI	Solest 31-HE
ExxonMobil	EAL Arctic 22 CC EAL Arctic 32
Fuchs	SEZ 32
Shell	Clavus R32
Uniquema	RL 32 H

4.2 BSE55

Lieferant	Ölsorte
Deutsche BP	Castrol Icematic SW 68
CPI	Solest 68
ExxonMobil	EAL Arctic 68
Fuchs	SE 55
Shell	Clavus R68
Uniquema	RL 68 S

Die genannten Alternativ-Öle entsprechen in ihren Eigenschaften weitgehend der Originalfüllung BSE32 und BSE55. Eine Mischung mit dem Originalöl ist möglich – innerhalb der jeweiligen Viskositätsgruppe –, sofern entsprechende eigene oder vergleichende Erfahrungen für den betreffenden Anwendungsfall vorliegen. Grundlegende Voraussetzungen für den Einsatz von Alternativ-Ölen sind vom Hersteller bzw. Lieferanten garantierte Produktqualität und Feuchtigkeitswerte (< 50 ppm).

Achtung!
Wegen der spezifischen Formulierung des BSE55 mit Blick auf die tribologischen Eigenschaften, darf für die Erstbefüllung der Verdicher nur Originalöl verwendet werden. Oben gelistete Alternativen sind nur für den Servicefall zugelassen.

4 Alternatives to BITZER ester oils

4.1 BSE32

Supplier	Oil type
Deutsche BP	Castrol Icematic SW 32
CPI	Solest 31-HE
ExxonMobil	EAL Arctic 22 CC EAL Arctic 32
Fuchs	SEZ 32
Shell	Clavus R32
Uniquema	RL 32 H

4.2 BSE55

Supplier	Oil type
Deutsche BP	Castrol Icematic SW 68
CPI	Solest 68
ExxonMobil	EAL Arctic 68
Fuchs	SE 55
Shell	Clavus R68
Uniquema	RL 68 S

The characteristics of the alternative oils listed mainly correspond to the original BSE32 and BSE55 charge. It is also possible to mix these with the original oil, within the respective viscosity group, as long as appropriate own or comparable experience is available for the application concerned. The basic assumption for the use of these alternatives is that the manufacturer or supplier guarantees the product quality and the moisture content (< 50 ppm).

Attention!
Due to the specific formulation of BSE55 with respect to the tribological characteristics, only original oil shall be used for the first charge of the compressor. The alternatives listed above are allowed only in case of service.

4 Alternatives aux huiles ester de BITZER

4.1 BSE32

Fournisseur	Type d'huile
Deutsche BP	Castrol Icematic SW 32
CPI	Solest 31-HE
ExxonMobil	EAL Arctic 22 CC EAL Arctic 32
Fuchs	SEZ 32
Shell	Clavus R32
Uniquema	RL 32 H

4.2 BSE55

Fournisseur	Type d'huile
Deutsche BP	Castrol Icematic SW 68
CPI	Solest 68
ExxonMobil	EAL Arctic 68
Fuchs	SE 55
Shell	Clavus R68
Uniquema	RL 68 S

Les alternatives précitées présentent approximativement les mêmes propriétés que les charges d'huile d'origine, à savoir BSE32 et BSE55. A l'intérieur d'un même "groupe" de viscosité un mélange avec l'huile d'origine est possible, dans la mesure où l'on dispose de l'expérience suffisante (ou d'expériences comparables) pour le champ d'application concerné. Les conditions préliminaires à l'emploi d'huiles alternatives sont une qualité de produit et une teneur en eau (< 50 ppm) garanties par le producteur resp. le fournisseur.

Attention !
En raison de la formulation spécifique du BSE55 relative aux propriétés tribologiques, utiliser uniquement de l'huile d'origine pour le premier remplissage des compresseurs. D'autres alternatives listées ci-dessus ne sont autorisées que pour l'entretien.

5 Einsatz von Esterölen mit chlorierten (H)FCKW-Kältemitteln (R22 etc.)

Inzwischen besteht auch bei Anlagen mit (H)FCKW-Kältemitteln ein Trend zur Befüllung der Verdichter mit Esteröl, um eine spätere Umstellung auf chlorfreie Kältemittel zu vereinfachen. Esteröle sind grundsätzlich auch für derartige Anwendungen geeignet, jedoch besteht ein deutlich erhöhtes Risiko hinsichtlich Verdichterverschleiß und chemischer Stabilität des Kältekreislaufs. Dies gilt selbst im Hinblick darauf, dass in BITZER-Verdichtern nur besonders hochwertige Materialien zum Einsatz kommen – u. a. nitrierte Wellen, sonderbehandelte Lager, hartverchromte Verdichtungsringe, Edelstahl-Arbeitsventile.

Auch das Argument einer vereinfachten Umstellung auf chlorfreie Alternativstoffe gilt nur unter Einschränkung. Eine qualifizierte Umstellung erfordert auf Grund der unvermeidlichen Kontaminierung des Öls mit Chlor aus dem (H)FCKW-Kältemittel ohnehin einen mehrfachen Ölwechsel.

Der Einsatz von Esteröl in Verbindung mit (H)FCKW-Kältemitteln sollte immer sorgfältig abgewogen werden, wobei folgende Punkte berücksichtigt werden müssen:

- Beim Betrieb mit (H)FCKW ist die im Esteröl gelöste Kältemittelmenge mehr als doppelt so hoch als bei herkömmlichen Schmierstoffen oder bei Verwendung von Esteröl in Verbindung mit chlorfreien HFKW. Daraus resultiert vor allem bei hohen Saugdrücken und niedriger Öltemperatur eine starke Viskositätsminderung mit der Gefahr eines erhöhten Verschleißes. Besonders kritisch ist dabei der Startvorgang nach längeren Stillstandszeiten.
- Esteröle sind stark hygroskopisch. Sie erfordern deshalb bei (H)FCKW auf Grund des Chloranteils einen besonders hohen Trocknungsgrad (< 50 ppm), der in der Praxis nur mit erheblichem Aufwand erreicht werden kann. Überhöhte Feuchtigkeitswerte führen zu Hydrolyse und damit zu Säurebildung und Kupferplattierung sowie in der Folge zu Verdichterschaden.

5 Use of ester oils with chlorinated (H)CFC refrigerants (R22 etc.)

A trend also exists towards charging compressors with ester oil for plants with (H)CFC refrigerants, to simplify a subsequent conversion to chlorine free refrigerant. Ester oils are generally suitable for such applications, however, a significantly increased risk exists regarding compressor wear and the chemical stability of the system. This applies even though BITZER compressors are constructed with high quality materials such as surface hardened shafts, specially treated bearings, hard chrome plated compression rings and high alloy steel valve reeds.

The argument that the conversion to alternative refrigerants is simplified is only valid with certain restrictions. A qualified conversion requires repeated oil changes due to the unavoidable contamination of the oil with chlorine from the (H)CFC refrigerant.

The use of ester oil in combination with (H)CFC refrigerants should always be considered carefully especially regarding the following points:

- When operating with (H)CFC the quantity of refrigerant dissolved in the ester oil is more than double as with conventional lubricants or when operating with a combination of ester oil and chlorine free HFC. This results in a strong viscosity reduction and the danger of increased wear, especially in cases of high suction pressure and low oil temperature. The starting procedure after a long period of standstill is particularly critical.
- Ester oils are strongly hygroscopic and therefore require a very high degree of dehydration (< 50 ppm) when used with (H)CFC due to the chlorine content; this can only be achieved in practice with a considerable effort. Excessive moisture content leads to hydrolysis and thereby to acid formation with copper plating resulting in damage to the compressor.

5 Emploi d'huiles ester avec des fluides frigorigènes chlorés (H)CFC (R22 etc.)

Entre-temps, il existe une tendance au remplissage des compresseurs avec de l'huile ester même quand ceux-ci sont prévus pour travailler avec des fluides (H)CFC, ceci en vue de la simplification d'une conversion future avec un fluide exempt de chlore. En principe, les huiles ester sont adaptées à ce type d'emploi mais il subsiste un risque accru d'usure du compresseur et de stabilité chimique du circuit frigorifique. Ceci reste valable tout en sachant que seuls des matériaux de très hautes qualités sont employés dans les compresseurs BITZER – entre autre, vilebrequin nitruré, roulements spécialement traités, segments chromés dur, clapets de travail en acier inoxydable.

De même, l'argumentation d'une conversion simplifiée avec des produits de substitution exempts de chlore n'est valable que sous certaines restrictions. Une conversion de qualité nécessite, en raison de la contamination inévitable de l'huile avec du chlore (du fluide frigorigène (H)CFC), plusieurs vidanges d'huile.

L'emploi d'une huile ester avec des fluides frigorigènes (H)CFC devrait toujours être soigneusement réfléchi, en tenant compte des points suivants:

- En fonctionnement avec un fluide (H)CFC, la quantité de fluide frigorigène en solution dans l'huile ester est le double de celle avec un lubrifiant conventionnel, ou lors de l'emploi d'une huile ester avec un fluide HFC exempt de chlore. Il en résulte une forte diminution de la viscosité avec un risque d'usure plus important, principalement pour des pressions d'aspiration élevées et une faible température de l'huile. La phase de démarrage après de longues arrêts est particulièrement critique.
- Les huiles ester sont fortement hygroscopiques et nécessitent par conséquent pour les (H)CFC, en raison de la présence de chlore, un degré de dessiccation particulièrement poussé (< 50 ppm) qui, en pratique, n'est obtenu qu'avec une importante mise en oeuvre. Une teneur en eau trop élevée engendre une hydrolyse et par conséquent une formation d'acide et de dépôts de cuivre qui peuvent aboutir à des dégâts sur le compresseur.

- Esteröle haben ein besonders gutes Löslichkeitsverhalten gegenüber Schmutzablagerungen in der Anlage. Sie erhöhen damit die Gefahr einer Schädigung des Verdichters durch abgelösten Schmutz.

- Ester oils have an especially good solubility behaviour with regard to system dirt deposits and therefore increase the danger of damage to the compressor due to loosened dirt.

- Les huiles ester présentent la particularité de dissoudre fortement les dépôts d'impureté résiduels du système frigorifique ce qui augmente le risque de détérioration du compresseur par les impuretés qui ont été détachées.

Resultierende Anforderungen

- Betrieb bei Klimabedingungen (H-Bereich) und Einspritzkühlung (CIC) mit einstufigen Verdichtern:
  - Esteröl mit höherer Basisviskosität einsetzen (BSE55 an Stelle von BSE32).
- Bei der Montage:
  - grundsätzlich nur Rohrleitungen und Anlagen-Komponenten verwenden, die innen sauber und trocken sind (frei von Zunder, Metallspänen, Rost- und Phosphat-Schichten) und die luftdicht verschlossen angeliefert werden
  - reichlich dimensionierten Trockner einbauen
  - saugseitigen Reinigungsfilter einbauen
  - Öl sorgfältig handhaben: Öl vor Feuchtigkeit schützen. Nur originalverschraubte Öldosen verwenden!
- Bei der Inbetriebnahme:
  - hochgradig evakuieren
- Betrieb:
  - nur innerhalb abgesicherter Temperaturgrenzen
  - Ölsumpfheizung hoher Leistung verwenden
  - Trockner nach ca. 100 Betriebsstunden erneuern
- Mit der Anlagensteuerung sicherstellen:
  - ausreichende Sauggasüberhitzung
  - Kurzzeitbetrieb vermeiden
  - gegen Flüssigkeitsschläge absichern
  - ggf. Abpumpschaltung vorsehen

Resulting requirements

- Operation at air conditioning range (H range) and injection cooling (CIC) with single stage compressors:
  - Use ester oil with a higher basic viscosity (BSE55 instead of BSE32).
- While mounting:
  - Only use tubes and components which are clean and dry inside (free from slag, swarf, rust, and phosphate coatings) and which are delivered with an air tight seal
  - install generously sized drier
  - install suction side cleaning filter
  - handle the oil carefully: Keep oil dry. Use oil from originally sealed containers only!
- While commissioning:
  - evacuate to a high-grade vacuum
- Operation:
  - within controlled temperature limits only
  - use a high capacity crankcase heater
  - change the drier after approximately 100 operating hours
- Ensure with plant control:
  - sufficient suction gas superheat
  - avoid short operating periods
  - protect against liquid slugging
  - in certain cases provide a pump down system

Exigences résultantes

- Fonctionnement dans le domaine de climatisation (champ d'application H) et en cas de refroidissement par injection de liquide (CIC) avec un compresseur mono-étagé:
  - Employer une huile ester avec une viscosité de base plus élevée (BSE55 au lieu de BSE32).
- Pendant le montage:
  - ne utiliser que des tubes et des composants, qui sont propres et secs à l'intérieur (pas de calamine, de copeaux métalliques, de dépôts de rouille et de phosphates) et qui sont livrés hermétiquement clos
  - installer un déshydrateur largement dimensionné
  - installer un filtre de nettoyage à l'aspiration
  - Manipuler l'huile avec précaution: Protéger l'huile contre l'humidité. N'utiliser que des bidons d'huile fermés d'origine!
- Pendant la mise en service:
  - réaliser un vide poussé
- Fonctionnement:
  - seulement dans les limites de températures autorisées
  - utiliser une résistance de carter de puissance élevée
  - remplacer le déshydrateur après environ 100 heures de fonctionnement
- Assurer avec la commande d'installation:
  - surchauffe à l'aspiration suffisante
  - éviter les courts cycles
  - prévenir des coups de liquide
  - prévoir éventuellement une commande par pump down

Hinweise

- Wegen der besonderen Risiken mit Esterölen in (H)FCKW-Kältekreisläufen bleibt im Falle eines Verdichterschadens die Beurteilung eines Garantieanspruches der individuellen Überprüfung des Verdichters im Werk vorbehalten.
- Alle Verdichter der ".2-Generation" können bereits mit den chlorfreien Stoffen R134a, R404A, R407A, R407B, R407C und R507A eingesetzt werden. Dabei kommen die positiven Eigenschaften von Esteröl voll zum Tragen. Eine solche Lösung sollte deshalb gegenüber (H)FCKW-Systemen mit Esteröl bevorzugt werden.

Recommendations

- Due to the special risks with ester oils and (H)CFC refrigerant circuits, in the case of compressor damage we reserve the right to assess a guarantee claim according to an individual examination of the compressor in our factory.
- All compressors of the ".2-Generation" can already be used with R134a, R404A, R407A, R407B, R407C and R507A. Hereby the positive characteristics of ester oils are fully exploited. Such a solution should therefore be preferred over an (H)CFC system with ester oil.

Indications

- En raison des risques particuliers avec les huiles ester dans des circuits frigorifiques avec des fluides (H)CFC, le gain de la garantie, en cas de détérioration du compresseur, est assujetti au contrôle spécifique du compresseur en usine.
- Tous les compresseurs de la "génération .2" peuvent être utilisés avec les fluides frigorigènes exempts de chlore R134a, R404A, R407A, R407B, R407C et R507A. Dans ce cas, les propriétés positives des huiles ester sont pleinement exploitées. Par conséquent, une solution de ce genre devrait être préférée à celle de systèmes avec un fluide (H)CFC et une huile ester.

6-9-5. Shell Omala Oils

Previous Name: **Shell Omala Oils**

Shell **Omala *S2* G**

Industrial Gear Oils

- *EXTRA PROTECTION*
- *STANDARD APPLICATIONS*

Shell Omala S2 G oils are high quality extreme-pressure oils designed primarily for the lubrication of heavy duty industrial gears. Their high load carrying capacity and anti-friction characteristics combine to offer superior performance in gears.

Performance Benefits

- *Long oil life – Maintenance saving*

  Shell Omala S2 G oils are formulated to resist thermal and chemical breakdown throughout the maintenance interval. They withstand high thermal loading and resist the formation of sludge to provide extended oil life capability, even with bulk oil temperatures of up to 100°C in certain applications.

- *Excellent wear & corrosion protection*

  Excellent load carrying capacity reduces gear tooth and bearing wear on both steel and bronze components.

  Shell Omala S2 G has excellent corrosion protection, protecting both steel and bronze components, even in the presence of contamination by water and solids.

- *Maintaining system efficiency*

  Shell Omala S2 G oils have excellent water separation properties, such that excess water can be drained easily from lubrication systems to help extend the life of the gears and ensure efficient lubrication of the contact areas.

  Water can greatly accelerate surface fatigue of gears and bearings as well as promoting ferrous corrosion on internal surfaces. Water contamination should therefore be avoided or removed as quickly as possible after the occurrence.

Applications

- *Enclosed industrial gear systems*

  Shell Omala S2 G oils are formulated using an effective sulphur-phosphorus additive system to provide an extreme pressure performance which allow trouble-free application in most enclosed industrial gearboxes using steel spur and helical gears.

- *Highly loaded gears*

  Shell Omala S2 G oils have an effective full extreme pressure (EP) additive system allowing them to be used in highly-loaded gear systems.

- *Other applications*

  Shell Omala S2 G oils are suitable for lubrication of bearings and other components in circulating and splash-lubricated systems

For highly-loaded worm drives the Shell Omala "W" series oils are recommended.
For automotive hypoid gears, the appropriate Shell Spirax Oil should be used.

Specifications and Approvals

Meets ISO 12925-1 Type CKD, except ISO 680-1000
Meets DIN 51517- Part 3 (CLP), except ISO 680-1000
Meets AGMA 9005- EO2 (EP)

These characteristics are typical of current production. Whilst future production will conform to Shell's specification, variations in these characteristics may occur.

6-9-6. Shell Lurop V

Shell Lurop V

Lubrifiant biodégradable pour câbles

Description

Shell Lurop V est un fluide de maintenance pour câbles biodégradable et exempt d'huile minérale. Il assure une excellente protection contre la corrosion et se comporte très favorablement envers les bandages en caoutchouc et plastique des rouleaux et des roues d'entraînement des câbles.
Shell Lurop V est un lubrifiant universel pour toutes les sortes de câbles. Le produit est pré-dilué avec un solvant pour faciliter son application et l'infiltration. Un film lubrifiant fin et huileux, non collant, très adhérent subsiste après l'évaporation du solvant.

Caractéristiques

- excellente propriété adhésion
- bonne biodégradabilité
- bonne protection anticorrosive

Domaine d'utilisation

- L'application se fait à l'aide d'un appareil de graissage
- La quantité de recouvrement devrait se situer entre 15 et 20 g/m^2, avant évaporation du solvant
- Un temps de séchage de quelques heures après l'application devrait être prévu pour favoriser l'adhérence du film d'huile et l'évaporation du solvant
- La lubrification des câbles devrait avoir lieu par temps sec pour obtenir une protection contre la corrosion optimale
- Un nettoyage en profondeur est une condition préliminaire indispensable pour assurer une lubrification et une protection efficace des câbles
- Shell Lurop V est pré-dilué à l'aide d'un solvant, une dilution complémentaire peut être effectuée le cas échéant au moyen du solvant Shell Solvent SM. Aucun autre solvant n'est autorisé.

Compatibilité avec joints et vernis

Compatible avec les vernis, élastomères et joints utilisés couramment pour l'huile minérale

Valeurs typiques

Shell Lurop V

Teneur en solvent	%		30
Point d'éclair	°C	EN 57	64
Biodégradabilité	%	OECD 301 B	>75
Code de danger (SPI)			F 3 I Fu PN3

Valeurs moyennes soumises aux tolérances usuelles. Modifications réservées.

6-9-7. Shell Alvania Greases EP

Shell Alvania Greases EP(LF)

General purpose extreme-pressure industrial grease

THICKENER	NLGI	TEMP RANGE	BASE OIL VISCOSITY		EP	WATER RESISTANCE
			40°C	100°C		
LITHIUM	00, 0, 1, 2 & 3	-20°C to +120°C	189 cSt	15.6 cSt	✓✓	★★

Shell Alvania Greases EP(LF) offer the excellent performance expected of the world's leading brand of grease.

They are premier quality, multipurpose, extreme-pressure industrial greases based on a blend of high viscosity index mineral oils and a lithium hydroxystreate soap thickener and contain lead free extreme-pressure and other proven additives.

Shell Alvania Greases EP(LF) are designed for the grease lubrication of rolling element and plain bearings such as those found in the steel, paper, mining, quarrying and construction industries.

Applications

Shell Alvania Greases EP(LF) 0 & 00 are specifically designed for:

- Steel mill lubrication where a softer grease is necessary for specialised dispensing systems.
- Heavy duty plain and rolling element bearings operating under severe conditions including shock loading in wet environments
- Gearbox applications where semi-fluid greases are required

Shell Alvania Grease EP(LF) 1 is designed for:

- Heavy duty bearings served by centralised dispensing equipment
- Extreme-pressure gear grease for applications at normal ambient temperature
- Heavy duty plain and rolling element bearings operating under severe conditions including shock loading in wet environments
- Low temperature greasing applications

Shell Alvania Grease EP(LF) 2 & 3

are designed for:

- Heavy duty bearings and general industrial lubrication
- Heavy duty plain and rolling element bearings operating under severe conditions including shock loading in wet environments
- Operation over the temperature range -20°C to 100°C for bearings operating at 75% of the maximum rated speed (Can withstand up to 120°C intermittently)

Performance Features

- ***Outstanding load carrying capacity***
  Shell Alvania Greases EP(LF) contain special extreme-pressure additives which enable them to withstand heavy and shock loads without failure of the lubricant film.
- ***Superior mechanical stability***
  Compared to 'leaded' Alvania, the resistance to extended mechanical working is significantly improved. This is particularly important in vibrating environments where poor mechanical stability can lead to grease softening with subsequent loss of lubrication performance and leakage.

October 2007 1/2 Version 2

- ***Excellent resistance to water wash-out***
  Shell Alvania Greases EP(LF) have been formulated to offer much improved levels of resistance to water wash-out compared to the old leaded product.
- ***Oxidation stability***
  Specially selected base oil components have excellent oxidation resistance. Their consistency will not alter in storage and they withstand high operating temperatures without hardening or forming bearing deposits
- ***Excellent corrosion protection***
  Shell Alvania Greases EP(LF) have a strong affinity with metal and have the ability to protect bearing surfaces against corrosion, even when the grease is contaminated with water.

Performance Specifications

Meet the British Timken specification for Steel Mill applications

Re-greasing Intervals

For bearings operating near their maximum recommended temperatures, re-greasing intervals should be reviewed

Health & Safety

Shell Alvania Greases EP(LF) are unlikely to present any significant health or safety hazard when properly used in the recommended application, and good standards of industrial and personal hygiene are maintained.

For further guidance on Product Health & Safety refer to the appropriate Shell Product Safety Data Sheet.

Typical Physical Characteristics

Shell Alvania Grease EP(LF)	00	0	1	2	3
Soap Type	Lithium	Lithium	Lithium	Lithium	Lithium
Base Oil	Mineral	Mineral	Mineral	Mineral	Mineral
Kinematic Viscosity @ 40°C cSt 100°C cSt (IP 71/ASTM-D445)	 189 15.6	 189 15.6	 189 15.6	 189 15.6	 189 15.6
Dropping Point °C (IP 132)	-	-	180	180	180
Cone Penetration Worked @ 25°C 0.1mm (IP 50/ASTM-D217)	400-480	355-385	310-340	265-295	220-250

These characteristics are typical of current production. Whilst future production will conform to Shell's specification, variations in these characteristics may occur.

6-9-8. Shell Tivela Oils W

Shell Tivela Oils W

Synthetic Industrial gear lubricants

Shell Tivela Oils W are high performance synthetic gear lubricants with special additives to enhance their anti-oxidation and anti-corrosion characteristics.

Applications

- High speed/shock loaded industrial gears
- Highly loaded industrial gears
- Worm gear lubrication
- Bearing & circulation lubricants in applications such as plastic calendars where high bulk oil temperatures of up to 200°C may be experienced

Shell Tivela Oils W are not recommended for the lubrication of gears manufactured from bronze alloys containing aluminium

Performance Features

- ***Extremely high viscosity index***
  A natural feature providing high shear stability without the need for viscosity index improvers. Stays in grade in the most arduous conditions.
- ***Low pour point***
  Effective lubrication at low start-up temperatures
- ***High load-carrying capacity***
  Maintains a fluid film between working surfaces in conditions of high load and shock
- ***Exceptional low frictional characteristics***
  For efficient power transmission
- ***High oxidation & thermal stability***
  Resistant to the formation of the harmful products of oxidation
- ***Excellent steel-on-steel scuffing protection and steel-on-bronze anti-wear characteristics***
  For reliable trouble free performance

Advice

Advice on applications not covered in this leaflet may be obtained from your Shell Representative

Typical Physical Characteristics

Shell Tivela Oil	WA	WB
ISO Viscosity Grade	150	220
Kinematic Viscosity @ 40°C cSt 100°C cSt (IP 71)	147 24.5	234 35
Viscosity Index (IP 226)	200	200
Density @ 15°C kg/l (IP 365)	1.025	1.026
Flash Point °C (Open Cup)	277	321
Pour Point °C (IP 15)	-33	-33

These characteristics are typical of current production. Whilst future production will conform to Shell's specification, variations in these characteristics may occur.

Health & Safety

Shell Tivela Oils W are unlikely to present any significant health or safety hazard when properly used in the recommended application, and good standards of industrial and personal hygiene are maintained.

Avoid contact with skin. Use impervious gloves with used oil. After skin contact, wash immediately with soap and water.

For further guidance on Product Health & Safety refer to the appropriate Shell Product Safety Data Sheet.

Protect the environment
Take used oil to an authorised collection point. Do not discharge into drains, soil or water.

Product data sheet

AXAL® PRO SALT TABLETS

Pure dried vacuum salt

Tablets produced in Borth, Dombasle and Harlingen are in compliance with the NF mark for water treatment devices: regenerating salts for water softeners.

Field of application
For industrial uses.
AXAL® PRO tablets are specially produced to obtain a very pure brine for regeneration of ion exchange resins in water softeners.

Production process
AXAL® PRO tablets are obtained by very high mechanical pressure, without anticaking agent.

Storage
Handling and storage should be ensured under proper hygiene and preservation conditions so as to exclude any risk of contamination. Do not stack up more than 3 pallets.

Safety
A safety data sheet on SODIUM CHLORIDE can be obtained from esco on request. Sodium chloride is exempt from the REACH registration requirement because it is a natural mineral.

Supply Data
- 25-kg-PE-bags on pallet
- Other delivery forms on request

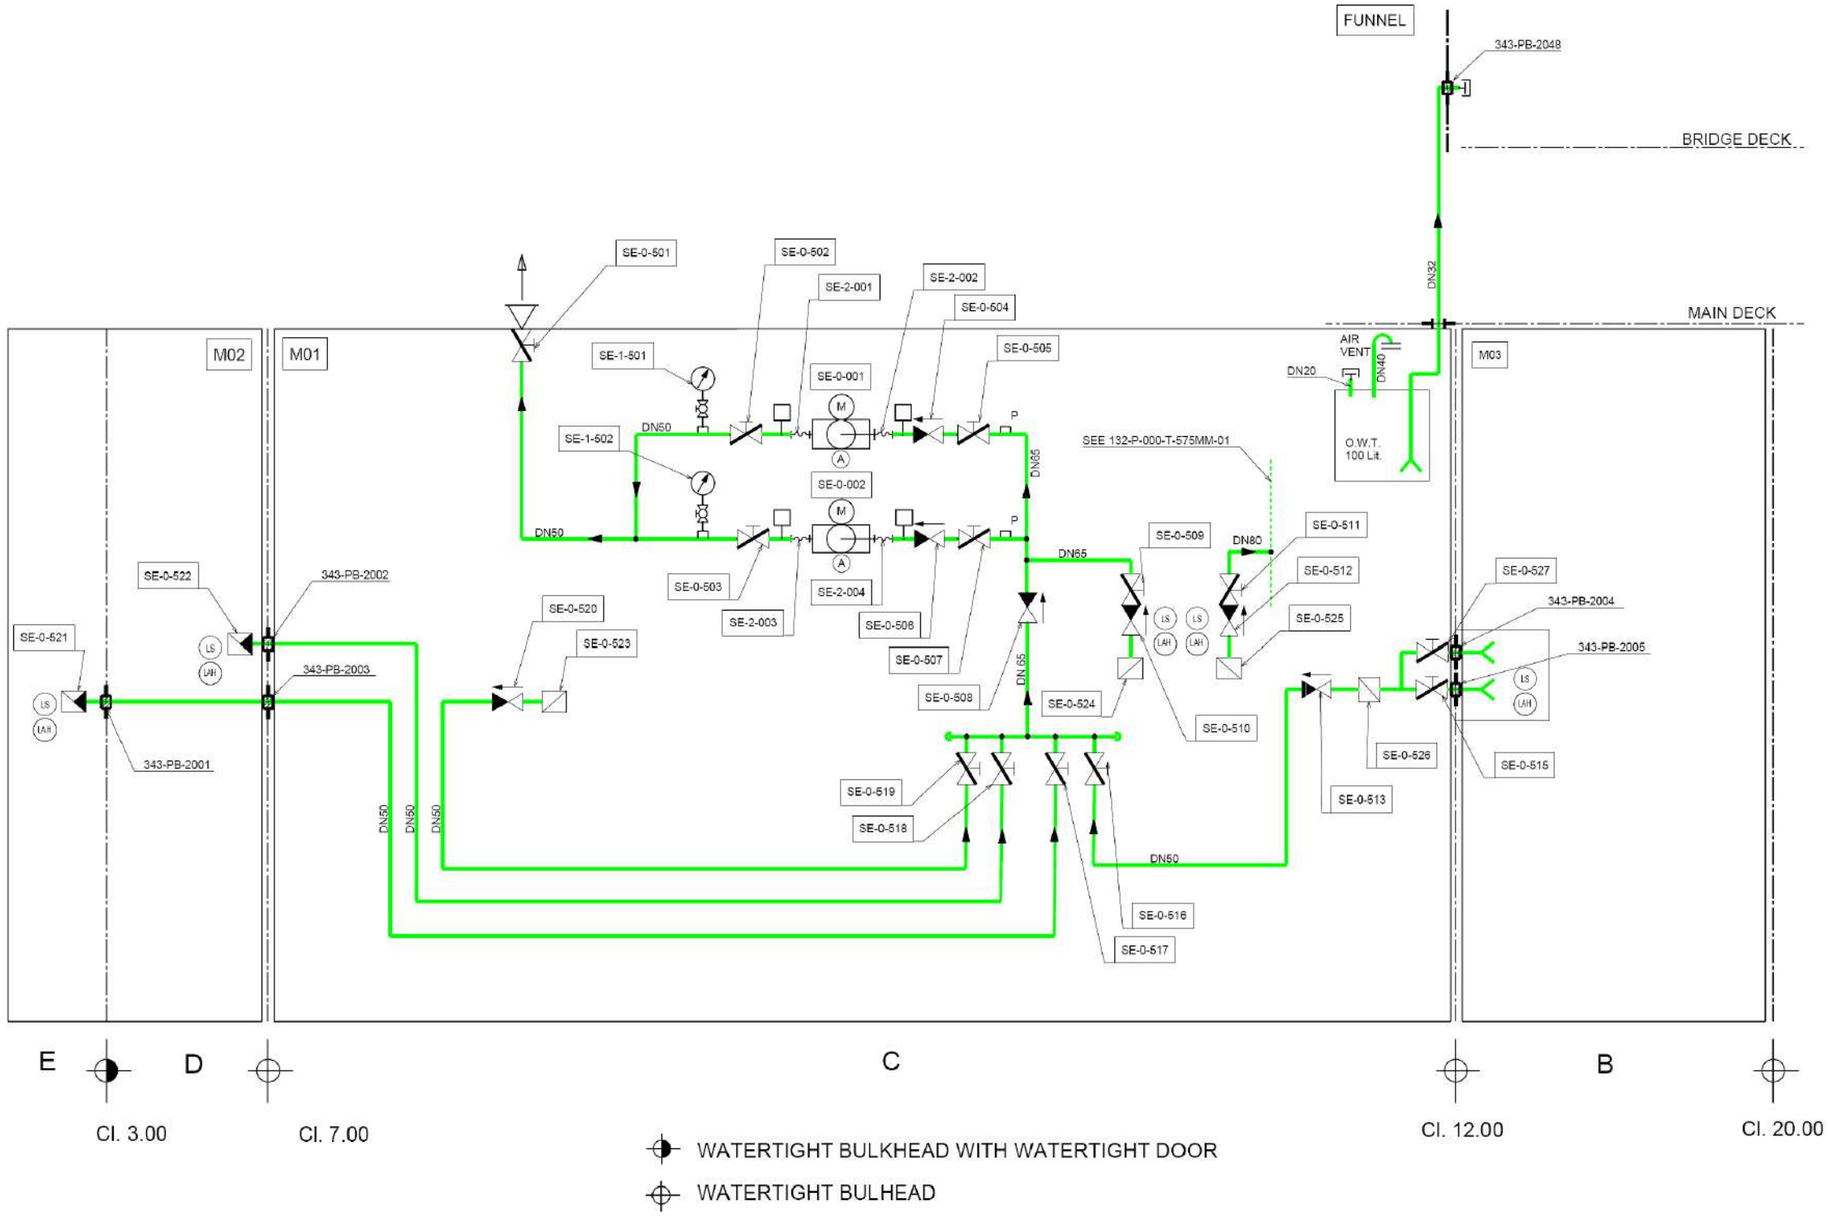
EQUIPEMENTS

- (A) FIRE PUMP 25m3/h-30m
- (B) HAND PUMP (JAPY) 2.7m3/h
- (C) PUMP UNIT [ELECTRO-PUMP (2m3/h-25m)]

APPLIANCES SYMBOLS FOLLOWING CMN STANDARD

- ELECTRO PUMP
- BUTTERFLY VALVE
- BALL VALVE
- NONRETURN VALVE
- HYDRANT
- FLEXIBLE HOSE OR COMPENSATOR
- REDUCER
- P BOSS FOR PRESSURE GAUGE
- PRESSURE GAUGE
- PIPE GOING DOWNWARDS
- PIPE GOING UPWARDS
- ANODE
- WATERTIGHT PENETRATION
- NONWATERTIGHT PENETRATION

Figure 7-9 Firemain System



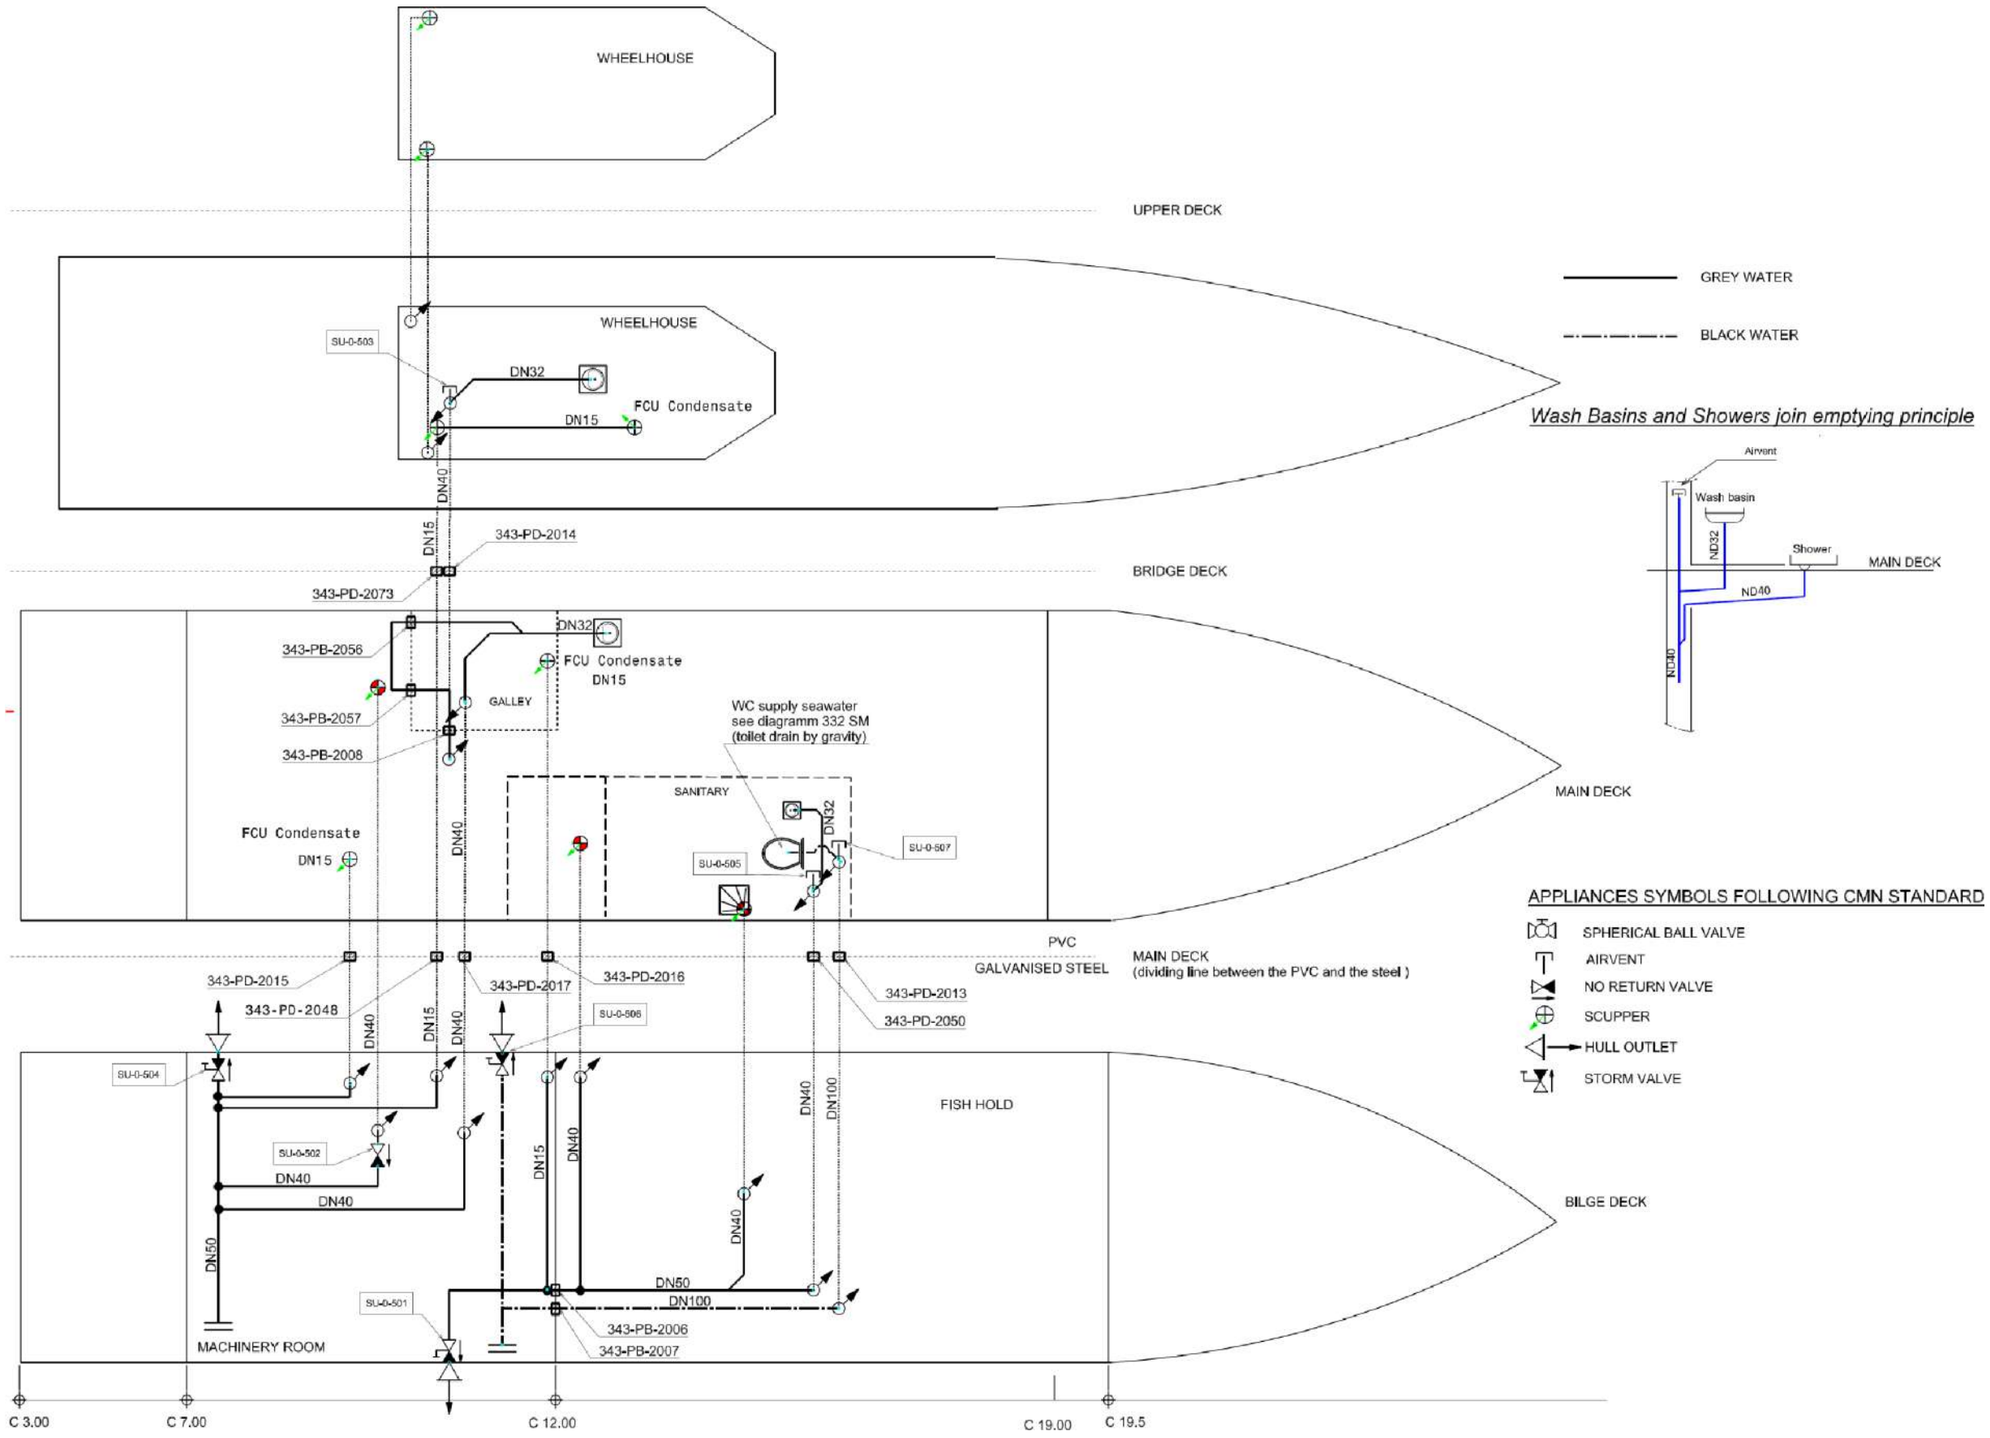
APPLIANCES SYMBOLS FOLLOWING CMN STANDARD

- ELECTRO PUMP
- BUTTERFLY VALVE
- NON-RETURN VALVE
- NO RETURN STRUM BOX
- MUD BOX
- FLEXIBLE HOSE OR COMPENSATOR
- COUPLING PIPE
- BOSS FOR PRESSURE GAUGE
- PRESSURE GAUGE
- HULL OUT GOING
- PIPE GOING DOWNWARDS
- PIPE GOING UPWARDS
- LEVEL SWITCH
- LEVEL ALARM HIGH
- PARE-FLAMME

EQUIPMENTS

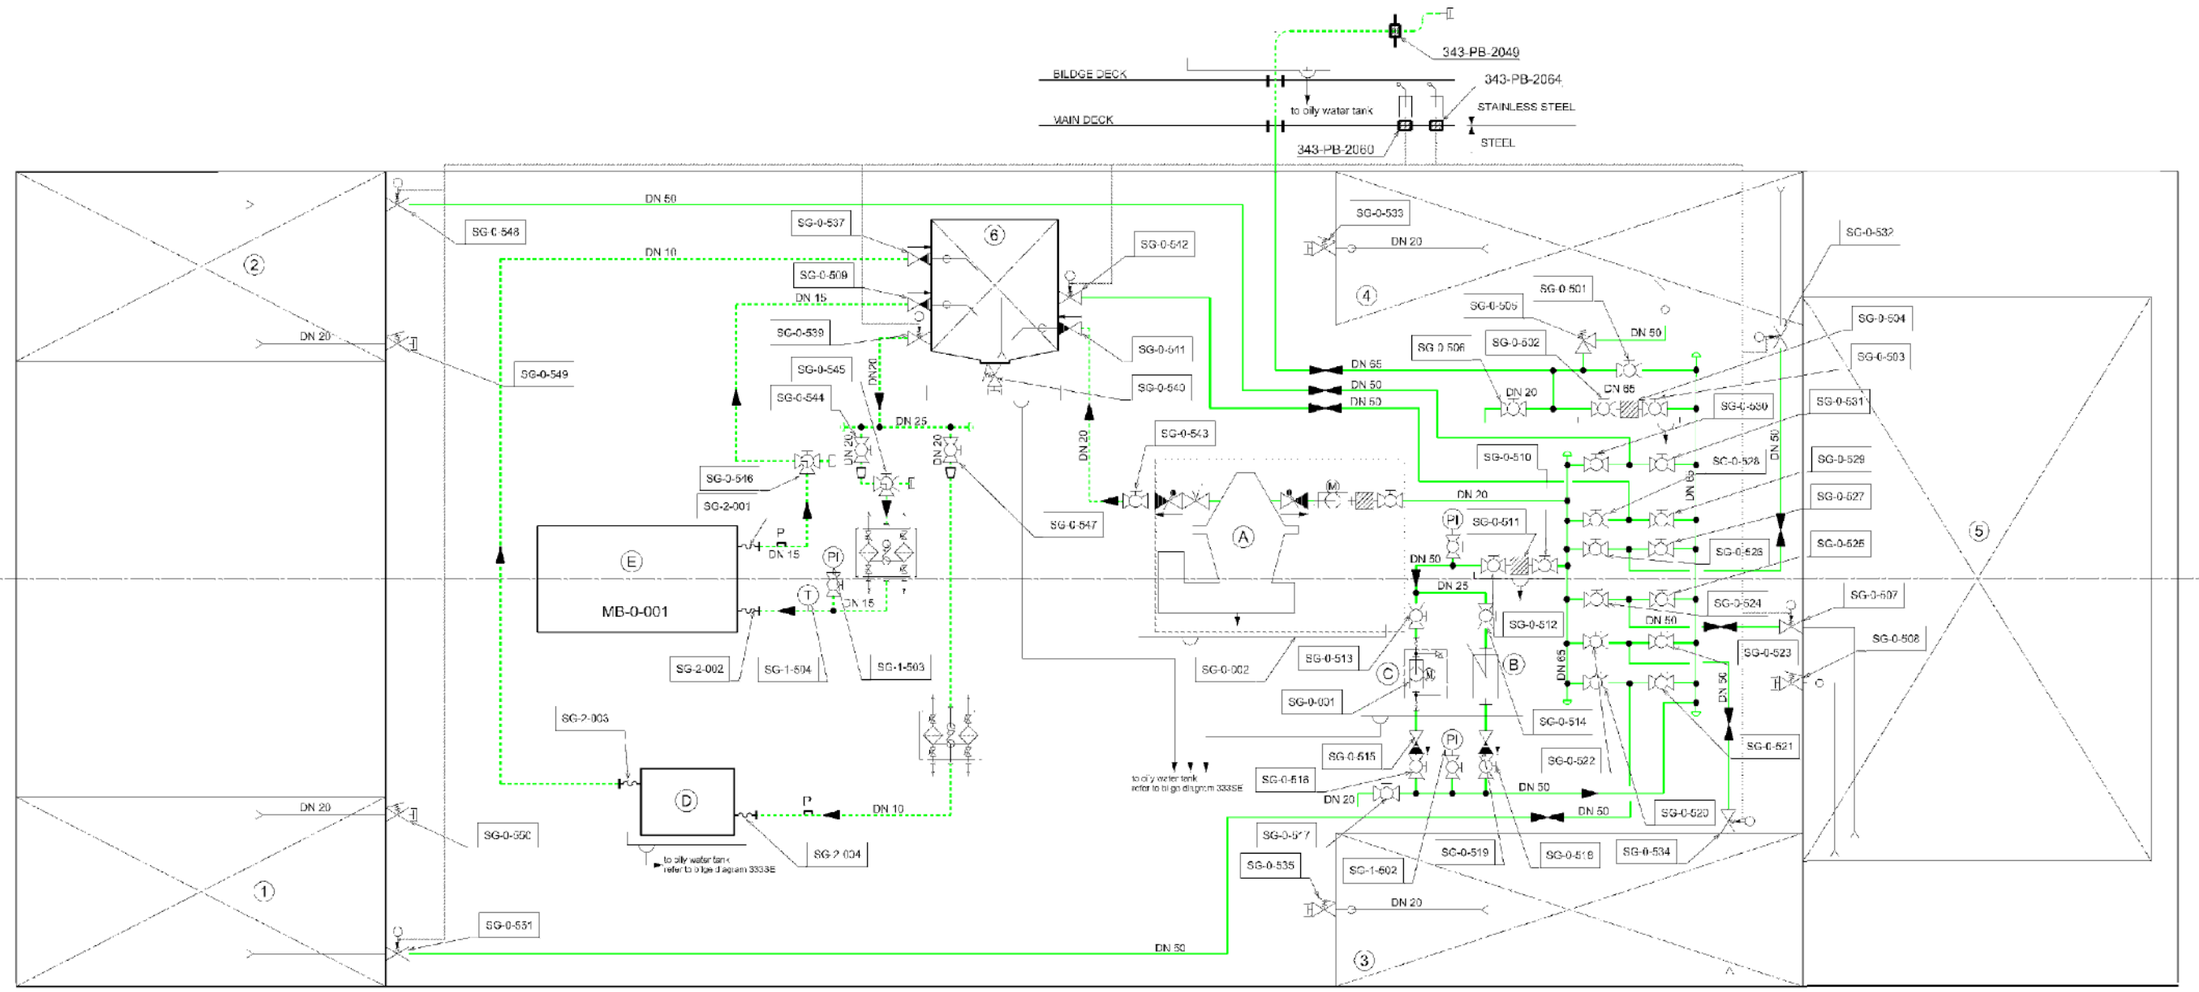
(A) ELECTRO- PUMP 15m3/h-20m

Figure 7-10 Bilge System



Doc. Title	Ship Information Handbook	CMN	201 / 226
Doc. Reference	23,3 m Trawler		
Doc. Revision & Date	A - 15/09/14		

Figure 7-11 Sewage System



EQUIPMENT :

- (A) SEPARATOR 0.8 m3/h
- (B) HAND-PUMP 2 m3/h
- (C) TRANSFER ELECTRO-PUMP DE 10m3/h
- (D) GENERATOR SET
- (E) MAIN ENGINE

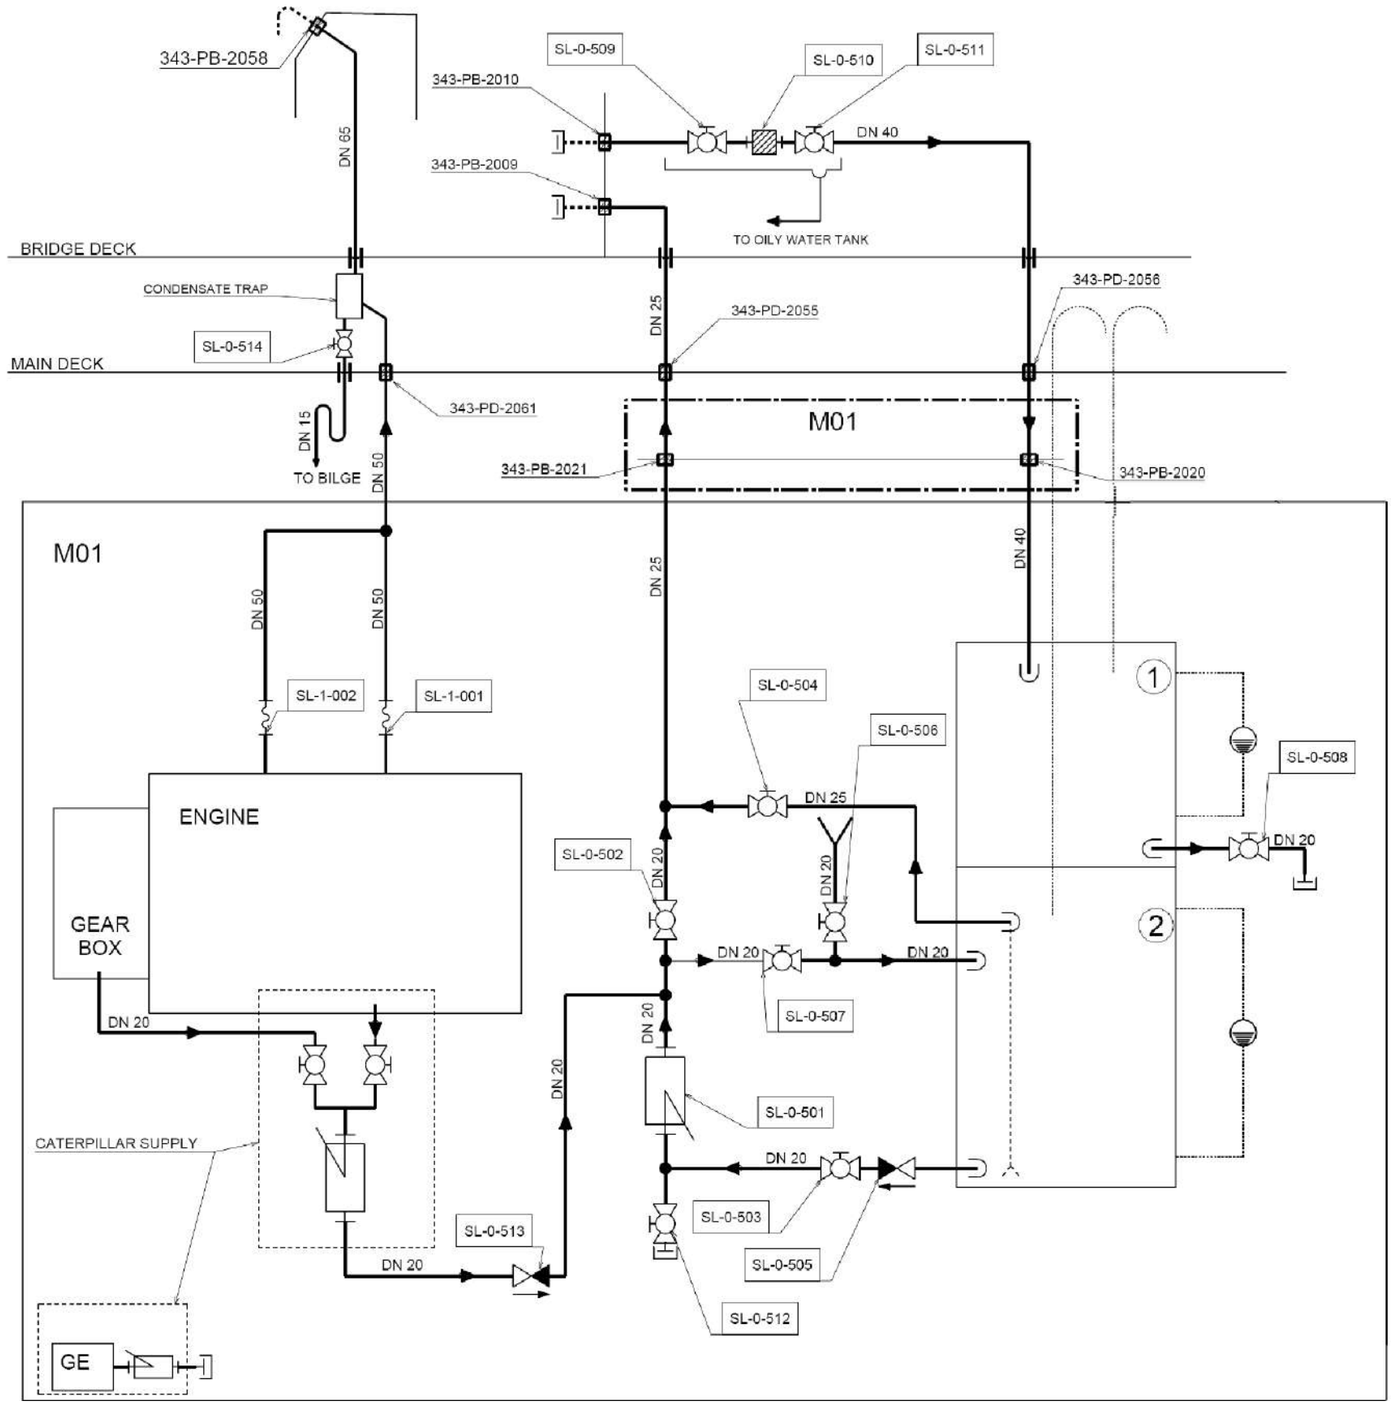
TANKS :

- (1) *FUEL-OIL STORAGE TANK*
- (2) *FUEL-OIL STORAGE TANK*
- (3) *FUEL-OIL STORAGE/OVERFLOW TANK*
- (4) *FUEL-OIL STORAGE/OVERFLOW TANK*
- (5) *FUEL-OIL STORAGE TANK*
- (6) *FUEL-OIL SERVICE TANK*

APPLIANCES SYMBOLS FOLLOWING CMN STANDARD

- *SPHERICAL BALL VALVE*
- *NO RETURN VALVE*
- *BUTTERFLY VALVE*
- *FLEXIBLE HOSE OR COMPENSATOR*
- *GLOBE VALVE SELF CLOSING*
- *PIPE COUPLING*
- *FILTER*
- *ELECTROPUMP*
- *ANGLE RELIEF VALVE*
- *HYDRAULIC ACTUATOR*
- *PRESSURE GAUGE*
- *HYDRAULIC CONTROLE QUICK CLOSING VALVE*
- *HAND PUMP*

Figure 7-12 Marine Fuel Oil System



APPLIANCES SYMBOLS FOLLOWING CMN STANDARD

- *SPHERICAL BALL VALVE*
- *NO RETURN VALVE*
- *FLEXIBLE HOSE OR COMPENSATOR*
- *GLOBE VALVE SELF CLOSING*
- *PIPE COUPLING*
- *HAND PUMP*
- *FILTER*

PIPE FOLLOWING STANDARDS:
STEEL NFA 49-112
STAINLESS STEEL (316L) NFA 49-117

···· *STAINLESS STEEL*
— *STEEL*

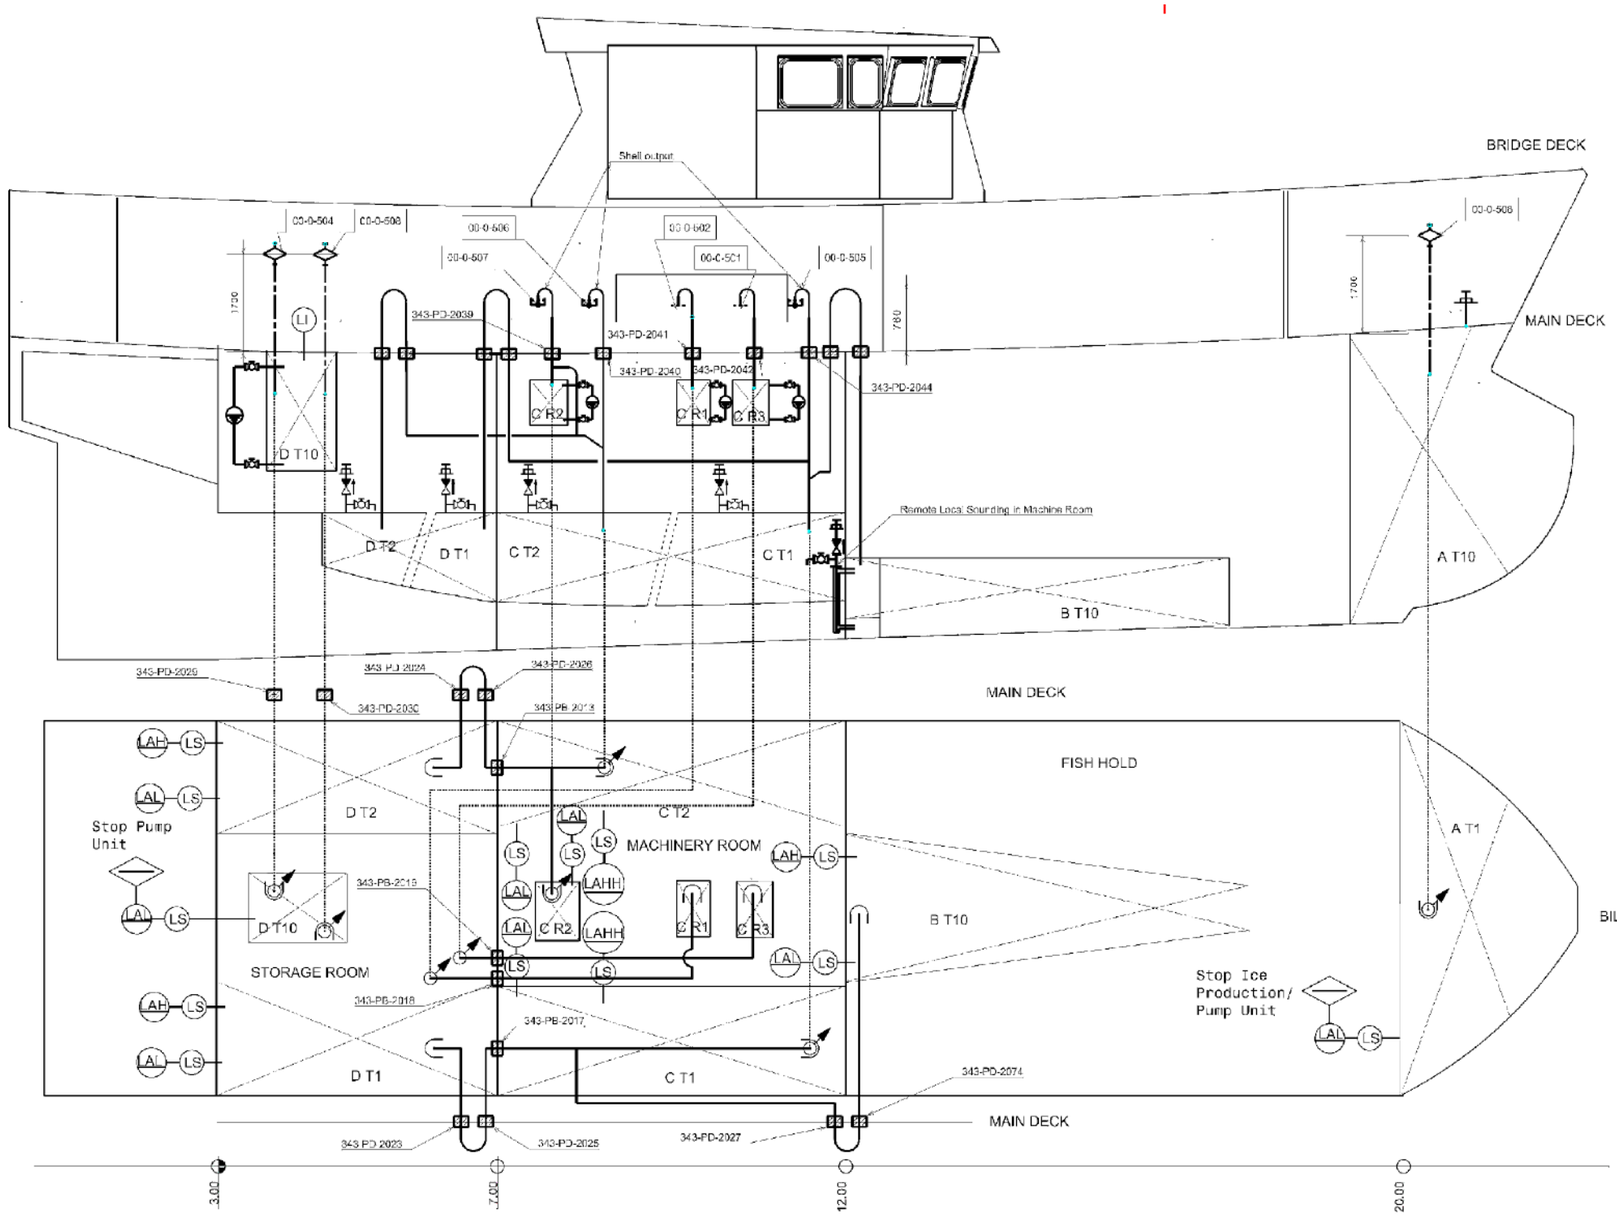
TANKS :

(1) *NEW OIL TANK*
(2) *POLLUTED OIL TANK*

EQUIPMENT :

(A) HAND-PUMP 1.3 m³/h

Figure 7-13 Lubricating Oil System



REP	Description	Net CAPACITY
	Unit	m3
A T10	Fresh Water Tank	13.6
B T10	Fuel Oil storage Tank	8.50
C T1	Fuel Oil storage/overflow Tank	11.00
C T2	Fuel Oil storage/overflow Tank	11.00
D T10	Fresh Water Tank	3.00
D T1	Fuel Oil storage Tank	3.30
D T2	Fuel Oil storage Tank	3.30
C R1	New Oil Tank	0.7
C R2	Fuel Oil service Tank	1
C R3	Polluted Oil Tank	0.3

APPLIANCES SYMBOLS FOLLOWING CMN STANDARD

- NO RETURN VALVE
- ASSEPTIC FILTER
- PIPE GOING UPWARDS
- PIPE GOING DOWNWARDS
- AIR VENT WITH AUTOMATIC CLOSING DEVICE AND FLAME ARRESTER
- AIR VALVE WITH AUTOMATIC CLOSING DEVICE
- AIR VALVE WITH FLAME ARRESTER
- LOCAL SOUNDING WITH SELF CLOSING TYPE APPLIANCE AND CHECK VALVE
- LOCAL SOUNDING
- LAHH — LEVEL ALARM VERY HIGH: 97% TANK CAPACITY
- LAH — LEVEL ALARM HIGH: 90% TANK CAPACITY
- LAL — LEVEL ALARM LOW: 30% TANK CAPACITY
- LS — LEVEL SWITCH
- LI — LEVEL INDICATOR
- LEVEL INDICATOR
- INTERLOCK
- Steel Pipes
- Stainless Steel Pipes

TESTING

FUNCTION TESTS
1. OPERATION OF ALARM INDICATION
2. RELIEF VALVE SETTING (FACTORY TEST CERT)
3. OPERATION OF VENTILATION SHUT DOWN

HYDROSTATIC PRESSURE TESTS

CLOSED SECTION PIPEWORK – 128 BAR
OPEN ENDED PIPEWORK – 7 BAR

IN THE EVENT OF FIRE:–

SEQUENCE OF OPERATION :–

1. OPEN CO2 ROOM DOOR. ALARMS WILL BE ACTIVATED IN THE SPACE AND VENTILATION SHUTDOWN ENABLED.
2. ENSURE ALL PERSONNEL ARE CLEAR OF AFFECTED AREA.
3. OPEN CO2 ISOLATION VALVE REF 16.
4. PROCEED TO PILOT CO2 CYLINDER 1.
   REMOVE PIN AND PULL LEVER SHARPLY ON TOP OF CYLINDER.

CO2 DISCHARGED

DO NOT RE–ENTER AREA UNTIL SAFETY OFFICER HAS CERTIFIED AREA SAFE
